Person(s) who presented rebuttal:	None
-----------------------------------	------

MOVED by Reeve Henn that the public hearing for item E-1 be closed at 9:57 a.m.

Carried

Email submissions in support: Jay German, on behalf of Ronmor Holdings
Peter Allen
Dustin Rusnack
Blair Rusnack
Travis Rusnack

Email submissions in opposition: Gary Sutherland
Al Merlo

Person(s) who presented rebuttal: None

MOVED by Councillor Schule that the public hearing for item E-2 be closed at 11:52 a.m.

Carried

The Chair called for a recess at 11:58 a.m. and called the meeting back to order at 1:00 p.m. with all previously mentioned members present.

Main Motion:

MOVED by Councillor Schule that further consideration of Bylaw C-8172-2021 be referred to Administration for further dialog with the City of Calgary on matters including:

- Cost and revenue sharing options;
- Potential amendments to the Rocky View County / City of Calgary Intermunicipal Development Plan; and
- Joint planning endeavors including a potential joint planning area;

AND THAT Administration report back to Council within six months.

Amending Motion:

MOVED by Councillor Gautreau that the main motion be amended as follows:

THAT further consideration of Bylaw C-8172-2021 be referred to Administration for further dialog with the City of Calgary on matters including:

- Cost and revenue sharing options;
- Potential amendments to the Rocky View County / City of Calgary Intermunicipal Development Plan; and
- Joint planning endeavors including a potential joint planning area;

AND THAT Administration report back to Council **by the September 14, 2021 Council meeting** ~~within six months.~~

Carried

The Chair called for a recess at 1:17 p.m. and called the meeting back to order at 1:20 p.m. with all previously mentioned members present.

Amending Motion:

MOVED by Councillor Boehlke that the main motion be further amended as follows:

THAT further consideration of Bylaw C-8172-2021 be referred to Administration for further dialog with the City of Calgary on matters including:

- Cost and revenue sharing options;
- Potential amendments to the Rocky View County / City of Calgary Intermunicipal Development Plan; and
- Joint planning endeavors including a potential joint planning area;
- Rocky View County supports non-residential development in principle and also is supportive of collaborative planning with our neighbours to this end;

AND THAT Administration report back to Council by the September 14, 2021 Council meeting.

Carried

The Chair called for a vote on the main motion as amended:

Main Motion as Amended:

MOVED by Councillor Schule that further consideration of Bylaw C-8172-2021 be referred to Administration for further dialog with the City of Calgary on matters including:

- Cost and revenue sharing options;
- Potential amendments to the Rocky View County / City of Calgary Intermunicipal Development Plan; and
- Joint planning endeavors including a potential joint planning area;
- Rocky View County supports non-residential development in principle and also is supportive of collaborative planning with our neighbours to this end;

AND THAT Administration report back by the September 14, 2021 Council meeting.

Carried

F-1 Division 4 - Langdon Library Project
File: N/A

MOVED by Deputy Reeve McKylor that the June 29, 2021 Council Meeting be adjourned at 3:00 p.m.

Carried

Reeve or Deputy Reeve

Chief Administrative Officer or Designate

PLANNING AND DEVELOPMENT SERVICES

TO: Council
DATE: July 13, 2021 **DIVISION:** 7
TIME: Morning Appointment
FILE: 06404005 **APPLICATION:** PL20200179
SUBJECT: Redesignation Item – Agricultural, General District to Direct Control District 131

APPLICATION: To redesignate the subject lands from Agricultural General (A-GEN) District to Direct Control District 131 (DC-131) to accommodate industrial activities.

GENERAL LOCATION: Located on the north border of the city of Calgary approximately 0.41 kilometres (1/2 mile) east of Highway 2 and 1.6 kilometres (1 mile) south of Township Road 261.

LAND USE DESIGNATION: Agricultural, General District

EXECUTIVE SUMMARY: Council gave first reading to Bylaw C-8147-2021 on March 9, 2021. The application is consistent with the relevant policies of the County Plan, Land Use Bylaw, Rocky View/Calgary Intermunicipal Development Plan (IDP), The Balzac East Area Structure Plan (ASP), and Nose Creek Business Park Conceptual Scheme (CS).

ADMINISTRATION RECOMMENDATION: Administration recommends approval in accordance with Option #1.

OPTIONS

Option #1: Motion #1 THAT Bylaw C-8147-2021 be amended in accordance with Appendix C.
 Motion #2 THAT Bylaw C-8147-2021 be given second reading as amended.
 Motion #3 THAT Bylaw C-8147-2021 be given third and final reading as amended.
 Option #2: THAT application PL20200179 be refused

AIR PHOTO & DEVELOPMENT CONTEXT:

Administration Resources

Scott Thompson, Planning and Development Services

APPLICATION EVALUATION:

The application was evaluated based on the technical reports submitted with the application and the applicable policies and regulations.

APPLICABLE POLICY AND REGULATIONS:	TECHNICAL REPORTS SUBMITTED:
<ul style="list-style-type: none"> • <i>Municipal Government Act</i>; • Municipal Development Plan; • Land Use Bylaw; • Rocky View/Calgary IDP; • Balzac East ASP; • Nose Creek Business Park CS; and • County Servicing Standards. 	<ul style="list-style-type: none"> • None

POLICY ANALYSIS:

Interim Growth Policies

The application generally aligns with the Interim Growth Policies through providing employment growth, that makes use of existing and planned infrastructure.

County Plan

The County Plan identifies the subject parcel as forming part of a Regional Business Center. The purpose of these areas is to provide large areas of commercial and industrial development. The proposed land use redesignation to Direct Control District 131 aligns by creating more industrial lands aligning with the County Plan.

Balzac East ASP

The application aligns with the policies that are within the Balzac East ASP. The subject parcel is within the *South Business Area* within the plan. This area intends to provide industrial uses that utilize the existing highway corridor and rail infrastructure. The proposal meets the requirements of the ASP.

Nose Creek Business Park CS

The application aligns with the policies of Nose Creek Business Park CS. The subject parcel is located within Cell 4, which is intended to be used for industrial purposes. The proposed application is to provide new industrial space that would utilize existing infrastructure and services. It is the intent to provide access to the site using the road structure that is within the CS. Servicing and stormwater will be assessed at the development permit stage, however, there is existing infrastructure within the Nose Creek Business Park. It is expected that this parcel will connect to the existing infrastructure.

Land Use Bylaw

The application proposes to use Bylaw C-6721-2008 (Direct Control District Bylaw 131) which aligns with the Land Use Bylaw C-8000-2020 and is consistent with the surrounding area.

ROCKY VIEW COUNTY

Respectfully submitted,

Concurrence,

"Brock Beach"

"Kent Robinson"

Acting Executive Director
Community Development Services

Acting Chief Administrative Officer

If the recommendations of the Traffic Impact Assessment require additional improvements to the existing roadway and intersection network, then the Development Agreement shall address these improvements.

AGENCY	COMMENTS
	<ul style="list-style-type: none"> The subject lands are expected to gain access from within the Nose Creek Business Park; not from 144th Avenue. Access will be defined at a future development stage. At the time of future subdivision and/or development permit, if site construction activities require the import or export of soil, the applicant shall enter into a Road Use Agreement with the County regarding the use of the County's road system to haul soil off-site or onto the site. At the time of future subdivision and/or development permit, The owner is to provide payment of the Transportation Off-Site Levy (including the Base Levy and the Special Area Levy) in accordance with the Transportation Off-Site Bylaw. <p>Sanitary/Waste Water:</p> <ul style="list-style-type: none"> At the time of future subdivision and/or development permit, services will be obtained from the East Balzac Sanitary Collection System. A detailed sanitary servicing study is required to support offsite improvements related to the development. The study shall confirm the servicing capacity required for the development of the proposed parcel. At the time of future subdivision and/or development permit, the applicant shall submit a detailed site wastewater servicing design that will tie into the East Rocky View Wastewater Collection System. <p>Water Supply And Waterworks:</p> <ul style="list-style-type: none"> At the time of future subdivision and/or development permit, the applicant shall submit a detailed potable water servicing and hydraulic design study to ensure the pipelines are sized adequately considering existing and future phases. The study shall confirm servicing requirements for this phase are in place and include provisions for fire protection in accordance with County's Servicing Standards. At the time of future subdivision and/or development permit, the applicant shall submit a detailed site water servicing design, including adequate fire protection, for the proposed development in accordance with the County Servicing Standards, County Bylaws as amended, that will tie into the East Rocky View Potable Water System. The design shall address the need for a pressure-reducing valve and backflow preventer and if required. <p>Storm Water Management:</p> <ul style="list-style-type: none"> At the time of future subdivision and/or development permit, the applicant shall submit a site-specific stormwater implementation plan for the subject lands and provide for any necessary easements and right-of-ways for drainage in accordance with the Nose Creek Watershed Water Management Plan. At the time of future subdivision and/or development permit, the applicant shall submit a sediment and erosion control plan and report in accordance with County Servicing Standards.

AGENCY	COMMENTS
	<p>Environmental:</p> <ul style="list-style-type: none"> There no wetland noted on the subject site, however, the applicant remains responsible for securing any approvals related to Provincial and Federal environmental regulations or legislation.
Recreation, Parks, and Community Support	Thank you for the opportunity to review the above-noted application. At this time, RPCS has no comment on the proposed redesignation, further considerations will be provided at the subdivision or development permit stage.
Utility Services	This application considers the extension of the current municipal water and wastewater infrastructure to service the proposed lot. Therefore, Utility Services has nothing further to add to this circulation.

ROCKY VIEW COUNTY

BYLAW C-8147-2021

A bylaw of Rocky View County, in the Province of Alberta, to amend Rocky View County Bylaw C-8000-2020, being the *Land Use Bylaw*.

The Council of Rocky View County enacts as follows:

Title

1 This bylaw may be cited as *Bylaw C-8147-2021*.

Definitions

2 Words in this Bylaw have the same meaning as those set out in the *Land Use Bylaw* and *Municipal Government Act* except for the definitions provided below:

- (1) **“Council”** means the duly elected Council of Rocky View County;
- (2) **“Land Use Bylaw”** means Rocky View County Bylaw C-8000-2020, being the *Land Use Bylaw*, as amended or replaced from time to time;
- (3) **“Municipal Government Act”** means the *Municipal Government Act*, RSA 2000, c M-26, as amended or replaced from time to time; and
- (4) **“Rocky View County”** means Rocky View County as a municipal corporation and the geographical area within its jurisdictional boundaries, as the context requires.

Effect

- 3 THAT Schedule B, Land Use Map ~~64-South~~, of Bylaw C-8000-2020 be amended by redesignating a portion within SE-04-26-29-W04M is hereby redesignated from Agricultural, General District (A-GEN) to Direct Control District 131 (DC-131) as shown on the attached Schedule 'A' forming part of this Bylaw.
- 4 THAT a portion within SE-04-26-29-W04M is hereby redesignated from Agricultural, General District (A-GEN) to Direct Control District 131 (DC-131) as shown on the attached Schedule "A" forming part of this Bylaw.
- 5 That Schedule D, Direct Control District Map, of Bylaw C-6941-2010 be amended by redesignated a portion within SE-04-26-29-W04M is hereby redesignated to Direct Control District 131 (DC-131) as shown on attached Schedule 'A' forming part of this bylaw.
- 6 That Schedule E, Direct Control District Map, of Bylaw C-6941-2010 be amended by redesignated a portion within SE-04-26-29-W04M is hereby redesignated to Direct Control District 131 (DC-131) Cell 4 as shown on attached Schedule 'A' forming part of this bylaw.

ROCKY VIEW COUNTY

Effective Date

- 7 Bylaw C-8147-2021 is passed and comes into full force and effect when it receives third reading and is signed in accordance with the *Municipal Government Act*.

PLANNING AND DEVELOPMENT SERVICES

TO: Council
DATE: July 13, 2021 **DIVISION:** 4
TIME: Morning Appointment
FILE: 03316010 **APPLICATION:** PL20210022
SUBJECT: Redesignation Item – Agricultural Use

APPLICATION: To redesignate a portion of the land from Agricultural, General District (A-GEN) to Agricultural, Small Parcel District (A-SML), in order to facilitate the creation of a ± 54.0 acre parcel with a ± 102.0 acre remainder.

GENERAL LOCATION: Located on the east border of the city of Calgary, approximately 0.8 kilometers (0.5 miles) west of Range Road 283, and 0.8 kilometers (0.5 miles) north of Township Road 232.

LAND USE DESIGNATION: Agricultural, General District (A-GEN)

EXECUTIVE SUMMARY:

Council gave first reading to Bylaw C-8150-2021 on March 9, 2021. The proposed new lot is not suitable for the proposed development:

- The proposal for raising horses on the new ± 54.0 acres lot is considered a new and distinct agricultural use, which meets the agricultural policies of the County Plan; however, a large slough covers approximately 80% of the land, leaving approximately ± 10.0 acres of developable area, which does not meet the intent of the agricultural district, and would restrict agricultural development potential on the new lot.

ADMINISTRATION RECOMMENDATION: Administration recommends refusal as per Option #2.

OPTIONS:

- Option #1: Motion #1 THAT Bylaw C-8150-2021 be given second reading.
 Motion #2 THAT Bylaw C-8150-2021 be given third and final reading.
 Option #2: THAT application PL20210022 be refused.

Administration Resources

Xin Deng, Planning and Development Services

APPLICATION EVALUATION:

The Applicant submitted a subdivision application (PL20200128) in 2020, to create a ± 54.0 acres new lot with a ± 102.0 acres remainder. As the proposed ± 54.0 acres new lot did not have appropriate land use, Municipal Planning Commission (MPC) tabled it on January 27, 2021, until a redesignation application is submitted and approved. The Applicant has now submitted this redesignation application (PL20210022) as required.

This application was evaluated in accordance with the applicable policies and regulations.

APPLICABLE POLICY AND REGULATIONS: <ul style="list-style-type: none"> • <i>Municipal Government Act</i>; • Rocky View County / City of Calgary Intermunicipal Development Plan (IDP); • County Plan; • Land Use Bylaw (LUB); and • County Servicing Standards. 	TECHNICAL REPORTS SUBMITTED: <ul style="list-style-type: none"> • N/A
--	---

POLICY ANALYSIS:

Rocky View /City of Calgary IDP

The land falls within the future industrial growth area within the IDP. The IDP indicates that development in this area needs to be governed by the local planning document of the local municipality.

A proposed developer-led Shepard Industrial Area Structure Plan (ASP) covers several quarter sections south of the subject land. The final ASP is scheduled for a public hearing this summer. The subject land is not located within the ASP, and thus, this application was primarily evaluated in accordance with the County Plan.

County Plan

Section 8 Agriculture provides policies to evaluate redesignation applications from a first parcel out to the creation of a smaller agricultural parcel.

Policy 8.18 outlines criteria for evaluation of redesignation and subdivision proposals for smaller agricultural parcels. The Applicant indicated that the proposed new lot would be used for horse raising, which is considered new and distinct agricultural use. The proposed agricultural use is also compatible with adjacent agricultural lands to the north. However, the major concerns are:

- Even though the proposed new lot is ± 54.0 acres in size, the land cannot be fully utilized, as approximately 80% is covered by a slough. The water is part of the Shepard Slough Complex which provides storage for the Regional Shepard Drainage catchment. Due to this large slough, it leaves approximately ± 10.0 acres of developable area, which does not meet the intent of the agricultural district.
- Administration and the Applicant also explored the option to redesignate the new lot from agricultural use to residential use, however, that option is neither consistent with the residential policies of the County Plan nor the applicant's intention with the application.
- Should this redesignation application be approved, Administration will present the tabled subdivision application (PL20200128) back to MPC for consideration. It is noted that the existing slough separates the subject lands into two portions. Access to the northern portion of land (the ± 54.0 acres new lot) requires access from the north. Presently, Range Road 284 from Highway 560 to the subject land is an undeveloped road allowance, containing a private driveway

providing access to the oil company's well-site. As a condition of that subdivision, the Owner will be required to construct a Regional Low Volume Gravel Road within the undeveloped road allowance (approximately 1600 m) in order to provide access for the new lot. The Owner indicated that they would request MPC waive that condition, as it is cost-prohibitive for the Owner to build a road to service one agricultural lot.

Due to the limited developable area and the costs associated to build a new County gravel road, the site is not suitable for the proposed development.

Land Use Bylaw

The proposed new lot meets the minimum parcel size requirement of the Agricultural, Small Parcel District (A-SML) of the LUB. However, the net \pm 10 acres developable area does not meet the intent of the agricultural district. In addition, the limited developable area would restrict agricultural development potential on the new lot.

Respectfully submitted,

Concurrence,

ROCKY VIEW COUNTY

BYLAW C-8150-2021

A Bylaw of Rocky View County, in the Province of Alberta, to amend Rocky View County Bylaw C-8000-2020, being the *Land Use Bylaw*.

The Council of Rocky View County enacts as follows:

Title

- 1 This Bylaw may be cited as *Bylaw C-8150-2021*.

Definitions

- 2 Words in this Bylaw have the same meaning as those set out in the *Municipal Government Act* except for the definitions provided below:
- (1) **“Council”** means the duly elected Council of Rocky View County;
 - (2) **“Land Use Bylaw”** means Rocky View County Bylaw C-8000-2020, being the *Land Use Bylaw*, as amended or replaced from time to time;
 - (3) **“Municipal Government Act”** means the *Municipal Government Act*, RSA 2000, c M-26, as amended or replaced from time to time; and
 - (4) **“Rocky View County”** means Rocky View County as a municipal corporation and the geographical area within its jurisdictional boundaries, as the context requires.

Effect

- 3 THAT Schedule B, Land Use Maps, of C-8000-2020 be amended by redesignating a portion of NW-16-23-28-W04M from Agricultural, General District (A-GEN) to Agricultural, Small Parcel District (A-SML), as shown on the attached Schedule 'A' forming part of this Bylaw.
- 4 THAT a portion of NW-16-23-28-W04M is hereby redesignated to Agricultural, Small Parcel District (A-SML), as shown on the attached Schedule 'A' forming part of this Bylaw.

Effective Date

- 5 Bylaw C-8150-2021 is passed and comes into full force and effect when it receives third reading and is signed in accordance with the *Municipal Government Act*.

PLANNING AND DEVELOPMENT SERVICES

TO: Council
DATE: July 13, 2021 **DIVISION:** 4
TIME: Afternoon Appointment
FILE: 03222002/003/091 **APPLICATION:** PL20210007
SUBJECT: Redesignation Item – Residential and Special Districts

APPLICATION: To redesignate the remainder lands from Agricultural, General District (A-GEN) and Residential, Rural District (R-RUR) to Residential, Mid-Density Urban District (R-MID), Special, Parks and Recreation District (S-PRK), Special, Natural Open Space District (S-NOS), and Special, Public Service District (S-PUB), in order to facilitate future development of Painted Sky Development.

GENERAL LOCATION: Located within Langdon Area Structure Plan (ASP), approximately 0.25 miles south of Highway 560, east of Vale View Road, and north of Railway Avenue West.

LAND USE DESIGNATION: Agricultural, General District (A-GEN) and Residential, Rural District (R-RUR)

EXECUTIVE SUMMARY:

Council gave first reading to Bylaw C-8142-2021 on March 23, 2021. The proposal is consistent with the Langdon ASP, Painted Sky Conceptual Scheme (CS), and Land Use Bylaw (LUB):

- The proposal meets the applicable policies of the Langdon ASP;
- The proposed residential use and special uses for open space, environment reserve, and public utility lot are consistent with the adopted Painted Sky CS;
- The proposed parcel size meets the LUB.

ADMINISTRATION RECOMMENDATION: Administration recommends approval as per Option #1.

OPTIONS:

Option #1: Motion #1 THAT Bylaw C-8142-2021 be given second reading.
 Motion #2 THAT Bylaw C-8142-2021 be given third and final reading.
 Option #2: THAT application PL20210007 be refused.

AIR PHOTO & DEVELOPMENT CONTEXT:

Administration Resources

Xin Deng, Planning and Development Services

APPLICATION EVALUATION:

The Applicant submitted the Painted Sky CS application (PL20160107) and Redesignation application (PL20160108) in order to redesignate the lands for the entire plan in 2016.

The applications were approved in 2017; however, Council restricted the Land Use approval to Phase 1. The purpose of this application is to redesignate the remaining lands within the Painted Sky CS.

The application was evaluated based on the technical reports submitted with the original application and the applicable policies and regulations.

<p>APPLICABLE POLICY AND REGULATIONS:</p> <ul style="list-style-type: none"> • <i>Municipal Government Act;</i> • Langdon ASP; • Painted Sky CS; and • Land Use Bylaw. 	<p>TECHNICAL REPORTS SUBMITTED:</p> <ul style="list-style-type: none"> • Environmental Site Assessment (Base Property Consultants, March 28, 2006) • Geotechnical Investigation (McIntosh Lalani, July 14, 2016) • Traffic Impact Assessment (Bunt & Associates, July 28, 2016) • Staged Master Drainage Plan Pond Report (LGN Consulting Engineering Ltd. July 2016) • Biophysical Impact Assessment and Wetland Impact Assessment (Ecotone Environmental, September 2016) • Water Use Assessment (CIMA, September 21, 2016) • Wastewater Use Assessment (CIMA, September 21, 2016) • An updated Traffic Impact Assessment for Painted Sky Phase 1 (Bunt & Associates, September 23, 2019)
---	--

POLICY ANALYSIS:

Langdon ASP

The proposed land uses are consistent with the Langdon ASP.

- The proposed residential development is consistent with the land use identified on Maps 5 and 6. The proposed residential district supports a variety of housing types, lot sizes, and lot widths, which meet the objectives of a residential development of the Langdon ASP.
- The proposal provides opportunities for recreational and community uses through a series of neighborhood parks and pathways, which meet the applicable policies within the Langdon ASP.
- The two major wetlands that qualify as an environmental reserve are proposed to be retained and dedicated as Environmental Reserve at a future development stage.

Painted Sky CS

The proposed land uses are consistent with the adopted Painted Sky CS. Residential uses are the predominant use with dedicated municipal reserves for parks, dedicated environment reserves for wetland protection, and a public utility lot for stormwater management.

Land Use Bylaw

The proposed Residential, Mid-Density Urban District (R-MID) supports a variety of freehold residential development types. The proposed residential lots also meet the requirements of lot size and lot width of the district.

Open space, environmental reserve, and public utility are designated their respective appropriate land use districts which include Special, Parks and Recreation District (S-PRK), Special, Natural Open Space District (S-NOS), and Special, Public Service District (S-PUB). The proposed uses meet the purpose and intent of each district.

TECHNICAL CONSIDERATIONS:

Transportation

The development area would be accessible through five separate access points distributed along Vale View Road, Railway Avenue, and Brander Avenue. Traffic Impact Assessments would be required at each subdivision stage to monitor the capacity and need for off-site road and intersection improvements.

Water and Wastewater

The subject lands are located within the Langdon Waterworks Franchise Area and would connect to their distribution system. Wastewater would be collected and conveyed to a new sanitary lift station, which would convey the wastewater to the Langdon Wastewater Treatment Plant. This new lift station will be constructed as part of the first phase of the development.

Stormwater

The proposed stormwater management system would direct stormwater flow to a stormwater pond, located in the southeast portion of the plan area. Stormwater would then be pumped via force main to the existing drainage ditch along the south side of Railway Avenue eventually into Weed Lake. The stormwater pond and pumped outlet will be constructed as part of the first phase of the development.

Respectfully submitted,

Concurrence,

Notwithstanding, the information from 2016 may be outdated and may require an update to reflect current conditions. Alberta Transportation may have additional comments on a review of these documents if/when they are made available for review.</p> <p>Previous approval for subdivision and development of Phase 1 of the Painted Sky CS included intersection upgrades at Highway 560 and Vale View Road as recommended in the Painted Sky Phase 1 Transportation Impact Assessment prepared by Bunt & Associates in 2019. It is unclear as to whether this improvement will be compatible with the long-term improvements required at this intersection to satisfy further subdivision and development in the Painted Sky planning area.</p> <p>No information has been provided concerning impacts to the Highway 560 / Glenmore Trail and Highway 797 / Centre Avenue intersection. It is anticipated additional upgrades at this intersection will be required as a result of continued growth.</p> <p>No information has been provided concerning stormwater management and potential impacts to Highway 560. It appears that Highway 560 may be proposed as an integral part of the regional stormwater management solution, and clarification of this will be necessary.</p>
<i>Internal Departments</i>	
Agricultural Services	No agricultural concerns as these parcels fall within the Langdon ASP.
Fire Services	<ul style="list-style-type: none"> • Please ensure that water supplies and hydrants are sufficient for firefighting purposes. Please contact the Fire Service to propose a design regarding private hydrant systems if it is required. • Dependent on the occupancies, the Fire Service recommends that the buildings be sprinklered, if applicable, as per the National Building Code. • Please ensure that access routes are compliant with the designs specified in the National Building Code and the Rocky View County Servicing Standards. • Please ensure that there is adequate access throughout all phases of development and that the access complies with the requirements of the National Building Code & NFPA 1141.

AGENCY	COMMENTS
Road Operation	<ul style="list-style-type: none"> Developer for Painted Sky Development to contact County Road Operations with haul details for materials and equipment needed during site development to confirm if a Road Use Agreement will be required for any hauling along the County road system pursuant to the County's Road Use Agreement Bylaw C-8065-2020. County roads bordering the Painted Sky Development include Vale View Road, Railway Avenue, and Township Road 233, which are gravel surfaced. Traffic generated from the Painted Sky Development may create dust issues along these roads.
Planning and Development Services - Engineering	<p>General:</p> <ul style="list-style-type: none"> As a condition of future subdivision, the applicant will be required to provide a detailed landscaping plan for all open space and recreational areas associated with each proposed phase of development to the satisfaction of the County's Municipal Lands department. As a condition of future subdivision, the applicant shall be responsible to dedicate all necessary easements and ROWs for utility line assignments and provide for the installation of all underground shallow utilities and street lighting with all necessary utility providers to the satisfaction of the County At this time, the application shall be circulated to the County's Solid Waste and Recycling team to determine if there are any additional requirements or impacts to the existing curbside waste and recycling pickup services provided by the County As a condition of future subdivision, the applicant is required to submit a Construction Management Plan with each proposed phase of the development to the satisfaction of the County. <p>Geotechnical:</p> <ul style="list-style-type: none"> The applicant provided a Geotechnical investigation for the proposed development prepared by McIntosh Lalani dated July 2016. The investigation concludes that the subject lands have generally favorable soil and groundwater conditions to support the proposed development however, the areas of the development designated multi-family and commercial will required site-specific geotechnical investigations at the time of development At the time of the detailed design, the applicant will be required to implement the recommendations made in the Geotechnical Investigation prepared by McIntosh Lalani dated July 2016 or conduct further geotechnical work for incorporation into the detailed design of the development as deemed necessary by the County. <p>Transportation:</p> <ul style="list-style-type: none"> The applicant provided a Traffic Impact Assessment (TIA) for the proposed development prepared by Bunt & Associates dated July 2016. An updated TIA for Painted Sky Phase 1 was provided with the subdivision application PL20190052.

AGENCY	COMMENTS
	<ul style="list-style-type: none"> At the time of the future subdivision for the next applicable phase, the applicant will be required to submit an updated TIA indicating the off-site improvements required to be implemented with the applicable phase of the development. If offsite improvements are required to be implemented to support the applicable phase, the applicant will be required to enter into a Development Agreement with the County for the implementation of the necessary upgrades and be eligible to receive cost recoveries for any oversizing allowed in the infrastructure. As a condition of future subdivision, the applicant may be required to pay cost recoveries for the upgrades to offsite infrastructure providing direct benefit to the proposed. As a condition of future subdivision, the applicant will be required to dedicate additional ROW along Railway Avenue and Valeview Road in accordance with the findings of the TIA, the Langdon Transportation Network Analysis, and the Transportation off-site levy bylaw as amended. It is to be noted that the Langdon Transportation Network Analysis calls for a 30m wide ROW for Valeview Road and 27m ROW for Railway Ave. The current width of both Valeview Road and Railway Ave is 20m. As the subject lands are adjacent to Highway 560 and impacts/proposes improvements to the provincial highway network (Highway 560 & 797), the TIA was circulated to AT for their review and comment in 2017. AT provided a response stating they had no concerns with the TIA and accepted its findings and recommendations for the proposed development and impacts to the municipal and provincial road network (intersection of Highway 797 and Glenmore Trail). As a condition of future subdivision, the applicant will be required to obtain a Roadside DP from AT for the implementation of any improvements to the provincial highway network. As a condition of future subdivision, the applicant will be required to enter into a Development Agreement with the County for the construction of the internal road network including all related infrastructure (sidewalks, curb & gutters, etc.) and all other offsite improvements identified in the TIA in accordance with the requirements of the County's Servicing Standards. As a condition of future subdivision, the applicant is required to provide payment of the Transportation Off-Site Levy, in accordance with the applicable levy at the time of the subdivision approval, for the total gross acreage of the lands proposed to be subdivided and developed. It is to be noted that the applicant shall be responsible for any offsite ROW acquisitions (if required) to support the proposed development. <p>Sanitary/Waste Water:</p> <ul style="list-style-type: none"> As per the CS, the sanitary collection system within the development will collect and convey wastewater to a new sanitary lift station to be located at the SE corner of the subject lands. From here, wastewater will be pumped

AGENCY	COMMENTS
	<p>south to the existing East Rocky View Wastewater Transmission Line which conveys wastewater directly to the Langdon Wastewater Treatment Plant. This lift station and associated force main are scheduled to be constructed as part of the first phase of the development under file PL20190052.</p> <ul style="list-style-type: none"> • The County is currently in the process of performing a partial upgrade to the Langdon Wastewater Treatment Plant to allow for additional wastewater servicing capacity for developments in East Rocky View. • As a condition of future subdivision, the applicant will be required to provide engineering drawings, prepared by a qualified professional, and enter into a Development Agreement with the County for the construction of the proposed wastewater collection to tie into the Painted Sky lift station. • As a condition of future subdivision, the applicant will be required to provide payment of the Wastewater Off-Site Levy in accordance with the applicable levy at the time of the Subdivision approval, for the treatment of the wastewater to be created by the proposed development and for the use of the East Rocky View Wastewater Transmission Line. • It is to be noted that the applicant shall be responsible for any ROW acquisitions and easements required to service the proposed development. As a condition of future subdivision, the applicant will be required to secure all necessary easements and ROWs for all proposed wastewater infrastructure. • The applicant may be eligible to receive cost recoveries if any oversizing or allowance for future tie-in is made in the proposed lift station. <p>Water Supply And Waterworks:</p> <ul style="list-style-type: none"> • As per the CS, the applicant is proposing to tie to the Langdon Waterworks water distribution network located to the east and south of the subject lands. Water will initially be provided from the west end of Brander Ave with a second connection point proposed at Railway Ave to loop the system to instill sufficient flow volumes. • As per the Hamlet of Langdon Infrastructure report prepared for Langdon Waterworks in April of 2014, upgrades to the water systems have been identified at various population targets for the Hamlet. As per the CS, the anticipated population of the proposed development at full build-out is approx. 4000 people (the existing population of the Hamlet is approx. 4900 people). At the time of the future subdivision of the applicable phase of the development, the applicant will be required to confirm the availability of water capacity to adequately service the proposed phase. • As a condition of future subdivision, the applicant will be required to provide engineering drawings, prepared by a qualified professional, and enter into a Development Agreement with the County for the construction of the water distribution system within the proposed phase of the development. • It is to be noted that the applicant shall be responsible for any ROW acquisitions and easements required to service the proposed development.

AGENCY	COMMENTS
	<p>As a condition of future subdivision, the applicant will be required to secure all necessary easements and ROWs for all proposed potable water infrastructure</p> <p>Storm Water Management:</p> <ul style="list-style-type: none"> As part of the CS, the applicant provided a Staged Master Drainage Plan Pond Report prepared by LGN Consulting Engineering Ltd. dated July 2016. The proposed stormwater management concept for this development consists of a minor system collecting and conveying stormwater to a wet pond at the southeast corner of the subject lands. Water levels in the pond shall be controlled via a lift station pumping water to the Railway Ave ditch. The applicant is planning to construct the stormwater pond and offsite stormwater conveyance infrastructure as part of Painted Sky Subdivision Phase 1. As a condition of future subdivision, the applicant will be required to provide payment of the stormwater levy, in accordance with the applicable levy at the time of the Subdivision approval, for improvements to the local (Hamlet) and regional (CSMI) drainage network. As a condition of future subdivision, the applicant will be required to provide an updated stormwater management plan (SWMP) and design drawings for the proposed stormwater management system and all related infrastructure in accordance with the requirements of the Langdon Comprehensive Stormwater Review, the County's Servicing Standards, Alberta Environment regulations, and best practices. As a condition of future subdivision, the applicant will be required to enter into a Development Agreement with the County for the construction of the proposed stormwater system and all related infrastructure. It is to be noted that all proposed stormwater infrastructure is required to be constructed on a PUL. As a condition of future subdivision, the applicant will be required to provide verification of AEP approvals and registration (EPEA) for the stormwater system. As a condition of future subdivision, the applicant will be required to prepare an erosion and sediment control (ESC) plan, prepared by a qualified professional, identifying ESC measures to be taken during construction and to protect the onsite wetlands and municipal infrastructure. As a condition of future subdivision, the applicant will be required to secure all necessary easements and ROWs for all proposed stormwater ponds, escape routes, and all other related infrastructure. <p>Environmental:</p> <ul style="list-style-type: none"> As part of the CS, the applicant provided a Biophysical Impact Assessment (BIA) and Wetland Impact Assessment prepared by Ecotone Environmental dated September 2016. At the time of the future subdivision, the applicant may be required to provide updates to the reports as deemed necessary by the County or AEP.

ROCKY VIEW COUNTY

AGENCY**COMMENTS**

- As per the BIA and the Staged Master Drainage Plan Pond Report provided with the application, the subject lands contain numerous wetlands of varying classification. The applicant has obtained *Water Act* Approvals for disturbance to the wetland areas as part of PRDP20172364.

Circulation date: February 4, 2021 – February 26, 2021

Agencies that did not respond, expressed no concerns, or were not required for distribution, are not listed.

ROCKY VIEW COUNTY

BYLAW C-8142-2021

A Bylaw of Rocky View County, in the Province of Alberta, to amend Rocky View County Bylaw C-8000-2020, being the *Land Use Bylaw*.

The Council of Rocky View County enacts as follows:

Title

- 1 This Bylaw may be cited as *Bylaw C-8142-2021*.

Definitions

- 2 Words in this Bylaw have the same meaning as those set out in the *Municipal Government Act* except for the definitions provided below:
- (1) **“Council”** means the duly elected Council of Rocky View County;
 - (2) **“Land Use Bylaw”** means Rocky View County Bylaw C-8000-2020, being the *Land Use Bylaw*, as amended or replaced from time to time;
 - (3) **“Municipal Government Act”** means the *Municipal Government Act*, RSA 2000, c M-26, as amended or replaced from time to time; and
 - (4) **“Rocky View County”** means Rocky View County as a municipal corporation and the geographical area within its jurisdictional boundaries, as the context requires.

Effect

- 3 THAT Schedule B, Land Use Map, of C-8000-2020 be amended by redesignating a portion of NW 22-23-27-W4M & SW 22-23-27-W4M from Agricultural, General District (A-GEN) and Residential, Rural District (R-RUR) to Residential, Mid-Density Urban District (R-MID), Special, Parks and Recreation District (S-PRK), Special, Natural Open Space District (S-NOS), and Special, Public Service District (S-PUB), as shown on the attached Schedule 'A' forming part of this Bylaw.
- 4 THAT a portion of NW 22-23-27-W4M & SW 22-23-27-W4M is hereby redesignated to Residential, Mid-Density Urban District (R-MID), Special, Parks and Recreation District (S-PRK), Special, Natural Open Space District (S-NOS), and Special, Public Service District (S-PUB), as shown on the attached Schedule 'A' forming part of this Bylaw.

Effective Date

- 5 Bylaw C-8142-2021 is passed and comes into full force and effect when it receives third reading and is signed in accordance with the *Municipal Government Act*.

PLANNING AND DEVELOPMENT SERVICES

TO: Council
DATE: July 13, 2021
FILE: 06731002 / 06731004
SUBJECT: Development Permit: Natural Resource Extraction/Processing /
Listed Direct Control Use, with Variances

DIVISION: 9
APPLICATION: PRDP20211744

APPLICATION: Natural Resource Extraction/Processing (Phase 1).

GENERAL LOCATION: Located at the southeast junction of Highway 567 and Range Road 40.

LAND USE DESIGNATION: Direct Control District 170 [Bylaw C-8051-2020] (DC 170)

EXECUTIVE SUMMARY: This Development Permit application is for the commencement of Phase 1 Natural Resource extraction (gravel pit and operations), for the Summit Pit.

Phase 1 is located within the south-eastern portion of the property, adjacent to the Habitat Preservation Area. Open mining and excavation areas will not exceed ± 16.18 hectares (± 40.00 acres) in area at any given time. The proposal is for a six (6) phase mining plan. On-site operations are proposed to include stripping of topsoil & overburden materials, mining of the underlying sand and gravel, and eventual reclamation of all disturbed areas. The sand and gravel excavated within the site will be crushed, screened, and shipped to the surrounding rural area and metropolitan areas.

The Applicant is required to upgrade the intersection of Highway 567 and Range Road 40 to a Type IVa standard and also upgrade a portion of Range Road 40 to an industrial paved standard. These improvements will be completed through the Development Agreement process.

There is no enforcement history on the subject property. Once commenced, the site is expected to remain operational for 40 years. Site reclamation will commence in accordance with the approved reclamation plan and Provincial requirements. The proposed extraction areas remain consistent with the overlying policy regulations and phasing plan. Registration with Alberta Environment & Parks (AEP), in accordance with the requirements of the Code of Practice for Pits, is required to be obtained, prior to the commencement of extraction activities.

As the application aligns with the Master Site Development Plan: Mountain Ash Summit Aggregate Pit (Summit Pit MSDP) and DC 170, Administration is supportive of the application.

If Council should decide to proceed with Option #2, reasons for refusal will need to be provided.

ADMINISTRATION RECOMMENDATION: Administration recommends approval in accordance with Option #1.

OPTIONS:

Option #1: THAT Development Permit No. PRDP20211744 be approved with the conditions noted in Attachment 'A'.

Option #2: THAT Development Permit No. PRDP20211744 be refused as per the reasons noted (as determined by Council).

Option #3: THAT alternative direction be provided.

POLICY CONSIDERATIONS:

County Plan (CP)

Section 15 of the CP supports aggregate extraction with the adoption of a master site development plan and land use regulations. A master site development plan (MSDP) needs to be in accordance with Section 29 of the CP. The Summit Pit MSDP was prepared and approved by Rocky View County Council on March 2, 2021.

Summit Pit MSDP

The MSDP provides a comprehensive policy and technical framework for natural resource extraction, processing, and all related development activities. The MSDP includes policies related to noise mitigation, air quality considerations, stormwater management, groundwater management, visual aspects, post-mining reclamation, traffic impacts, and joint area commitments.

DC 170

DC 170 requires that Council be the Development Authority for the issuance of all Development Permits. The purpose and intent of this zoning are to accommodate a comprehensively planned Natural Resource Extraction/Processing operation, as contemplated by the MSDP.

It provides the regulations and requirements concerning the development of Natural Resource Processing on the subject lands. All required technical submissions made to support the application have been submitted and reviewed by Administration. Overall, the application is consistent with the regulations of DC 170 and aligns with its purpose and intent providing for the extraction, processing, stockpiling, and export of aggregate materials from the subject lands.

ADDITIONAL REVIEW CONSIDERATIONS

The lands are located in an area of the County that is primarily agricultural in nature; however, there are three (3) other sites in the vicinity zoned to support active and future natural resource extraction activities. Of the three sites, one active development permit has been issued, to allow for extraction activities (1189677 Alberta Ltd: Hillstone Aggregates).

As part of the visual screening plan, a berm is proposed along Highway 567, to be constructed as part of a future phase. As Phase I is quite far from the highway (southern end of the site) and operations will not be visible to motorists, the highway frontage berm will not be built as part of this phase. A temporary perimeter berm, located immediately east of the Phase 1 boundary area will be constructed as part of this phase. Any classified water body, located throughout the property, shall also include screening and protection perimeter berms.

CONCLUSION:

Subject to the proposed conditions of approval, the application is recommended for approval.

Respectfully submitted,

Concurrence,

“Brock Beach”

“Kent Robinson”

Acting Executive Director
Community Development Services

Acting Chief Administrative Officer

JT/ltt

ATTACHMENTS:

ATTACHMENT ‘A’: Development Permit Report Conditions

ATTACHMENT ‘B’: Maps & Other Information

ATTACHMENT ‘C’: Application Referrals

ATTACHMENT ‘D’: Public Submissions

ATTACHMENT 'A': DEVELOPMENT PERMIT REPORT CONDITIONS**Description:**

1. That Natural Resource Extraction/Processing (Phase 1) may operate on the subject site as approved in accordance with the *Master Site Development Plan: The Summit Pit, dated December 7, 2020* (MSDP), submitted application and supporting technical reports, and includes:
 - i. Field-testing facilities, including up to two temporary portable crushers;
 - ii. Portable Scale House, located on conjoining trailers (up to 2,690.98 sq. ft. in area);
 - iii. Portable Field Office/Maintenance building(s), (up to 2,690.98 sq. ft. in area);
 - iv. Outdoor Storage Area, as per the approved Mining & Extraction Plan, as prepared by SLR, Proj. No. 212.06650.00006, dated April 2021;
 - v. Temporary Stockpiling (of mineral and non-mineral materials);
 - vi. Signage; installation of three (3) freestanding signs;
 - a. That the minimum freestanding signage setback requirement from a roadway intersection is relaxed from 25.00 m (82.02 ft.) to 5.00 m (16.40 ft.).
 - b. Final signage details shall be submitted to the County, prior to installation on site.

Prior to Release:

2. That prior to release of this Development Permit, the Owner shall be required to enter into a Development Agreement with the County, in accordance with the County's Servicing Standards, for:
 - i. The upgrade of Range Road 40 to an industrial paved standard (400.6) from Highway 567 to the site access;
 - ii. Upgrade of the intersection of Range Road 40 and Highway 567 to a Type IVa standard including all signage and any other roadside indicators to the satisfaction of Alberta Transportation (AT) and the County;
 - iii. Obtaining Roadside Development Permit and other necessary approvals from AT for the Highway Intersection improvements;
 - iv. Removal and reclamation of the existing access from Highway 567 to the satisfaction of AT;
 - v. Registration of necessary easement, right-of-ways, and/or restrictive covenants to the satisfaction of the AT and the County;
 - vi. Submission and implementation of the recommendations of the geotechnical report and pavement structure design;
 - vii. Submission and implementation of the recommendations of the stormwater management report for the intersection and road upgrades;
 - viii. Submission and implementation of the recommendations of the construction management plan; and
 - ix. Submission and implementation of the recommendations of the erosion & sedimentation control plan.

3. That prior to release of this Development Permit, the Applicant/Owner shall submit payment of the Transportation Offsite Levy, in accordance with Transportation Offsite Levy Bylaw C-8007-2020, for the total gross acreage of the gravel pit and areas associated for gravel extraction activities relating to Phase 1 operations.
4. That prior to release of this Development Permit, the Applicant/Owner shall submit an updated Erosion & Sedimentation Control Plan (ESC), prepared by a qualified professional in accordance with County's Servicing Standards.
5. That prior to release of this Development Permit, the Applicant/Owner shall submit an updated Stormwater Management plan and Stripping & Grading Plan, prepared by a qualified professional in accordance with County's servicing standards.
6. That prior to release of this Development Permit, the Applicant/Owner shall submit an updated Landscape plan, confirming the proposed east berm, 15.00 m (49.21 ft.) in size, to be constructed and the relocation of the southern pond and sump A to be located within the Phase 1 boundary.

Upon Implementation & Site Occupancy:

7. That upon completion, that Applicant/Owner shall submit as-built drawings of the constructed onsite stormwater management facilities, prior to the issuance of additional Phase 1 development permits.
 - i. Once received, the County shall perform an inspection of the proposed stormwater management facilities ensuring the proposed facilities were constructed as per the approved Stormwater designs.
8. That upon completion, Construction Completion Certificates shall be issued on the constructed Type IVa intersection, upgrades to Range Road 40, and all work completed under the issued Development Agreement, prior to the issuance of additional Phase 1 development permits.

Permanent:

9. That any plan, technical submission, agreement, or other matter submitted and approved as part of the subject application, PL20200031 or PL20200034, prior to release or occupancy conditions, shall be implemented and adhered to in perpetuity, including but not limited to:
 - i. That Gravel operation shall construct and implement any necessary stormwater management facilities, in accordance with the approved site Stormwater Management Plan, in perpetuity.
 - ii. That the Gravel operation shall follow the recommendations of the Biophysical Impact Assessment, prepared by SLR, Proj. No 212.06650.00003, dated January 2020, in perpetuity.
 - iii. That the Gravel operation shall follow the recommendations of the Acoustic Assessment Report, prepared by SLR, Proj. No. 203.50207.00000, dated May 2020, and the Air Quality Assessment, prepared by SLR, Proj. No. 203.50207.00000, dated May 21, 2020 (including ongoing air quality monitoring detailing), in perpetuity.
10. The site shall operate in accordance with the Summit Pit MSDP, including the Joint Commitments, at all times.
11. That all activity and equipment associated with the Natural Processing Extraction operation shall be located within the approved Phase area only.

12. That phase reclamation shall proceed behind extraction activities such that no more than 16.00 hectares (40.00 acres) shall be open at any time for Phase 1.
13. That there shall not be any storage of any materials or vehicles on the property that are not directly related to the operation of the gravel pit.
14. That no activity shall occur within the Habitat Preservation Area, located on SW-31-26-W5M, as identified under the Summit Pit MSDP, Figure 7, Development Concept.
15. That all portable buildings placed onsite shall comply with the minimum DC 170 setback requirements.
16. That all signage shall be kept in a safe, clean, and tidy condition at all times.
17. That any on-site wayfinding signage including for direction and information purposes shall be permitted, where in keeping with the design of the overall development, to the satisfaction of the County.
18. That no business temporary signage shall be place on the site at any time except any temporary signs required during development construction. No temporary signage shall be placed within the Highway Road Allowance at any time.
19. That no crushing, within Phase 1, shall occur within the restricted crushing buffer area, as identified on the Summit Pit Site Plan, as prepared by SLR, Proj. No. 21206650.00006, dated April 23, 2021, or as amended.
20. That only on-site extraction materials may be processed on-site, except on occasion whereby blend materials from off-site are required to bring products to specification.
21. That any gravel extraction and processing operation shall occur 1.00 m (3.28 ft.) above the highest recorded groundwater table, as approved with the updated groundwater table readings and includes:
 - i. That the Applicant/Owner shall implement or continue to implement a groundwater measurement program, for which the Applicant/Owner is to install piezometers within the open pit area to take monthly readings of the groundwater levels. The readings will ensure mining activities remain a minimum of 1.00 m (3.28 ft.) above the recorded groundwater levels at all times. The Applicant/Owner shall be required to keep a log to record the readings and submit any reporting to the County, upon request, and include the log in the Annual Reports.
 - a. That should any extraction operations negatively impact groundwater on adjacent parcels, further groundwater testing and corrective recommendations may be required, upon request from the County, at the Applicant/Owner's expense.
22. That no topsoil shall be removed from the site and any soil materials will be salvaged in accordance with industry best practice to ensure their conservation.
23. That all topsoil & overburden excavated within the site may be stockpiled to be used to reclaim the excavated areas. Stockpiled topsoil & overburden will be placed in the depleted areas in the same order they were removed in accordance with the Code of Practice for Pits in Alberta.
 - i. Reclamation of mined areas shall consist of the replacement of salvaged overburden, subsoil, and topsoil with a 3:1 side slope around the mined areas.
24. That any overburdened stockpiles and/or similar earthworks shall be seeded and maintained using erosion control measures.

25. That all landscaping, including the perimeter berming along the east property line, shall be installed onsite within 24 months of permit approval, in accordance with the final approved Landscape Plan, as amended.
26. That dust control measures shall be utilized for all vehicles during mining and transport of material, and shall be applied to haul and access roads so that no visible dust is allowed on adjacent lands from the site.
27. That in the case of any spillage of hazardous materials, AEP and the County shall be notified immediately, and the appropriate clean-up procedures shall be implemented.
28. That the hours of operation, for any Natural Resource Extraction/Processing activities, shall be limited to the following:
 - i. Monday to Friday: 7:00 a.m. to 7:00 p.m.
 - ii. Saturday: 7:00 a.m. to 5:00 p.m.
 - iii. Sunday & Statutory Holidays: Closed
29. That recorded noise levels generated by aggregate operations shall not exceed *65 dba LAeq (one (1) hour)* at the receptors' location, in accordance with the approved Noise Monitoring Plan, as prepared by SLR, Proj. No. 212.06650.00006, dated April 2021 and the Acoustic Assessment Report, as prepared by SLR, Proj. No. 203.50207.00000, dated May 2020.
30. That the existing dwelling units and accessory buildings onsite shall remain deemed non-conforming, under the Direct Control District and may remain as is, until otherwise significantly altered, relocated, removed or phase extraction activities are within 150.00 m (492.13 ft.). At that time, the units shall be brought into compliance with the Direct Control District.
31. That all on-site lighting, including private, site security, and parking area lighting, shall be designed to conserve energy, reduce glare, and reduce uplight. All lighting shall be full cut-off (shielded) and be located and arranged so that no direct rays of light are directed at any adjoining properties, which may interfere with the use and enjoyment of neighbouring lands, or interfere with the effectiveness of any traffic control devices or the vision/safety of motorists.
32. That the Applicant/Owner shall submit an Annual Report to the County, that includes all pertinent operation details, no later than six months after each operating year.
 - i. The report shall include but not be limited to Site Operations Manager contact information, site complaints/incident reports, groundwater elevations, all required monitoring summaries, all extraction details (tonnages and gradation exported, volumes of stockpiled onsite material), and onsite procedure updates.
33. That if this development permit is not issued by **MARCH 31, 2022**, or the approved extension date, then this approval is null and void and the development permit shall not be issued.
34. That this Development Permit, if and when issued, shall be valid for **five (5) years** from the date of issue or until the completion of Phase 1.

Advisory:

35. The Applicant/Owner shall submit payment of the Community Aggregate Payment Levy, annually, in accordance with Bylaw C-7748-2018, as amended, in the amount of \$0.40 per ton of aggregate extracted and removed.
36. That the County's Noise Bylaw C-8067-2020 shall be adhered to at all times, except as noted or approved as conditions of this approval.

37. That at renewal stage of Phase 1, the Applicant/Owner shall, in conjunction with the other gravel pit operators in the area, work collaboratively by sharing technical information and proportionally funding, if necessary to establish and implement operating practices with an objective of mitigating cumulative effects relative to the site operation, in accordance with the Summit MSDP.
38. That a Building Permit(s) shall be obtained for any proposed buildings on-site through Building Services, prior to placement on-site.
39. That the site shall remain free of restricted and noxious weeds and maintained in accordance with the approved Weed Management submissions and the *Alberta Weed Control Act* [Statutes of Alberta, 2008 Chapter W-5.1, December 2017].
40. That any other Federal, Provincial or Municipal approvals, regulations, or policies are the sole responsibility of the Applicant/Owner.
 - i. That an AEP Registration for Pit Operation and any approvals under the *Water Act* for any Wetland Disturbances shall be obtained, prior to extraction activity commencement.
 - ii. That the Applicant/Owner shall operate within the requirements of the Provincial Code of Practice for Pits at all times.
 - iii. That the Applicant/Owner shall submit confirmation that authorization and clearance have been obtained under the *Historical Resources Act*, for the onsite mining activities located on SW-31-26-03-W5M.
 - iv. That the Applicant/Owner shall submit a copy to the County, of the Pit Registration and any other Activity Plan Registrations from AEP and a copy of the issued Roadside Development Permit (RSDP029840-1) from AT.
41. That the Applicant/Owner shall maintain the existing access/approach, off Highway 567, to the required standard, until the intersection upgrade is complete and the existing access is reclaimed.
42. That no water shall be used for washing of gravel unless and until written approval has been received from AEP. If washing is approved by AEP, the washing of gravel shall adhere to the approved days and hours of operation condition on the Development Permit.
43. That no wash water shall be discharged off of the site or into any water channel.
44. That all sanitary sewage and water services shall be supplied in accordance with AEP and the *Alberta Safety Codes Act*.
45. That any fire suppression and abatement measures shall be followed in accordance with the Alberta Fire Code.

PUBLIC & AGENCY SUBMISSIONS:

The application was circulated to 49 adjacent landowners. To date, 14 letters were received in opposition to the application and five letters were received in support of the application.

In addition, two petitions were received:

- A signed petition was received, with 13 properties noted; however, it does not provide guidance for support or opposition of the application. It has been included within the agenda package for reference. All responses have been included in Attachment 'D.'
- A online petition was received, with 9,847 names noted, including location within the world and date added, expressing opposition of the application. It has been included within the agenda package for reference and has been included in Attachment "D".

The application was also circulated to a number of internal and external agencies and, where appropriate, conditions of approval have been proposed based on these comments.

SPECIFIC SITE PLAN REQUIREMENTS

Required on the Site Plan in addition to DP Checklist - General requirements (select if provided):

- ☒ Show sign location/setbacks in relation to property boundaries and buildings
- ☐ Distance from sign to another similar/distinct sign if present on site (indicate all sign types)
- ☒ Distance from sign to overhead power and service lines, and/or road right of ways (as applicable)
- ☐ Distance from sign to highway, public roadway, and/or back of curb (as applicable)

SIGN ELEVATIONS AND DESIGN

Required in addition to DP Checklist - General requirements (select if provided):

- ☒ Minimum clearance above grade to bottom of sign (for awing/canopy, billboard, and projecting signs)
- ☒ Dimensions of sign projection from structure, building, or vehicles (as applicable)
- ☒ Design samples/digital sketches including sign content, structure, dimensions etc.
- ☐ Type of sign construction and finishing to be utilized
- ☐ Photographs of the proposed site showing adjacent properties and signs within approximately 30.0 m (98.43 ft.) of the proposed sign location
- ☐ Photographs of site and structure(s)/building(s) identifying proposed sign location
- ☐ Details of illuminated or digital signs (*For digital signage, Signage - Digital Displays Information Sheet to be completed in accordance with Section 212 of the Land Use Bylaw*)

Refer to Section 92(r) of the Land Use Bylaw C-8000-2020 for signs not requiring a development permit.

Refer to Signage regulations under Sections 151-153 and 212-224 for sign specific requirements.

Hi Jacqueline

We have been contacted by Tige Brady from Mountain Ash Limited Partnership's Summit Pit Project.

We will be entering into a Good Neighbour Agreement with the company to monitor the groundwater for our two wells on our 70 acres on 35108 Big Hill Springs Road.

If you have any question for me, please email or call my cell.

Thanks, Inger Stoneman

MALP ENGAGEMENT SUMMARY**June 2021 Update**

Mountain Ash Limited Partnership ("MALP") implemented a public engagement approach for the Development Permit ("DP") process for its Summit Pit Project in March 2021. The objective of the approach has been to work with the local community to address questions, concerns, or comments related to the DP. A primary component of the engagement approach has been to offer landowners within an 800 m radius of the subject site the opportunity to participate in a well monitoring program administered by MALP. Five landowners have agreed to participate in the program which will result in the installation of five monitoring stations in addition to the 11 stations installed within the subject site.

Outlined below is an updated summary of engagement activities completed to date.

Date	Objective(s)	Audience(s)	Contact(s)
March 16, 2021	<p>Mailing</p> <p><i>Sent to landowners within 1,600 m of the subject site to provide an update on the project and offer the opportunity for a virtual meeting to respond to any questions or concerns.</i></p> <p><i>In addition, landowners within 800 m of the subject site were offered the opportunity to participate in a water well monitoring program administered by MALP.</i></p>	Landowners	Landowners
March 18, 2021	<p>Mailing and Email</p> <p><i>Letters were sent to all stakeholder organizations that expressed interest in the project during the public hearing held on March 2, 2021, to provide an update on the project and offer the opportunity for a virtual meeting to respond to questions and concerns. Where addresses could not be found, emails were sent instead.</i></p>	Stakeholder organizations	<ul style="list-style-type: none"> • Rocky View Forward • Rocky View Gravel Watch • Alberta Wilderness Association • Big Hill Creek Preservation Society • Canadian Parks and Wilderness Society Southern Chapter • Friends of Big Hill Springs Provincial Park

May 25, 2021	Email <i>The purpose of this email was to reiterate our offer to meet with the stakeholder to review and discuss technical information related to ground water.</i>	Stakeholder	Dr. Jon Fennell
May 26, 2021	Email <i>MALP sent a follow up email to the stakeholder to confirm his position that he does not wish to engage in discussions on the project.</i>	Stakeholder	Dr. Jon Fennell

Date	Objective(s)	Audience(s)	Contact(s)
May – June, 2021	Telephone Call and Emails <i>One phone call and multiple emails were exchanged to respond to stakeholder questions and comments relative to the project. Numerous provincial and county officials were copied on some of the emails and responses.</i>	Landowners	Aynsley and Tom Foss
June 2021	Telephone Call and Emails <i>Multiple emails were exchanged and one phone call on June 10 to follow-up on topics raised at and following a previous meeting held on May 6.</i>	Landowners	Big Hill Creek Estates Water Co-op

In addition to the engagement activities outlined above, attempts to connect with known interested stakeholders and organizations (such as Rocky View Gravel Watch, Rocky View Forward, and Dr. Jon Fennell) have also been made. Offers to meet have either been refused or unanswered. Further information and documentation to substantiate previous engagement activities is available should Rocky View County administration require it.

Also of note is a letter received from Alberta Transportation on June 17, 2021, stating there is sufficient capacity on Highway 567 to handle the anticipated additional traffic generated by our proposed development.

MALP is committed to continuing a productive dialogue with interested members of the community as the DP review process continues.

Re: Summit Pit Haul Routes Plan

WATT Consulting Group Ltd. (WATT) was retained by Mountain Ash Limited Partnership (MALP) to summarize the proposed haul routes for the newly approved Summit Gravel Pit located at NW and SW 31-26-3-W5M, at the intersection of Highway 567 and Range Road 40. Access to the site will be provided via Range Road 40. **Figure 1** illustrates the location of the site.

Figure 1: Site Context

WATT completed a Transportation Impact Assessment (TIA) in 2014 and an update to the TIA in 2020. At the time the original TIA was completed, the results indicated with an upgraded access, the traffic generated from the site would not produce any adverse effect on the existing infrastructure for opening day, 10-year and 20-year horizons. The update in 2020 confirmed that further analysis was not necessary as background volumes have not shown a significant change and the 2014 analysis and recommendations were still valid. All movements at Highway 567 and Range Road 40 at the 20-year horizon will be operating at a Level of Service (LOS) A for eastbound right/through movements, LOS A for westbound left/through movements and LOS B for northbound left/through movements.

WATT CONSULTING GROUP
To: Tige Brady
RE: Summit Pit Haul Routes Plan

April 22, 2021
Our File No: 3865.E01
Page 2 of 3

Due to the size and weight of the haul vehicles, and their acceleration and deceleration properties, the 2014 TIA recommended a Type IIa intersection be constructed for the opening day scenario, a Type IIIa for the 10-year horizon and a Type IVa for the 20-year horizon. Mountain Ash Limited Partnership has committed to constructing the ultimate Type IVa intersection upon opening day.

This Haul Route Plan contains the anticipated haul routes as determined by market demand. It has been estimated that ~60% of the truck traffic (green) will service the Airdrie, Balzac and North Calgary market, while 30% (Blue) will utilize Lochend Road or Secondary 766 to service northwest/west Calgary areas. It is estimated that only 10% (yellow) of trips generated from the Summit Pit will service Cochrane or areas north and west of the Summit Pit.

Truck configurations vary. The largest configuration is truck and quad trailer which carries approximately 36 tonnes. Other configurations include truck and pup (24 tonnes), truck and tri-pup (27 tonnes), tri-axle trailer/end-dump (29 tonnes), tandem trucks (14 tonnes), foundation slinger trucks (4 tonnes), and local pick-ups with 2 tonne dump trailers.

Through discussions with Mountain Ash Limited Partnership, the following conditions will apply:

- Hauling hours are Monday through Friday from 7am to 7pm, Saturday from 7am to 5pm, and no hauling activities on Sunday's or Statutory Holidays.
- All commercial vehicles hauling from the Summit Pit, for MALP, will be enrolled in the Alberta Sand and Gravel Association's truck registry program. All commercial vehicles hauling for MALP will be required to produce valid licence, registration, insurance, and a current/valid Commercial Vehicle Inspection Report.
- All complaints regarding driver behaviors will be investigated and dealt with in an appropriate manner. Drivers/vehicles with repeat complaints, more than two complaints, will no longer be able to deliver aggregates from the Summit Pit. All complaints and supporting documentation regarding the driver and truck will be filed and stored for future reference.
- Any incidence regarding school buses is cause for immediate suspension and has the potential for permanent termination, based on the findings contained in the investigation.
- Any incident causing death results in immediate termination.
- Incidents related to driver behavior will be investigated and reviewed. Always results in immediate suspension and may be followed by a termination.
- There will be no staging of trucks on Highway 567, RR40, or the pit. Dispatch will ensure trucks are properly spaced apart to ensure staging does not occur. Trucks that arrive early will not be loaded and told to leave.

WATT CONSULTING GROUP
To: Tige Brady
RE: Summit Pit Haul Routes Plan

April 22, 2021
Our File No: 3865.E01
Page 3 of 3

- Trucks owned, purchased, or in exclusive contract with MALP will be required to equip their truck with a GPS tracking unit so that MALP can review and reference driving related behaviors.

All trucks prior to leaving the site will ensure loose debris (sand and gravel) is removed from surfaces to prevent track out onto public roadways. Range Road 40 and the intersection will be routinely inspected for loose debris. Paved roadway surfaces containing loose debris will be cleaned/swept immediately using a skid steer equipped with a sweeping broom. Surface prior to being swept will be watered with a water truck, to ensure fine sand, silt and clay particles are removed.

Attachment 1 illustrates the haul routes, distribution of traffic and destinations.

We hope that this plan sufficiently outlines the hauling operations for the Summit Gravel Pit.

Sincerely,
WATT Consulting Group

AGENCY	COMMENTS
Alberta Transportation	<ul style="list-style-type: none"> • We are satisfied with how the applicant is going to communicate with the well owners in terms of water sampling results. The water quality of residential wells included in the water monitoring program will be assessed against The Guidelines for Canadian Drinking Water Quality and the equivalent Alberta potable groundwater guidelines. This monitoring program will commence once the development permit (DP) approval has been obtained and will continue for a period of five (5) years or until the Phase 1 DP expires. The results will be shared with individual well owners on an annual basis. Once a control limit exceedance or increasing trend is confirmed, attempts will be made to identify potential sources and remove or manage them if feasible. • We are satisfied with the monitoring, record keeping, and complaint response procedures captured in the Dust Control Plan and Air Monitoring Plan. We agree that record keeping, inspections, and oversight will ensure an effective dust mitigation program throughout the lifespan of operations at the Summit Pit. The complaint log that is kept on-site at all-time should be easily accessible upon request during a complaint investigation. • We are satisfied with where the air monitoring station will be located. Considering the east boundary of the site is downwind from the project during most of the year, and the nearest residence is located approximately 250 m to the east of the project boundary, the station will be able to capture the maximum concentration of particulate leaving the project boundary and reflect the worst-case scenario. • We are satisfied that the applicant has done an assessment on existing and future industrial emission sources and has a plan to coordinate with future applicants to reduce accumulative effects from multiple operations. <p>AHS-SHE has no concerns with the subject DP application.</p> <p>RSDP029840-1; DEVELOPMENT PERMIT REFERRAL – PRDP20211744</p> <p>Natural Resource Extraction/Processing (Phase 1) and signage (The Summit Pit)</p> <p>Highway 567; NW-31-26-3-5; SW-31-26-3-5</p> <p>In reviewing the application, the proposed development falls within the control distance of a provincial highway as outlined in the <i>Highways Development and Protection Act / Regulation</i>, and will require a roadside development permit from Alberta Transportation. The application form and instructions can be obtained from the department's website at https://www.alberta.ca/roadside-development-permits.aspx.</p>

AGENCY	COMMENTS
	<p>The department has the following additional comments on the referral:</p> <ol style="list-style-type: none"> 1. Ownership of sand and gravel resources is subject to Section 58 of the <i>Land and Property Act</i>, Chapter L-7 RSA 2000. Prior to extraction of these resources beneath a statutory road allowance or road plan, these roads must be closed and consolidated or otherwise disposed of, as outlined in Section 22 of the <i>Municipal Government Act</i>. 2. Implementation of the recommendations of the Traffic Impact Assessment will be a condition of the permit issued by Alberta Transportation, which includes reconstruction of the existing intersection to the Type IVa intersection treatment. Coordination of construction activity with proponents in the immediate vicinity is encouraged.

Agriculture & Environment Services	No agricultural concerns. The applicant will need to ensure that the Weed Management Plan is regularly updated and adhered to.
Capital Project Management	Capital Project Management does not have any projects noted in that area.
Development Compliance	Development Compliance has no comments with regard to this application at this time.
Planning and Development Services - Engineering	<p>General:</p> <ul style="list-style-type: none"> • The review of this file is based on the application submitted. These conditions/recommendations may be subject to change to ensure best practices and procedures. • As a permanent condition, the applicant shall provide payment of the Community Aggregate Payment Levy in accordance with Bylaw C-7748-2018, as amended, in the amount of \$0.40 per ton of aggregate extracted and removed. • As a permanent condition of the future DP, the applicant will be required to provide the County with the EPEA registration for the proposed pit. • The applicant provided a Dust Control Plan, prepared by SLR Consulting Ltd., dated April 2021. The dust control plan provides control measures to minimize fugitive dust for aggregate crushing and screening, transportation, roads, and wind erosion. Engineering has no concerns with this.

AGENCY	COMMENTS
	<ul style="list-style-type: none"> • The applicant provided a Construction Management Plan, prepared by Mountain Ash, dated June 14, 2021. The construction management plan provides general guidelines for construction management for on-site and off-site activities. A detailed construction management plan for the construction of the Type IVa intersection at Range Road 40 and Highway 567 and the paving of Range Road 40 will be required in accordance with Section 1100 of the County's servicing standards. A special condition will be included in a development agreement to provide a detailed construction management plan prior to construction. • The applicant provided a Good Neighboring Action Plan, prepared by Mountain Ash, dated April 2021. The good neighboring plan is prepared to address neighbor concerns and effectively mitigate any cumulative effects that may arise during operations. The good neighbor action plan provides a summary of aggregate operation within the summit pit, establishes a mechanism for ongoing communication between MALP and the surrounding residents, businesses, and stakeholder groups, and provides a means to resolve complaints or disputes arising from aggregate operations. Engineering has no concerns with this. • The applicant provided a landscaping plan, prepared by SLR Global Environmental Solutions, dated April 15, 2021. Engineering has reviewed the plan and has no concerns with it. • The applicant provided an updated Air Quality Assessment, prepared by SLR Consulting (Canada) Ltd., dated May 21, 2020. The assessment provides an air quality assessment of emissions associated with the activities and operations of the proposed aggregate development. The assessment concluded that the proposed mining operation is not expected to exceed Alberta Ambient Air Quality objectives beyond the subject lands and has a limited impact on nearby residences. • The applicant provided an Ambient Air Quality Monitoring Plan (AQMP), prepared by SLR Consulting (Canada) Ltd., dated June 2021. The AQMP is prepared to meet the objects of Alberta's Ambient Air Quality and the Canadian Council of Ministers of the Environment standards. Quarterly or annual reports will be prepared as needed. • The applicant provided an Acoustic Assessment Report, prepared by SLR Consulting (Canada) Ltd., dated May 21, 2020. The acoustic Assessment assesses the potential sound egress from the site operations in relation to the nearest noise-sensitive receptors. The assessment of predicted sound levels concluded that the Summit operations should not exceed the sound level criterion at any noise-

AGENCY	COMMENTS
	<p>sensitive receptors, with the inclusion of the proposed acoustic mitigation measures.</p> <ul style="list-style-type: none"> The applicant provided a Noise Monitoring Plan, prepared by SLR Consulting Ltd., dated April 2021. The sound monitoring plan will be implemented to ensure sound monitoring criteria are not exceeded in accordance with MSDP. A monthly monitoring report will be produced detailing the sound monitoring procedure, sound level results, weather conditions, site activities, subjective observations, comparison against monitoring criteria, and applicable action items after each survey. <p>Geotechnical:</p> <ul style="list-style-type: none"> The applicant provided a Hydrogeological Assessment Report prepared by SLR Consulting (Canada) Ltd. dated January 14, 2020. The report concludes that the mining of the aggregate resources will be extracted to a maximum of 1.0m above the maximum level of the groundwater table. No adverse net impact of development at the site on surface water or groundwater users in the vicinity is expected. The applicant provided a Groundwater Monitoring Plan, prepared by SLR Consulting Ltd., dated April 2021. The groundwater monitoring plan provides information on the groundwater flow regime at the site and adapts the basal elevation of the pit in response to observed groundwater levels. A risk management plan will be developed for this site for the control limit exceedances or increasing trends. As a part of Groundwater Monitoring, the applicant shall take monthly readings of the groundwater levels to ensure mining activities remain a minimum of 1.0 m above the recorded groundwater levels at all times. The applicant will provide the County a groundwater monitoring report annually including data summaries and an interpretation of the results with respect to the environmental performance of the site as well as any recommended changes to the monitoring program. <p>Transportation:</p> <ul style="list-style-type: none"> Access to the site will be via Range Road 40. The applicant provided a Summit Aggregate Pit TIA update, prepared by Watt Consulting Group, dated March 10, 2020. The TIA update summarizes analysis updates required for the Transportation Impact Assessment completed in 2014 for the intersection of Highway 567 and Range Road 40. As per the Summit Aggregate Pit TIA, a Type II intersection would be required upon opening day, a Type III intersection at the 10-year horizon, and a Type IVa intersection at the 20-year horizon. As per the MSDP, Mountain Ash Limited Partnership intend to construct a Type IVa intersection as a condition of Stage 1 development permit to satisfy the ultimate 20-year horizon.

AGENCY	COMMENTS
	<ul style="list-style-type: none"> • Prior to issuance of DP, the applicant will be required to enter into a Development Agreement with the County for: <ul style="list-style-type: none"> ○ The upgrade of Range Road 40 to an industrial paved standard (400.6) from Highway 567 to the site access; ○ Upgrade of the intersection of Range Road 40 and Highway 567 to a Type IVa standard including all signage and any other roadside indicators to the satisfaction of AT; ○ Obtaining Roadside Development Permit and other necessary approvals from AT for the Highway Intersection improvements; ○ Removal and reclamation of the existing access from Highway 567 to the satisfaction of AT; ○ Registration of necessary easement, right-of-ways, and/or restrictive covenants to the satisfaction of the Alberta Transpiration and the County; ○ Submission and implementation of the recommendations of the geotechnical report and pavement structure design; ○ Submission and implementation of the recommendations of the stormwater management report for the intersection and road upgrades; and ○ Submission and implementation of the recommendations of the Construction Management Plan; • The applicant submitted a Haul Routes Plan, prepared by Watt Consulting Group, dated April 22, 2021. The haul routes plan provides information pertaining to anticipated haul routes, hauling hours, enrollment with Alberta Sand and Gravel Association's truck registry program, driver's behaviors, incidences, equipping trucks with GPS unit, and removing loose debris from the local network. Engineering has no concerns with this. • Prior to issuance of DP, the applicant will be required to provide payment of the Transportation Offsite Levy, in accordance with the Transportation Off-site levy bylaw C-8007-2020, for the total gross acreage of the gravel pit and areas associated with gravel extraction activities for Phase 1. <p>Sanitary/Waste Water:</p> <ul style="list-style-type: none"> • As per the MSDP, sanitary servicing will be provided by portable facilities. • Engineering has no concerns at this time.

Re: Development Permit
Applicant: Mountain Ash Limited Partnership
Reference file number PRDP 20211744

I'm writing this letter in support of Mountain Ash Limited Partnership ("Mountain Ash") to obtain a Develop Permit for gravel extraction.

I fully support extraction of gravel in a safe and ethical manner. If Mountain Ash can operate in the same manner as Lafarge do, our community will be a better place.

I hope Rocky View County issue a Development Permit to Mountain Ash. Competition between local gravel producers would be welcome in the area.

Regards,

Redtail Holdings 2004 Ltd.

Hi Jacqueline,

I hope this email finds you well.

Below is an email I received from Jane Leeson. Jane lives adjacent, directly west of the Hillstone Gravel Pit (10-acre first parcel out in NE Corner – next to Big Hill Sheep Farm). Jane and I have been in touch on several occasions regarding sand and gravel related matters specifically located along the highway 567 corridor. Jane indicated that she already sent this email to you; however, I just wanted to ensure you received it for your/our records. I have copied Jane on this correspondence. Take care!

Best regards,

Tige Brady

Subject: Reference MALP/Summit Pit

Good Day,

I realize that I am outside the circulation area for the Summit Pit mailout, but as a nearby resident and RVC voter I would like to comment in general on the path forward to Gravel extraction in our county. Consistency in policy and development needs to be set so that all Gravel Pits are held to the same standard - a firm one to support residents, farms, the environment and yet allow reasonable respectful development.

Tige Brady has done just this - set a standard well above what I have seen and researched in our county. Mr. Brady from MALP has contacted me on several occasions to discuss the nature of their application(s) and proposed development(s). Tige/MALP has kept me informed and it is evident that the Summit Pit has exceeded the statutory requirements to operate this sand and gravel resource. Clearly, Mr. Brady will be available to address their neighbour's concerns and questions as they arise - as he has voluntarily done so in speaking with me. I am confident that the Summit Pit should and could set a much needed new standard for how gravel is developed in Rocky View County.

Thank you.

Jane Leeson

Rocky View County – Planning & Development Services

Attn: Jacqueline Targett (jtargett@rockyview.ca)

RE: Mountain Ash Limited Partnership – Development Permit application (PRDP20211744)

Dear Ms. Targett,

We understand Mountain Ash Limited Partnership (“MALP”) has applied for a development permit related to the Summit Pit, which will be discussed in council on July 13, 2021.

In December 2020 Volker Stevin Highways Ltd (“VSH”) acquired a 10-acre parcel off RR40 adjacent to the proposed development of The Summit Pit.

This letter is to confirm to Rocky View County that VSH supports this application.

We would like to mention we have had several constructive conversations with MALP and have already established a good working relationship with MALP officials.

Please contact me directly if you have any questions.

Best regards,

Marcel Rijkens
General Manager

Rocky View County, AB, T4A 0X2

Attention: Jacqueline Targett, Planning Services Department

Dear Ms. Targett:

Re: PRDP 20211744

As the owner of the neighboring parcels: SE31-26-3W5, NE30-26-3W5, and SW32-26-3W5; Tricycle Lane Ranches Ltd. had previously supported the Master Site Development Plan and redesignation to a land use supportive of gravel development which were approved by council on March 2nd this year under Application PL20200031/34.

Responsible aggregate resource extraction should be encouraged in this area to avoid sterilization of a valuable natural resource. We believe that the Summit Pit has a strong basis in scientific and thoughtful planning. We do not believe this development will have a negative impact on neighbors or the environment. As such, Tricycle Lane Ranches Ltd supports the issuance of a Development Permit on these lands.

Sincerely,

Tricycle Lane Ranches Ltd.

Scott Burns CEO

Boothby Ranches Ltd., would like to offer its formal support for the Mountain Ash Limited Partnership's application for development permit. Responsible, environmentally focused gravel extraction should not be hampered by rhetoric and misinformation from special interest groups if the due diligence and conditions set forth by the county are adhered to. As local ranchers, we are very cognizant of the possible adverse effects associated with aggregate mining, but we also see the need for responsible natural resource extraction, and are confident the regulations in place by the various levels of government are in place to ensure the protection of us as well those in proximity of the applicant's land.

Dana Boothby
President
Boothby Ranches Ltd.

Subject: [EXTERNAL] - Application of Ken Venner Gravel Pit - Ashley Brady
Date: June 1, 2021 10:31:58 AM

Do not open links or attachments unless sender and content are known.

I remain opposed to the MAPL Summit gravel mine and Application of Ken Venner Gravel Pit - Ashley Brady

Rocky View Council, in approving the Summit land use designation chose to ignore 98 % of the local landowner population. Instead they gave weighting to letter writers who do not live in the county, some hundreds of miles away.

Much of the local opposition as supported by scientific evidence and concerns raised by Alberta Parks and other interest groups was summarily ignored.

I am submitting the following as provisions to be included in the development permit in an effort to reduce the damage the mine will do to the main Big Hill Spring, the Park, downstream ecology and our enjoyment and use of our property.

Sadly due to COVID there has been many difficulties in this application process. Many view this development permit approval process as seriously flawed. We are being asked to provide comments on a development permit that has not been circulated to the affected parties. Asking for public input on such an important issue without disclosure would be inappropriate even if there were an appeal process. In this case, Rocky View Council has created a process for gravel mine development permitting that also removes the public's ability to appeal their decisions.

One of my main concerns with the mine is the risk it creates to groundwater. In Alberta, any "activity" affecting groundwater as defined under the Water Act, requires an application to and approval by Alberta Environment and Parks (AEP) under the Act. The applicant has found a specialist who claims removing meters of overburden, topsoil and gravel will not affect what is happening in the water table below. Intuitively this does not make sense. As well, clearly contradictory scientific evidence was presented at the public hearing. The reality is that any potential damage to the springs and creek can only be detected after it is impossible to mitigate the damage.

In stark contrast to its assertions that their operations will have no impact on ground water, MAPL stated in their evidence that their mine will change the recharge rate of the aquifer that sustains the Park and Creek. This is a clear recognition that they will create an impact on groundwater- an "activity" under the Act and yet have confirmed that they will not make an application for groundwater impacts. Rocky View must require that this application is made before issuing its development permit for the pit's operation.

My position is that in order to meet its legislated obligations, Rocky View Council must make an AEP groundwater approval prerequisite to Council's

consideration of the terms of any Development Permit for this mine

Also the MALP experts failed to mention that a grizzly bear frequents this area. Sadly you will have noted a fatal bear attack only a few kilometers to the north west of the proposed pit. Alberta government officials and Fish and Wildlife have recorded and radio tracking data on the sow that travels and lives in this area. If MALP could not see something as large as a bear, how can residents and park users have any confidence that they will effectively monitor for something as small as fugitive dust.

In addition to the above comments, the development permit for MAPL to operate the Summit pit must include the following provisions:

1. Create and maintain a stakeholder contact list, including Alberta Parks and all participants in this hearing process, as they individually request.
2. Provide the listed stakeholders copies of all operating reports when provided to regulatory agencies or as required by the MSDP approval.
3. Provide stakeholders base line analysis data for groundwater including:
 - introduced chemicals (calcium chloride, chloride, herbicides/pesticides, nitrates, hydrocarbons, metals, etc.),
 - organic compounds and microbiology (organic carbon, total and faecal coliforms, bacteria and viruses).
 - naturally occurring chemicals such as routine salts (hardness, bicarbonate, sulfate, metals, trace minerals and
 - conductivity, temperature, pH, turbidity, and total dissolved solids,
 - flow rates
 - Soil hydraulic conductivities at various depths in and around the gravel pits prior to gravel extraction for reclamation purposes.
4. Construct containment ponds and sumps to withstand a one in fifty-year precipitation event.
5. Provide continuous water table level monitoring in excavations within two meters of the estimated water table level. Provide publicly accessible real-time online reporting of this information.
6. Provide continuous recording and monthly reporting of site precipitation and water table and containment pond levels. Provide publicly accessible online reporting of this information.
7. Immediately advise stakeholders and agencies if any excavation activity contacts groundwater. In such event, provide to stakeholders and AEP a remediation plan.

8. Create a mitigation plan to rectify exceedance of groundwater contamination baseline.

9. Acquire and maintain insurance or other proof of financial resources adequate to operationalise and complete mitigation plans.

11. Create a program of dye tracing flows from containment ponds to monitoring wells and main spring to understand water movement and hydraulic conductivity changes during the mine operations.

12. Provide appropriate visual screening and dust mitigation through the suitable planting of spruce trees. The spacing and size of the spruce trees and berms must be sufficient to immediately provide the intended screening and dust mitigation. This shall be provided through three rows of trees adequately spaced to ensure local best-practices access for maintenance and watering of the trees. Any tree that dies shall be replaced during the current growing season or at the beginning of the next growing season, depending on the timing of the tree's death. In the event that the County is presented with evidence of a lack of timely replacement of any dead trees, the pit operations shall be shut down until the operator has satisfied the County that the dead trees have been replaced. This barrier shall cover the south and the eastern perimeter of the pit and planting and maintenance of the shelterbelt would happen concurrently with the opening of the mine.

13. Landowner water wells shall be tested and reports shared on a monthly basis and landowners shall be compensated if their wells are compromised. The pit operator shall ensure that all contractual obligations regarding community and/or residential wells are maintained in good standing. In the event that the County is presented with evidence of non-compliance with any such contractual agreement, the pit operations shall be shut down until either the pit operator honours these obligations or demonstrates to the County's satisfaction that the evidence presented is not credible.

14. That the pit operator shall maintain 24-hour, 7 day per week monitoring of air quality through the use of an appropriate number of monitoring stations. The appropriate number of monitoring stations shall be based on industry best and that the results of that air quality monitoring shall be reported on at least a weekly basis on a publicly accessible online source.

15. That the pit operator shall ensure that the crusher is fully enclosed in sound-deadening material that meets the aggregate industry's best practices. That they shall maintain 24-hour, 7 day per week noise monitoring through the use of an appropriate number of monitoring stations (based on industry best practices) and that the results of that noise monitoring shall be reported on at least a weekly basis on a publicly accessible online source.

16. That Rocky View County shall formally request that Alberta Transportation do a formal traffic safety review of both intersections at Range Road 40 and Hwy 567 and the highway both east and west of the intersection. Any recommended upgrades from this evaluation shall be completed before a development permit is granted and

before the application is passed on to AEP.

17. That the pit operator shall provide their technical expertise and consideration in the cumulative effects of fugitive dust and emission as they will impact local beekeepers and the large number of equestrian centres in close proximity.

18. That a signage system at the entrance to the Provincial Park and a real-time warning system on the pit operator's website shall provide warnings to potential park goers alerting them to the risks of high winds in general and specific warnings when high winds (those in excess of xx km/hour) are occurring

19. That the pit's operating hours of 7 am – 7 pm Monday through Friday and 7 am – 5 pm on Saturdays, with no operations, including crushing activities, on Sundays or statutory holidays shall be strictly enforced. In the event that the County is presented with evidence demonstrating any non-compliance with these operating hours, the pit operations shall cease until the County is satisfied that appropriate remedial changes to the pit's operating procedures have been put in place to ensure no further instances of non-compliance.

20. That the pit's operating hours and activities shall incorporate the following:

- a. That no vehicles may queue on or off the site in advance of operating hours;
- b. That there shall be no entrances or exits to or from the site outside of regular operating hours, except for unavoidable emergency response activities;
- c. That there shall be no activity on site outside of regular operating hours, except for unavoidable emergency response activities.

I submit that all the above provisions need to be tied to the actual pit and apply to whatever entity is operating the pit. It is my understanding that MALP may sell this pit once the county has approved it and therefore the concern is that future owners would not have to honour these agreements. Because of this, the development permit must also include a provision that mandates that any private contractual agreements MALP has entered into regarding the pit's operations shall be transferred to a subsequent pit operator.

Thank you for considering my submission to this application process.

Tom Foss

Jacqueline

I will work on providing a more detailed level of input but think that the county is making a huge mistake approving this pit. There has been much more scientific debate that the location of the pit will affect the watershed, the Big Hill Springs as well as the creek and then eventually the Bow River. That has been supported by the report of Dr. Jon Fennell.

I do know that there is a grand scheme for the valley and sadly the majority of council does not share or perhaps is not aware? I would think that that hundreds of thousands who visit the park do care. The opportunity to expand the park by land donations from adjoining landowners will not happen when these gravel pits are approved in such close proximity to the park. Also the ability or interest to link the Trans Canada pathway and then through Cochrane to join the Glenbow Ranch and Big Hill Springs Provincial park will be gone forever, or at least for 60 years when the pit is reclaimed. Is the County aware that the Alberta government has committed millions toward a reclamation and improvement capital expenditure project ongoing on the park.

I am surprised that the County of Rocky View wants to destroy and harm a park and are not embracing the opportunity to not only protect it but actually expand and improve it.

It is sad that council and Rocky View do not share this vision. There are several other agencies that I have been in discussion with and are interested, concerned and will be monitoring and should be contributing along the way. Local landowners and over 90% of those residents voiced opposition. In fact the initial maps that RV distributed falsely or mistakenly makes it look like there was less landowner disapproval. This was perhaps an oversight or intentional deception by the applicant.

I understand there is great interest for further comment on this application and would urge council to consider their thoughts and input and the campaign that will follow.

1. City of Calgary, Senior Water Planner – their expanded mandate to protect their drinking water supply
2. Department of Fisheries and Oceans – the creek is a bull trout spawning habitat water way
3. Trout Unlimited Canada – they have an intensive habitat program planned on the creek
4. Alberta Parks – their letter attached

5. CPAWS – as their Defend Alberta Parks campaign
6. Town of Cochrane
7. Big Hills Springs Preservation Society bighillcreek.ca
8. Dr. Jon Fennell – His report is attached and I understand
9. UCP MLA for the Cochrane/Airdrie riding – Peter Guthrie. It is clearly a no brainer that he does not wish to sit on the sidelines and have gravel pits destroy the park and then halt any chance for it to be expanded for all Albertans to enjoy.

I also request that the deadline for resident comments be delayed until August 2th, 2021.

Thanks

Tom Foss

[REDACTED]

Hi Tom,

The development permit circulation period is the official response period for agencies, and in this case adjacent property owners, to provide application response. Once that period has ended, based on the received information, the file may move forward in the process.

As per the Municipal Government Act (Section 684 (1)), the development authority does have an obligation to process a development permit within 40 days after receipt unless extended through an agreement between the County and the Applicant. As this application is going to Council, we may be passed that 40 day deadline.

Discussing important topics with others can be hard to accomplish during these times and I fully understand that. Any written responses can be provided to me, any time during the application processing, up to the day before the Council meeting. Any response received will be presented for Council to consider.

I will be sending out a revised landowner notice tomorrow, as the original location map is slightly incorrect. Therefore, I will be adjusting the circulation response period to May 13, 2021 to June 3, 2021.

If you have any questions or concerns that you wish to ask the Applicant/Owners directly:

- Please let me know and I can forward them;
- I can provide you their contact details and you can contact them or
- With your consent, I can provide your contact details to them and they can contact you

Re: BYLAW C-8051-2020

Dear Rocky View County:

Alberta Environment and Parks has been made aware of a groundwater technical report related to the Mountain Ash Limited Partnership, Summit Gravel Pit proposal. This report, prepared by Dr. Jon Fennell, provides a review of hydrogeology, geochemistry, fish and aquatics and climate change related to the proposal. Our interest in this report is related to the potential effects of the proposal on Big Springs Provincial Park.

Alberta Environment and Parks (herein Parks) manages Big Hill Springs Provincial Park, which is located adjacent to a number of existing and potential aggregate extraction developments including the Mountain Ash proposal. Parks wants to highlight the importance of Big Hill Springs Provincial Park and its nationally significant year round springs, unique tufa deposits and vegetation communities. To ensure these values persist for future generations, Parks needs to secure the protection of these values.

Over the years, Parks has provided comments to developments including:

- 2013 - Redesignation of South Rock lands.
- 2018 - Draft Aggregate Resource Plan.
- 2019 - Amendments to Hillstone Aggregates.
- 2020 - Redesignation and MSDP for Mountain Ash.

Parks response to aggregate development applications has been consistent in requesting that proponents conduct a thorough assessment of surface and groundwater quality and quantity impacts related to the Park and the Big Hill spring. Parks reviewed the Biophysical Impact Assessment Report (SLR, January 2020) that supports the Mountain Ash proposal and notes that although the consultant links Big Hill Springs to the site's groundwater and notes increase in spring flows, the report does not assess impact of water chemistry changes in the spring as a potential impact of the development.

In Dr. Jon Fennel's report, geochemistry results indicating increases in metals due to the removal of overburden (exposing subsurface material) are concerning. As the Big Hill springs are so closely linked to the groundwater at the Mountain Ash site, we question the proposal's potential impact in groundwater quality and spring chemistry, affects on tufa formation, and its effects on fish and fish habitat.

In light of the new information presented in Dr. Jon Fennel's report, we request that Rocky View County consider additional assessment for the Mountain Ash site and delay its decision on the planning application PL20200031 and the associated Mountain Ash Summit Pit Master Site Development Plan (PL20200034) until the assessment is complete. The assessment should consider project effects and cumulative effects. The assessment should also use criteria ratings such as duration, frequency, reversibility, magnitude, probability supported by quantitative data and comparisons with provincial and federal water quality guidelines. To reiterate, the assessment needs to link groundwater between the site and the springs not only for quantity but also for quality (chemical changes).

We also request that Rocky View County considers the recommendations outlined in Dr. Jon Fennel's report as a means of mitigating project and cumulative impacts including:

- Aggregate Development Setbacks
 - Specifically 1.6 km setback from the boundary of Big Hill Springs Provincial Park.
 - Additional 800 m setback whereby development does not occur within 4 m of the water table.

We are confident that Rocky View County will manage aggregate resources so that values that inspired the establishment of Big Hill Springs Provincial Park will remain intact. If you require further clarification or information regarding the comments outlined above, please contact me at 403-678-9545.

Sincerely,

Michael Roycroft

Executive Summary

Mountain Ash Limited Partnership (MALP) is applying to develop an open pit gravel mine in the headwaters area of Big Hill Springs Provincial Park. This is one of many aggregate developments likely to come forward in the future given the land ownership in this area. The sand and gravel is being extracted from a buried channel system that is already being mined by Hillstone Aggregates 800 m to the west.

Big Hill Springs Provincial Park, and the spring complex that feeds water down into the fish-bearing Bighill Creek, is located roughly 800 m southeast of the MALP property. This creek is currently listed on the Fisheries and Oceans Canada “Aquatic species at risk map” possibly having bull trout (i.e. a protected species). Big Hill Springs Provincial Park (the Park) was established back in 1957 and is a cherished and unique ecological enclave located in a prairie farmland setting that receives over 250,000 visitors each year. It is so popular that upgrades are currently underway to ensure that Park’s visitors continue to enjoy its redeeming qualities.

The flow of water from the springs originates from groundwater that discharges from a buried sand and gravel-filled channel system and the underlying fractured Paskapoo Formation bedrock. The MALP site is located on top of the south-west section of the aquifer that supplies the springs. The almost constant temperature and quality of the groundwater that sustains these springs year-round is responsible for the development of unique fish habitat in Bighill Creek. Therefore any impacts to that water threaten the aquatic ecology in the local area. Similarly, local residents rely on the local groundwater for their daily consumptive needs. This will be placed at risk if subsurface development activities lead to contamination of their water wells.

MALP’s proposal to the Rocky View County Council is to mine the sand and gravel from beneath their property to within 1 metre of the water table. This will remove the vast majority of the filter that protects this important aquifer system in the headwater area of the Big Hill Springs complex. In doing so this places the remaining aquifer and groundwater discharging at the springs at risk of contamination during open pit operations and post-reclamation.

The proposal submitted by MALP is lacking in critical detail and is conceptual at best. The potential issues regarding impacts to Big Hill Springs and Bighill Creek have not been sufficiently explored or communicated. This includes no evaluation of how removal of a substantial part of this aquifer might affect the local aquatic environment (and terrestrial wildlife habitat).

Despite MALP’s contention that the “above water table” gravel mining operations will not adversely affect local groundwater conditions, evidence from elsewhere indicates the opposite. Studies have found increased water table elevations and notable changes to groundwater quality due to the reduced filtration from overlying sediments. It is noteworthy that the pre-mining groundwater quality reported by MALP

indicates the presence of contaminants like **arsenic, cadmium, chromium, and selenium** at concentrations above those listed for the protection of freshwater aquatic life.

Mining of the sand and gravel will expose the aquifer to atmospheric oxygen and enhanced weathering processes. This will also increase flushing of the remaining sand and gravel deposits with infiltrating waters. The removal of this essential filter will increase the risk of mobilizing fine particles, harmful trace elements like the ones already noted, and other contaminants like spilled fuels or process chemicals, into the local groundwater. Once mobilized, these contaminants will be difficult to recover before they reach fish-bearing waters and may eventually result in provincial and/or federal violations under the *Environmental Protection and Enhancement Act*, the *Fisheries Act*, or the *Species at Risk Act*.

Unfortunately, MALP has not addressed any of these critical environmental issues in their 2020 Master Site Development Plan or Hydrogeological Assessment Report (SLR 2020). As a result, the Rocky View County Council does not have enough information to make an informed decision regarding this application (including any potential future liability that could result from its approval).

There are plenty of other less environmentally-sensitive sand and gravel deposits throughout Rocky View County. Because of this, the responsible and sustainable response to MALP's application is to protect Big Hill Springs Provincial Park and the Bighill Creek system by establishing a suitable development buffer around these features.

A setback distance of at least 1.6 kilometers is therefore recommended. Also, to further protect groundwater quality in this important headwater area, sand and gravel extraction within and additional 1.6 kilometers of this setback should be restricted to at least 4 metres above the water table to ensure suitable filtration of recharging water.

Proper consideration of future climate change effects should also be addressed to protect against extreme events that may result in unintended damaging releases from the site into the area's groundwater. This important issue has also been overlooked by MALP.

Implementing these recommended land use planning steps will protect local groundwater quality that feeds the sensitive aquatic system in the area, and ensure the protection of local water wells, while still allowing prudent gravel development to occur.

Introduction

Mountain Ash Limited Partnership (MALP) has put forward a plan to develop a sand and gravel (aggregate) open pit mine near the headwaters areas of Big Hill Springs Provincial Park. The plan is to strip overburden materials and stockpile them for later use during reclamation, followed by excavation, crushing, and screening of the aggregate for transport to market. Excavation of the pit is proposed to be kept to within 1 metre of the historical high-water mark of the local water table. Despite this, there are significant environmental concerns regarding this development and how appropriately the site conditions and the operational disturbance have been assessed. The main concerns with this proposed development relate to the following:

1. Proximity to the Big Hills Springs Park (and the potential for impacts to the unique system of springs and Bighill Creek, which is fed by these springs).
2. Risk of potentially irreparable adverse impacts to groundwater quality (and associated effects to nearby receptors).
3. Potential risks for protected fish and fish habitat (including aquatic species that support fish populations known to be present in Bighill Creek).
4. Questionable success of any mitigation (including post-reclamation timeframes) that might be necessary.
5. Risks associated with climate change (and the impact to safe mine operations and reclamation efforts).
6. Cumulative effects (from other similar developments extracting gravel near the Big Hill Springs headwater area and along Bighill Creek).

The Friends of Big Hill Springs Provincial Park (FBHSPP), a local landowner group, and the Bighill Creek Preservation Society (BCPS), a local watershed group mandated to develop a watershed plan for the Bighill Creek basin, are concerned for the future of the springs should this, or any other similar development, be approved by the Rocky View County Council. Both groups would like to see a protective buffer established around this unique and popular prairie setting. To assess the appropriateness of such an initiative, the group retained Dr. Jon Fennell to review and comment on the MALP's 2020 Master Site Development Plan and associated Hydrogeological Assessment Report (SLR 2020). Dr. Fennell is a Senior Hydrogeologist, Geochemist, and Water resource Specialist with over 30 years experience in environmental and contaminated sites investigations, risk analysis, and climate change assessment. He is a registered member-in-good-standing with the Association of Professional Engineers and Geoscientists of Alberta (APEGA),

among other similar agencies in Western Canada. Further information regarding Dr. Fennell's credentials is provided in Appendix 1.

The remainder of this report summarizes the critical environmental issues that the RVC Council need to consider regarding this and any other similar developments near the Big Hill Springs Provincial Park and Bighill Creek system.

Key Findings

1. Proximity to the Big Hill Springs Provincial Park

The proposed MALP gravel pit is located in the west half of Section 31, Township 26, Range 3 West of the 5th Meridian and consists of 131 hectares (or 323 acres) of land designated as Ranch & Farm District under Rocky View County's Land Use Bylaw C-4841-97. The aggregate deposit that MALP is intending to mine is part of a large, buried sand and gravel deposit that extends towards the northwest for up to 10 km or so. This large accumulation of granular material, which ranges in thickness anywhere from less than 10 m up to almost 30 m, was formed during the last glaciation of the area and was deposited in a former valley eroded into the underlying bedrock of the pre-glacial landscape. Given the hydraulic properties of the sand and gravel aquifer it classifies as a Domestic Use Aquifer¹.

Overlying the sand and gravel deposit is anywhere from 3-6 m of glacial till consisting of clay and silt, with some sand and rocks, followed by about 30-60 cm of topsoil. Underneath the sand and gravel deposit is bedrock of the Paskapoo Formation comprising layers of sandstone, siltstone, and shale/mudstone sequences. These bedrock deposits have been subjected to fracturing and faulting as a result of deformation during formation of the Rocky Mountain foothills area and offloading of thick glacial ice between 10,000-15,000 years ago².

The footprint of the MALP property is located approximately 800 m from the boundary of Big Hill Springs Provincial Park, a very popular recreation spot for locals, Calgarians, and tourists visiting the area. It is a unique ecological enclave surrounded by farmlands that has considerable recreational and environmental value. The land area that is intended to be mined comprises gently rolling terrain with drainage towards the south and east across the property. The southern half of the proposed development has an abrupt change in elevation from 1292 metres above sea level (masl) to 1272 masl due to the presence of a large drainage-way leading down to the Big Hill Springs complex. Within this drainage-way is a small intermittent tributary stream located approximately 300 m to southeast of the property boundary that also leads down to the springs. This tributary is documented by SLR Consulting (Canada) Ltd. as being fed only by surface

¹ Alberta Government 2019

² Moran 1986

drainage (SLR 2020); however, it is very likely that groundwater in the local sand and gravel deposits, as well as the upper bedrock, discharge to this tributary stream at some point further downslope from its origin.

Big Hill Springs is a spring complex fed by the very same groundwater residing in the sand and gravel deposit that MALP intends to mine for aggregate resource. Investigative work done by SLR during the period of 2014 to 2019 found the water table to be located at a depth of up to 30 metres below surface on the upland portion of the site, and a depth of around 12 metres at the southern end where the land surface drops down into the drainage-way. The springs flow year-round at rates ranging from 0.4 to 0.1 cubic metres per second and eventually discharge into Bighill Creek – a fish-bearing water body indicated as having protected bull trout, which is a threatened species under the Species at Risk Act (SARA). The water from Bighill Creek eventually discharges into the Bow River at the Town of Cochrane. The relatively stable (and cool) temperature of the spring water (around 6°C), and its high quality (low mineralization and turbidity), has led to development of local habitat that supports various vegetation, wildlife, and aquatic species. As such, the Big Hill Springs, the established Park area, and the associated ecology are an important aspect of Bighill Creek's ability to sustain ecological viability.

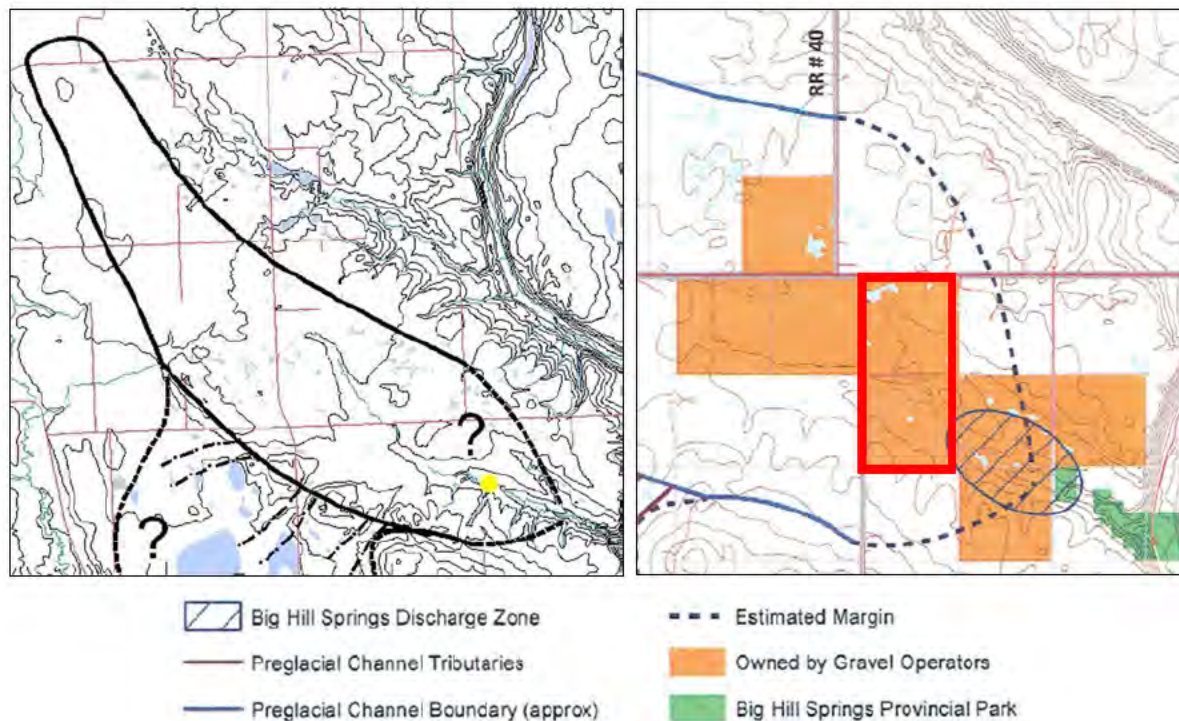

Figure 1. Mapped preglacial channel for Big Hill Springs (left)³, where dot-dashed lines indicate extent of buried tributaries, and extent of lands owned by gravel operators near Big Hill Springs Provincial Park (right)⁴ *Note: MALP property outlined in red.*

³ Excerpt from Figure 22 of Poschmann S. (2007)

⁴ Excerpt from a figure provided by Bighill Creek Preservation Society

The MALP development is not the only pressure facing the headwater area of Big Hill Springs complex. In addition to the MALP proposal there are a number of other land parcels that are currently owned by gravel operators, the locations of which are shown in Figure 1. It is clear from a review of this map that there are numerous locations where gravel could be mined, if approved, included areas right up against the Park limits and the spring complex itself. It is also clear that the MALP property itself (outlined in red) impinges on the identified discharge zone for the springs.

It is MALP's opinion that development of their sand and gravel pit will not adversely affect the quality and quantity of water reporting to the Big Hill Springs complex as they only intend to mine down to within 1 metre of the historical high-water level for the local water table. Although the final pit depth is yet to be established, MALP assumes that the operation will be a dry pit configuration, and no dewatering of the gravel will be required, thus no drawdown impact to the groundwater underneath. In fact SLR goes on to say in their technical report that the development will actually increase the recharge of water to the sand and gravel left in place, which they consider to be a "positive" effect. However, there are some significant considerations that contradict that position. These will be explained in the paragraphs and sections that follow.

Figure 2. Piper plot showing similarity of water chemistry from various sampling locations (i.e. the sand and gravel monitoring wells established on the MALP property, nearby domestic water wells completed in the bedrock, and Big Hill Springs)⁵

⁵ Figure 1 from SLR's Hydrogeological Assessment Report (2020), pdf page 19 of 335.

Results of SLR's hydrogeological assessment clearly indicate that the groundwater in the sand and gravel deposits and fractured upper bedrock, and the water discharging at the Big Hill Springs complex, are chemically the same. This is demonstrated by the similarity of major ion compositions in the Piper plot prepared by SLR (Figure 2).

Given this evidence of this hydraulic connectivity, any changes to groundwater quality or quantity within the excavated footprint of MALP's gravel pits will eventually manifest themselves at the Big Hill Springs complex and eventually Bighill Creek. Based on the calculated groundwater flow direction to the southeast and a velocity of about 300 m/year, using data from SLR (2020), the estimated travel time for groundwater to move from MALP's property to the springs is 2-3 years. This is considered a rather short timeframe for groundwater flow and places the springs at considerable risk of adverse impacts from any contaminants that might originate from pit operations or reclaimed areas. Figure 3 shows the locations of monitoring wells (MW-series) and local water wells (WW-series) used in the SLR's 2020 site assessment.

- Aluminum
- Arsenic
- Barium
- Cadmium
- Chromium
- Iron
- Lead
- Mercury

It is also stated in the SLR (2020) report that the reason for detections of metals and trace elements above GCDWQ is turbidity from their wells, which ranges from below detection levels (<0.1 NTU) up to >4000 NTU (see Tables section in this report). This is a common occurrence when turbid water samples are analyzed for Total Metals, and usually results from the preservation of unfiltered water samples with laboratory-grade nitric acid. When assessing water sample collected by SLR with low turbidity values (<10 NTU), the exceedances of GCDWQ values become restricted to a lesser number of elements:

- Aluminum
- Barium
- Iron
- Lead
- Manganese

It is important to note that the groundwater beneath the area does not just support drinking water supplies. It also sustains the flow of water at Big Hill Springs, which also provides significant discharge to the fish-bearing Bighill Creek to the east. When guidelines for the protection of freshwater aquatic life, or FWAL⁸, are applied to the groundwater monitoring results the following elements exhibit concentrations above long-term chronic guidelines:

- Aluminum
- Arsenic
- Cadmium
- Chromium
- Copper
- Iron
- Lead
- Selenium
- Zinc

Review of water quality at the Big Hill Springs complex itself, as reported by SLR (2020) and summarized in the Tables section of this document, does not indicate concentrations of many parameters exceeding the FWAL guidelines. Only the occasional aluminum, chromium, and selenium exceedances are noted. Similarly, results from water samples collected from Bighill Creek near the location where Big Hill Springs discharges into it, also provided in the Tables section of this report, indicate the following elements occasionally approaching or exceeding FWAL guidelines⁹:

- Aluminum
- Cadmium
- Chromium
- Iron
- Selenium

⁸ Alberta Government (2018). Environmental Quality Guidelines for Alberta Surface Waters.

⁹ Fouli Y. (2020)

It is therefore clear that naturally-elevated concentrations of various metals and trace elements are already present in the groundwater and surface water of the study area, and that the aquatic habitat and fish within the Big Hill Springs and Bighill Creek system are already exposed to them. The question that remains unanswered by MALP is:

“How will the excavation of sand and gravel at their proposed pit, exposure of the remaining sand and gravel to oxygen in the atmosphere, and enhanced recharge through a relatively thin layer of remaining sand and gravel above the water table affect the mobility of contaminants (i.e. metals, trace elements, nutrients, turbidity and any other constituents associated with their operation) into the groundwater used by local residents, and discharge that supports the Big Hill Springs, and eventually flow in Bighill Creek?”

It is a well-known fact that when buried sediments are excavated and exposed to the atmosphere the local geochemical conditions change. The increased chance of mineral oxidation combined, with the usual wetting and drying cycles from recharge and rainfall events, work to enhance weathering and leaching reactions and ultimately the release of various constituents into the local groundwater. Table 1 provides an example of how the water quality beneath “above water table” gravel pits can change¹⁰.

Table 1. Example of difference in natural groundwater and groundwater measured 2.5 m below above watertable gravel extraction areas (Source: Hatva 1994)

Parameter		Rainwater <i>n</i> = 12			Natural groundwater areas <i>n</i> = 43-60			Gravel extraction areas <i>n</i> = 76-240		
		Md	min	max	Md	min	max	Md	min	max
Temperature	°C				4.7	1.1	6.8	5.6	0.0	8.8
Acidity	pH	4.5	4.1	6.3	6.4	5.6	7.3	5.9	5.4	7.3
Conductivity	mS m ⁻¹	4.0	2.0	9.0	6.0	3.0	9.0	7.0	4.0	19.0
Carbonic acid	mg l ⁻¹				11.0	2.0	44.0	24.0	2.0	62.0
Bicarbonate	mg l ⁻¹				25.0	15.0	38.0	20.0	8.0	45.0
Chloride	mg l ⁻¹	1.0	1.0	3.5	2.0	1.0	7.0	3.0	2.0	37.0

KMnO ₄ -consump- tion	mg l ⁻¹				3.0	0.0	9.0	2.0	0.0	51.0
Hardness	°dH				1.0	0.5	1.5	1.0	0.5	3.0
Nitrate	mg l ⁻¹	2.1	1.4	6.7	0.4	0.0	4.0	1.9	0.0	11.5

Note: *n* = number of samples; Md = median values

What is most striking about the change in median values from natural groundwater areas to gravel extraction areas is the slight increase in temperature (4.7 to 5.6°C) and reduction in pH (6.4 to 5.9), the 2 times increase in carbonic acid (11 to 24 mg/L), and 2.5 times increase in sulphate (4 to 10 mg/L). It is the carbonic acid that is of most significance given its importance in mineral weathering and other surface-related reactions involving minerals with trace elements adsorbed to their surfaces (e.g. clays). The increase in nitrate (0.4 to

¹⁰ Hatva T. (1994)

1.9 mg/L) is evident and associated with the reduced protection to the underlying groundwater from removal of the protective soil cover. Removal of this material effectively reduces the attenuating, or filtering, capacity of the remaining material below before the infiltrating water reaches the underlying water table.

Once released into the local groundwater environment, geochemical conditions will dictate the mobility and toxicity characteristics of contaminants released. Chromium, for example, tends to be more mobile and toxic under oxygenated conditions, and exists in the hexavalent form as chromate ions (CrO_4^{2-}). Similarly, selenium exists as selenate (SeO_4^{2-}) and selenite (SeO_3^{2-}) species, with selenite being the more toxic and mobile form. Figure 4 provides Eh-pH diagrams showing the various stability fields for chromium and selenium species in water. The red dots indicate the type of Eh and pH conditions that would be expected in well-oxygenated recharge water moving through a relatively thin layer of residual sand and gravel beneath a gravel pit (like MALP's).

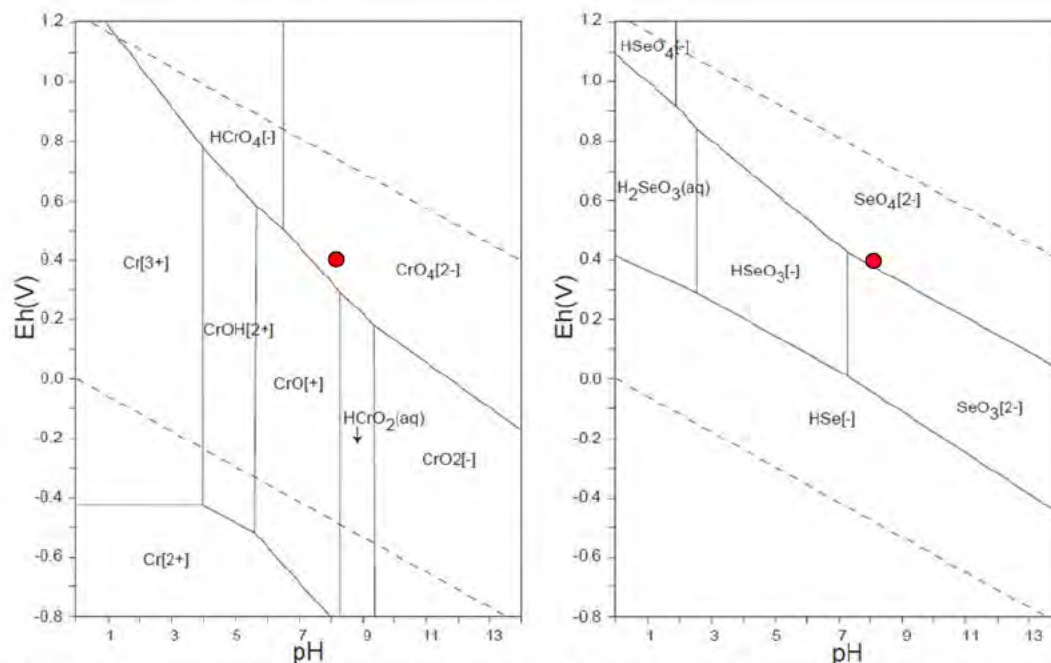

Figure 4. Eh-pH diagrams for chromium (left) and selenium (right)¹¹. (Note: red dots represent conditions expected in well-oxygenated groundwater delivered by recharge through a thin remaining layers of gravel)

The potential for mobilization of fine particulate matter and/or colloids¹² into the groundwater as a result of MALP's mining operations also exists. Removal of the protective cover of glacial till, followed by a significant reduction in the thickness of the sand and gravel deposit, will leave a small amount of material

¹¹ Atlas of Eh-pH diagrams

¹² Colloids are very low diameter particles (1 nanometer, or 10^{-6} mm to 1 micrometer, or 0.001 mm) which are responsible for the turbidity or the color of water. In fast moving groundwater systems such particles can remain suspended and move considerable distances due to the physical lifting effect of the water and associated charge characteristics (positive, negative, or neutral).

above the water table. This residual sand and gravel will be exposed to increased infiltration and weathering of minerals by infiltrating runoff. The enhanced recharge of water will increase the ability to flush fine particulate matter into the underlying groundwater and eventually into the fractures of the upper bedrock. The local water table will also have a high probability of increasing above the normal range of variability. An example of the increase in groundwater levels below natural versus developed areas is provided in Figure 5.

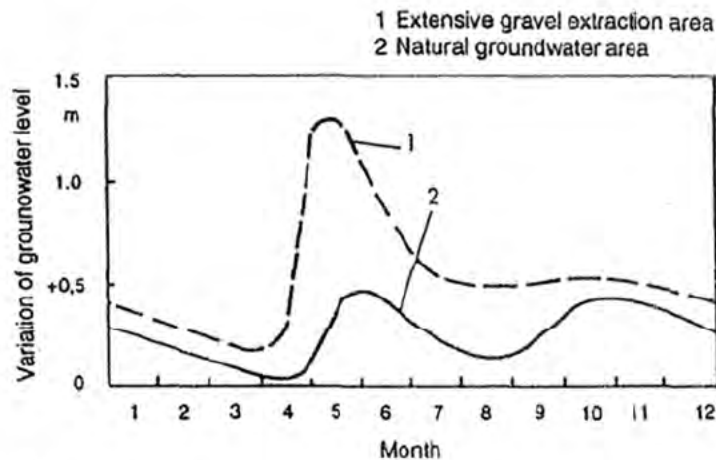

Figure 5. Example of expected increase to water table due to above water table gravel extraction operations
(Source: Hatva 1994)

Turbidity issues have been documented at gravel pits, with measurable effects being noted as far as 1.8 km downgradient of those operating areas¹³. The following quote is taken from Mead (1995), indicating the significant distance that turbidity plumes can travel through permeable sand and gravel deposits:

"This DEQ study found a turbidity plume that extended more than a mile to the north (downgradient) of the gravel operation. The average turbidity of the water being discharged from the washing operation into the pond at the site was 2,737 nephelometric turbidity units (NTUs). Nearly all wells sampled within the first 6,000 feet of the turbidity plume were measured at 5 NTU or more. Many wells within the first 3,000 feet of the plume had turbidity levels of 10 NTU or more. Nearly all wells outside the plume had turbidities of 2 NTU or less."

The most consistent position of most regarding turbidity movement within the subsurface is that the fine particles will be strained out in the pores of the granular material. However, this may not apply to the very small particles, or colloids, that can still make their way through the soil grains and continue on. For reference, Alberta's FWAL turbidity guideline for long-term exposure (>24hr) in clear running waters is

¹³ Mead R.D. (1995)

2 NTUs above background levels. Based on data provided by SLR (2020), and included in the Table section of this report, the background turbidity in the groundwater beneath the MALP property is generally less than 1 NTU. Therefore the risk of increasing local turbidity values in the groundwater exists.

Another concern that has not been addressed, at all, is the potential for leaching of inorganic or organic constituents from the previously disturbed soil materials placed back over the excavated areas once mining and reclamation activities are complete. The fact that the till is clay-rich and will likely have some metals and trace elements that could be leached by infiltrating precipitation of naturally lower pH presents an additional risk. For reference, the average pH of precipitation in the Calgary area is around 6, with a minimum of around 4.9¹⁴. The reason for the pH values below neutral (pH 7) is the equilibration of the atmospheric moisture with carbon dioxide (CO₂) and the formation of carbonic acid (H₂CO₃). Other constituents like oxides of sulphur and nitrogen gases released from things like sour gas plants and agricultural lands development can also serve to reduce the pH through the development of sulphuric acid (H₂SO₄) and nitric acid (HNO₃). Such pH values are considered mildly acidic and therefore can enhance minerals weathering reactions.

The risk associated with the release of harmful metals and trace elements, as well as other things such as nutrients, turbidity and other site-specific contaminants (e.g. fuel spills), into the local groundwater is twofold:

- i) these constituents can eventually impact local water wells, and
- ii) they can eventual discharge at Big Hill Springs resulting in increased loading of nutrients and harmful constituents to Bighill Creek, thus compromising sensitive fish habitat.

3. Potential issues for fish and aquatic habitat

The presence of naturally-elevated concentrations of trace elements in the local groundwater is a clear indication that the geochemical conditions in the area are conducive the mobilization. With the exposure of the open gravel pit areas to atmospheric oxygen and increased recharge, there is increased risk to mobilize even more of these harmful trace elements into the groundwater and eventually Big Hill Springs, either in dissolved form or associated with colloidal material in a process known as “facilitated transport”. As noted earlier, the groundwater that feeds the Big Hill Springs complex eventually discharges to Bighill Creek, adding up as much as 20 to 50% of its flow¹⁵ and regulating its water temperature.

MALP’s application documents fail to explore the topic of fish and fish habitat and therefore this aspect has not been considered as a “valued component” in the assessment process. A search of Fisheries and

¹⁴ Alberta precipitation quality monitoring program website

¹⁵ Fouli Y. (2020); BRBC (2020)

Ocean Canada website, showing the location of stream protect under the Species at Risk Act, identified bull trout, which is a protected species (Figure 6).

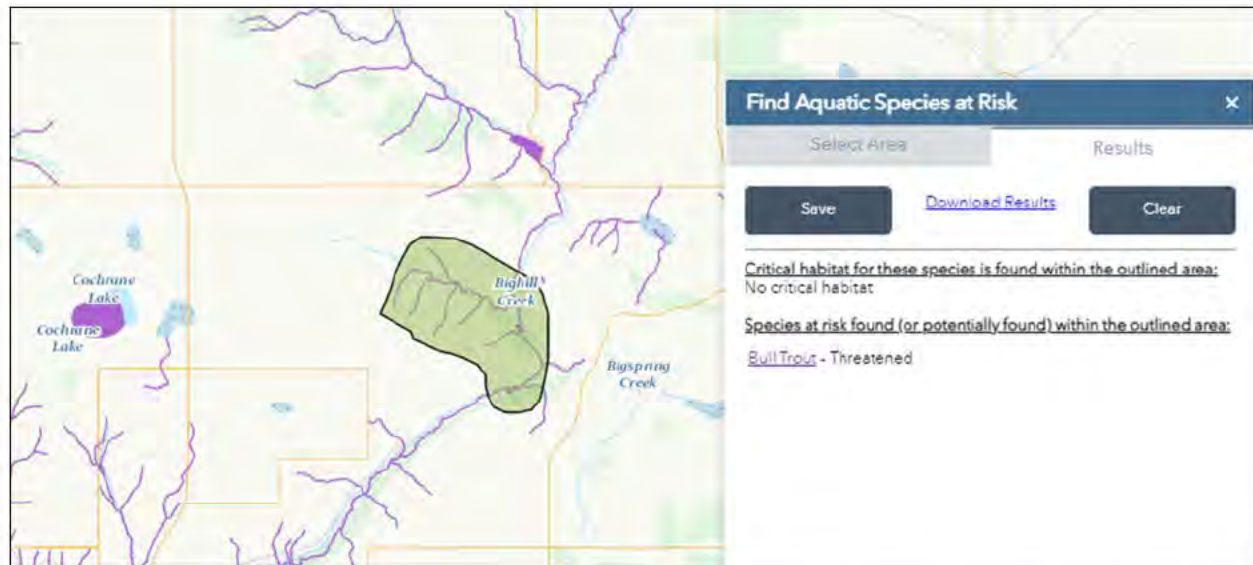

Figure 6. Excerpt from the Fisheries and Oceans Canada Aquatic species at risk map (Note: area shown in green indicates the Big Hill Springs headwaters and the confluence with Bighill Creek)¹⁶

A report prepared for the BCPS by Trout Unlimited Canada (TUC)¹⁷ identified a number of fish species in Bighill Creek, in particular long nose dace, brook trout, brown trout, longnose/mountain/white sucker, mountain whitefish, and rainbow trout. As noted earlier, the *SARA*-protected bull trout species is also identified. At the location where discharge from Big Hill Springs enters Bighill Creek there is a significant lowering of stream water temperatures and the development of unique habitat for cooler water fish species. As noted by TUC:

“The highest density of Brook Trout within reach 4 occurred at the confluence of Bighill Creek and Bighill Springs Creek, likely due to the thermal preference of Brook Trout for the cold water from Bighill Springs. The water temperature in Bighill Springs Creek was dramatically colder than all other sites and only supported Brook Trout.”

Additionally, results from a 2019 biomonitoring program¹⁸ using environmental DNA metabarcoding identified that the highest species richness is noted in this reach of Bighill Creek, underscoring the importance contributions of water from Big Hill Springs in providing unique aquatic habitat¹⁹.

¹⁶ Fisheries and Oceans Canada

¹⁷ TUC (2018)

¹⁸ Hajibabaei Lab 2019

¹⁹ Fish habitat means water frequented by fish and any other areas on which fish depend directly or indirectly to carry out their life processes, including spawning grounds and nursery, rearing, food supply, and migration areas.

Because fish frequent Bighill Creek, the greatest risk posed by MALP's (or any other) pit development in the headwaters areas of the Bighill Creek system is the altering of groundwater quality and eventual impact to aquatic receptors from discharge of contaminants released into groundwater reporting to that water course. This has particular relevance with respect to metals and trace elements that SLR has shown to be already present at elevated concentrations in the groundwater beneath MALP's property. Spills of fuels, lubricants, and other chemicals used during the gravel mining process is also a concern.

In Alberta, the *Water Act*, *Environmental Protection and Enhancement Act*, *Wildlife Act*, and their associated regulations are the main legislative instruments that provincial regulators rely upon when reviewing development applications such as this. This review process is meant to determine:

- i) if the application is sufficient and complete,
- ii) whether the potential impacts to wetlands, water bodies, fish and fish habitat (as well as wildlife) are adequately described,
- iii) whether proposed avoidance and mitigations are appropriate, and
- iv) whether the project should be approved, modified, or rejected.

Federally, the *Fisheries Act* and *Species at Risk Act* are the main legislation that address fish-related issues (as well as vegetation and wildlife) associated with development activities. In particular, under the *Fisheries Act* no one is to create a situation where there will be harmful alteration, disruption or destruction (HADD) of fish habitat. Equally, the release of deleterious substance is forbidden. The relevant excerpts from the Act are as follows:

Section 35:

Harmful alteration, disruption or destruction of fish habitat

35 (1) No person shall carry on any work, undertaking or activity that results in the harmful alteration, disruption or destruction of fish habitat.

Section 36:

Deposit of deleterious substance prohibited

(3) Subject to subsection (4), no person shall deposit or permit the deposit of a deleterious substance of any type in water frequented by fish or in any place under any conditions where the deleterious substance or any other deleterious substance that results from the deposit of the deleterious substance may enter any such water.

It is clear that MALP has failed to adequately address the potential impacts to Bighill Creek and the groundwater feeding Big Hill Springs that eventually discharges into it, and therefore the potential impacts to fish and fish habitat.

The main challenge facing the RVC Council in assessing MALP's pit application, and any other similar applications close to the Big Hill Springs complex and/or Bighill Creek itself, is the potential adverse impacts to fish or fish habitat including the aquatic species that support those fish. Allowing the development of gravel pits too close to the headwaters of Big Hill Springs, or other critical areas along Bighill Creek itself, where the release of dangerous and deleterious substances like **arsenic, cadmium, chromium, selenium**, etc. can occur may trigger a contravention of provincial and/or federal Acts. This application has yet to be reviewed by Alberta Environment and Parks (AEP) and/or the Department of Fisheries and Oceans (DFO), and therefore it is premature to approve any such application where the risk to fish and fish habitat has not been properly considered or assessed.

4. Success of any mitigation

The preceding evidence and examples of how "above water table" sand and gravel pits can alter groundwater conditions (both physically and chemically) demonstrates that it is likely that contaminants and particulate matter will be released into the local groundwater from MALP's development, should it proceed. The risk of this occurring has obviously not been assessed by MALP with appropriate calculations or geochemical modelling. Therefore it would be left up after-the-fact monitoring to detect these contaminants and signal the need for responsive actions. However, once detected these contaminants are already on the move and will require mitigation before they reach and negatively impact a nearby receptor like a water well or spring. Again, MALP has provided no evidence that they have considered this aspect, including what they would propose do in the event of such an occurrence. A more proactive stance would be appropriate considering the risks posed.

A typical approach to a contaminant release is establishing a groundwater recovery well, or wells, to intercept impacted groundwater before it can reach a receptor. Pumping effectively creates a capture zone where contaminants are pulled in and recovered to the surface where they can be dealt with accordingly. In MALP's location a recovery system operating this close to the Big Hill Springs complex would capture of groundwater that would otherwise report to (feed) those springs, and possibly local water wells. And, if the recovery wells needed to be installed in the bedrock, because of low groundwater levels below the remaining sand and gravel deposits, this could pull contaminants and particulate matter down into the fracture networks and become even more of a challenge.

If groundwater recovery is not viable, then establishing some other form of mitigation would be required. The difficulty with any type of engineered system is the ability to successfully commission that system and ensure it is functioning properly so as not to negatively affect local groundwater users or downgradient locations reliant on that same groundwater. Therefore, the best approach to ensure protection is to eliminate the risk of contamination altogether.

Establishing a suitable buffer zone both vertically and laterally within this gravel deposit would allow groundwater quality impacts to be remediated through natural processes before reaching the water table and affecting local receptors. With respect to a development setback, a distance of at least 1.6 kilometers from nearby domestic use water wells and important water features like Big Hill Springs and Bighill Creek is justified given the findings of Mead (1995), unless substantiated otherwise through a rigorous scientific review process. This would mean no gravel pit development in this setback area. The red outlined area in Figure 7 shows the proposed development setback area.

Figure 7. Proposed setback areas for gravel pit development to protect Big Hill Springs Provincial Park and Bighill Creek aquatic habitat.

Additionally, to provide added protection outside of the development setback, recommendations provided by Hatva (1994) indicate that maintenance of a vertical buffer of at least 4 metres of sand and gravel above the water table would allow for the natural filtration and remediation of any contaminants that may be released by peripheral operations. The recommended distance to extend this pit development constraint is an additional 1.6 kilometers (yellow outlined area in Figure 7). In order to stay 4 meters above the water table, or even 1 metre for that matter, will require a firm understanding of the historical high-water level for the location so as not to extend the gravel pit too deep. This critical determination has not been clearly defined by MALP for the area beneath their property.

5. Climate change considerations

There is concern that the impacts of climate change have not been addressed, at all, in MALP's development application. Figure 8 shows the anticipated change in temperature and precipitation conditions for the Calgary region based on output from 24 separate GCMs (General Circulation Models) provided by the Pacific Climate Impact Consortium through the Climate Atlas of Canada website²⁰.

Figure 8. Anticipated change to temperature and precipitation in the Calgary region over this century (RCP 4.5 scenario)

In the majority of model cases the expectation is for an increase in precipitation anywhere from less than 5% up to as much as 35% in the coming decades. Also, a doubling of the number of days with heavy precipitation (20 mm) from 2 to 4 days is projected by the end of the century, with the extreme model cases showing up to 11 days in the latter part of this century. Convective storm activity is also expected to increase due to warmer temperatures as the ability of the atmosphere to hold water increases. Convective storms can deliver large amounts of precipitation over a short period of time and overwhelm holding pond systems if not properly designed with this in mind. Kuo et al. (2015) indicate that an overall shift in the intensity, duration and frequency, or IDF, of precipitation events in general, is expected:

*“Future IDF curves show a wide range of increased intensities especially for storms of short durations (≤ 1 -h). Conversely, future **IDF curves are expected to shift upward** because of increased air temperature and precipitable water which are projected to be about 2.9°C and 29% in average by 2071–2100, respectively.”*

²⁰ Climate Atlas of Canada

This anticipated change to hydroclimatic conditions is related to a shifting of the mean towards more extreme conditions, an increase the degree of variability, and a change in symmetry relating to the major climate drivers - temperature and precipitation. This is illustrated in Figure 9. What is obvious is that as the world continues to warm, and climate conditions shift towards a new regime, the probability of extreme events, commonly described by the 10th and 90th percentiles, will adjust as a result. Therefore, gravel pit developments with operations extending out multiple decades and leaving behind landscapes in the form of reclaimed depressional areas need to consider how projected climate change will affect their design, longevity and ultimate success in reaching stated goals and regulatory requirements.

Figure 9. Example of how climate can change with a shift in mean, variability, and symmetry conditions²¹

It is my professional experience that there is a general lack of consideration for climate change in most development applications and how this might affect risk to nearby receptors. MALP's application is no different. If approved, each open pit will form a local catchment for snow melt and rainwater, thus focussing recharge into the subsurface despite all efforts to manage water out of the working areas. Ponds will need to be properly sized considering the likelihood of more extreme events, compared to current conditions, so they do not overtop and/or fail. All indications, thus far, are that normal return periods for extreme events will shorten in duration, so a 1:25-year event may become a 1:10-year event, and a 1:100 may become a 1:50, so on.

²¹ Ummenhofer and Meehl 2017

It is also unclear what effect the altered landscape will have on the local watertable under future climate conditions. For the reasons outlined in this document, the focussing of recharge caused by the excavation and removal of large amounts of sand and gravel from the MALP property will:

- i) threaten groundwater quality due to exposure of the aquifer,
- ii) reduce the thickness of the remaining sand and gravel, and the associated filtration and contaminant attenuation capacity,
- iii) increase the elevation of the water table due to enhanced recharge,
- iv) increase the risk of contaminant migration into the groundwater within the remaining sand and gravel and fractured bedrock, and
- v) increase the risk of adverse impact to systems receiving groundwater discharge from the pit areas.

Post-development, the reclamation landscape will continue to focus this recharge, but now over a broader area through disturbed till and topsoil on top of a reduce thickness of filtering material above the fractured bedrock. This may further exacerbate the delivery of soluble and particulate contaminants present in those reclamation materials, such as metals and trace elements and nutrients (nitrogen, organic carbon), into the underlying groundwater supplying local wells and the Big Hill Springs complex. Restoration of agricultural development and/or grazing will increase the risk of further contamination into the future as well.

A much higher water table due to enhanced recharge from capture of annual precipitation or large convective storms could also lead to water ponding on the surface leading to enhanced runoff, erosion risk, and increased sedimentation of downgradient areas like the Big Hill Springs and Bighill Creek. These are all considerations that MALP has failed to adequately assess, and therefore leads to an extreme risk of unintended consequences.

5. Cumulative effects

There is currently one operating gravel pit (Hillstone Aggregates) located about 850 m due west of the MALP property along Highway 567. That operation is extracting gravel from the same buried channel deposit that MALP intends to exploit. A number of other gravel mining developments have been proposed, or are under consideration, at the downstream end of this buried sand and gravel deposit and in headwater area for Big Hill Springs. This raises concerns regarding the cumulative effect that multiple pits would have on the water balance and water quality in this sand and gravel aquifer and the resulting impacts to connected aquatic features. In response to this concern, a legal challenge was presented to the Court of Queen's Bench in 2019 (Docket 1701 12053), and on September 16 of that same year the decision was made by Justice J.T. Eamon to set aside the RVC Council's decision to approve a Natural Resource Industrial (NRI) District within the west half of Section 31. This is exactly where the MALP property

resides. The County is presently appealing this court ruling, but it is understood that the lands still remain designated as Ranch & Farm (R&F) District.

The concern for cumulative development effects on the Big Hills Springs complex, and local water well owner, is the reason why the original court challenge to the RVC Land Use Bylaw was launched back in 2019. It is evident that a considerable amount of aggregate development would occur in the headwater area, and other parts of the extended sand and gravel deposit (see Figure 1, right image) should a change be made from R&F to an NRI District. It is also evident that the risk of adverse impacts from the MALP development will add to any impacts propagating from other nearby sand and gravel pits. As such, the effects of all developments regarding increased recharge and constituent mobilization into the groundwater sustaining Big Hill Springs and local users is a grave concern considering its value to the local environment.

This fact is the reason for the recommended 1.6 kilometer development setback (at a minimum, unless determined otherwise) and maintenance of a vertical 4 metre buffer above the water table for any other gravel pit developments within 1.6 kilometers of that development setback. The sole purpose of this strategy is to maintain the quality of the groundwater sustaining the springs and supporting aquatic habitat reliant on the delivery of good quality water of stable temperature. Such a development buffer will also protect the quality of groundwater for nearby households and farms reliant on water wells for their everyday needs. Given that there are plenty of gravel resources in other locations in the County and away from this sensitive headwater, establishing such a development buffer would:

- i) preserve the quality of a well-loved provincial park and prairie spring complex,
- ii) ensure that regulatory violations do not occur down the road, and
- iii) not adversely affect the potential for the County to realize aggregate levies.

To achieve sustainability (i.e. the balancing of economic and environmental consideration for societal benefit) it is important to make room for, and preserve, natural landscape features and reliant ecosystems when considering the impacts of resource development projects. This can be achieved through prudent land use planning and decision-making.

Closure

It is clear that Big Hill Springs is a unique feature in Rocky View County that serves the recreational needs of residents and visitors and provides a quiet respite for many to connect with nature or relax with family and friends. It is also frequented by wildlife. The area is located between Parkland and Foothills natural regions and contains a large complex of springs feeding a tributary creek and series of small waterfalls that flow year-round over rocky terraces (and unique tufa deposits) covered with a lush growth of shrubs and grasses. The area is also the site of an historic fish hatchery. In fact, the area is so special, and regionally

unique that the government established this as a provincial park in 1957, which received over 250,000 visitors each year.

The spring complex at the headwaters of Big Hill Springs Provincial Park is sustained by groundwater that discharges from a large, buried sand and gravel aquifer deposited thousands of years ago. These sand and gravel deposits are gaining increased attention, and pressure, to be developed as aggregate by various companies. Despite the fact there are multiple other locations in Rocky View County and the immediate region where sand and gravel aggregate can be extracted, or is already being exploited, MALP (and others) are interested in establishing pits in close proximity to Big Hill Springs Provincial Park and the headwaters of the Big Hill Springs complex.

There are definite future ramifications for this type of development when considering local groundwater users and surface water bodies that receive, and rely on, the groundwater discharging from this sand and gravel aquifer. The risks of future impacts to the local groundwater are only increased due to the cumulative pressures from multiple aggregate operations that want to establish themselves in the same area. Not only is there an issue regarding changes to groundwater quality, but there is also legal liability associated with future impacts to aquatic habitat and fish in Bighill Creek, which could trigger a series of violations related to provincial and federal Acts. Establishing a development setback of at least 1.6 kilometers, and the requirement to maintain an adequate vertical buffer of undisturbed sand and gravel above the water table of at least 4 metres for any other development within 1.6 kilometers of this development setback, would manage the risks posed to the Big Hill Springs complex and the Bighill Creek system. And, in doing this will also avoid the potential for future interventions on development applications and manage the risk of regulatory violations.

It would also be a useful exercise for the RVC to conduct an overall assessment of the county area to identify locations where a similar type of gravel pit development setback would make sense to preserve important environmental assets and reliant ecosystems. This would avoid future interventions and the time and resources spent resolving them.

APPENDICES

APPENDIX 1

Jon Fennell. M.Sc., Ph.D., P.Geol.

PROFESSIONAL PROFILE

Dr. Jon Fennell has been a practicing consultant in the natural resource sector for over 30 years offering support in the environmental sciences and resource management. His experience includes contaminated sites assessment, development of local and regional-scale groundwater systems, mine dewatering strategies, water supply and disposal, groundwater-surface water interaction assessment, implementation of monitoring and management systems, climate analysis and adaptation strategies, and environmental forensics including applications of:

- i) remote sensing
- ii) downhole, earth-based and airborne geophysical methods
- iii) geochemical assessment & modelling
- iv) stable and radiogenic isotopes to support source water tracing, chemical fingerprinting, and age-dating

The bulk of Jon's experience is associated with various oil & gas and mineral resource development projects in Canada and abroad. Over the last 13 years Jon has worked closely the Alberta Government through various initiatives to support the Water for Life Strategy, Land Use Framework, and Cumulative Effects Management System in the province. A primary area of focus is on developing strategies to ensure water security and communicating the importance of water knowledge as it applies to sustainable development activities.

PROJECT EXPERIENCE

International support

United Nations – Joint Caribbean Climate Change Partnership

Technical lead for the development of UNFCCC-sanctioned National Adaptation Plans for the countries of Belize and Guyana, with the goal of addressing multi-sector impacts from future climate change. Responsibilities included review of existing policies and studies supporting climate change adaptation, assessment of current adaptation plans for major economic, social, and environmental sectors, Incorporation of IPCC model results under various RCP scenarios, delivery of facilitated in-country workshops for various ministries, provision of recommendations to address gaps identified in current plans, liaison with government officials and UNDP organizers, completion of risk assessment and options analysis to identify high-value actions, preparation of capacity-building plan and 10-yr strategic plan, and risk and vulnerability assessment (including spatial aspects under various climate change scenarios – SRES and RCP).

Mexican Soda and Water Company – Monterrey Mexico

Lead for a groundwater evaluation project to supplement beverage making operations a large manufacturing plant in the city of Monterrey. Responsibilities included review of background geological, hydrogeological and geochemical information across a large study area centered on the Monterrey Metropolitan Area; assessment of structural fabric of study area including presence of major folds, faults, and other features (e.g. karst), amalgamation of background data with result from Quantum Geoelectrophysics reconnaissance program to identify prospective drilling targets, completion of a 4C

report (compare, contrast, correlate, confirm) and selection of prime drilling target for testing and evaluation.

Dept. of Environment & Resource Management – Coal Seam Gas Development, Queensland Australia

Lead for a hydrogeochemical assessment and water fingerprinting exercise in Great Artesian Basin aquifers of the Surat and Bowen basins to support Coal Seam Gas development and cumulative effects analysis. Responsibilities included a comprehensive data and information inventory to facilitate source water fingerprinting and collation of large public-domain data sets to provide a first-of-its-kind database of water quality information, review of major ions, metals and trace elements, stable and radiogenic isotopes and dissolved gases to identify recharge phenomenon, cross-formational flow characteristics and distinct water types, and statistical analysis to assess data groupings and spatial trends.

Additionally, lead for an aquifer vulnerability assessment to assess groundwater and groundwater-dependent ecosystem risks from Coal Seam Gas development in southeast Queensland. Responsibilities included development of a multi-criteria weighting and ranking system linked with GIS to display areas of highest risk to drawdown including areas users and groundwater dependent ecosystems, and facilitation of industry and government workshops to present and vet results.

Origin Energy – Coal Seam Gas Development, Queensland Australia

Groundwater lead for a large-scale coal seam gas project (up to 10,000 wells) located in the headwaters of the Murray-Darling Basin and recharge area for the Great Artesian Basin. Responsibilities included, development of a regional-scale groundwater monitoring system using vulnerability and risk mapping, design of a hydrogeological model covering a 173 000 km² area (using FEFLOW) to assess cumulative effects from coal seam gas development, completion of supporting Technical Report (including risk mapping, injection feasibility, model development) and Environmental Impact Statement chapter, and liaison with the Queensland Department of Environment and Natural Resources to address needs for the required Environmental Impact Assessment.

Texas Petroleum Company – Hydrocarbon Development, Columbia South America

Completion of an onsite environmental assessment of oilfield operations in support of the transfer of the Teca Nare, Cocorná, Velásques Oil Fields and the Velásquez-Galan Pipeline. Responsibilities included phase 1 site assessment of field operations, verification of site conditions at all well sites including soil and vegetation conditions prior to property transfer, assessment of baseline surface water and groundwater chemical conditions, as wells as environmental quality assessment to determine contamination from oilfield operations, and provision of summary report including recommendations.

Texas Petroleum Company – Hydrocarbon Development, Ecuador South America

Completion of a baseline groundwater and surface water study in a remote and environmentally sensitive area of the Amazon basin (headwaters area) to support a helicopter-assisted drilling program for oil and gas exploration. Responsibilities included field reconnaissance to establish the suitability of proposed drilling targets, assessment of the suitability of local surface water and groundwater sources for drilling fluid provision (quality and quantity), review of baseline soil quality, site hydrogeology, and geochemical conditions, and development of recommendations for pit construction and site preparation.

Canadian International Development Agency – Municipal works, Ecuador South America

Completion of a baseline soil and groundwater study (physical and chemical) around the City of Catamayo to determine the feasibility of siting an engineered wastewater impoundment for the treatment

of municipal sewage treatment (project funded by CIDA). Responsibilities included general site reconnaissance, collection of soil and groundwater samples for baseline geochemical quality assessment, review of hydrogeological conditions and processes relating to baseline conditions, and submission of recommendations on the suitability of the proposed location and possible approaches to rectify existing limitations.

Government of Yemen – National water supply, Yemen

Hydrogeological and geochemical support for a regional-scale study of water supply potential in the country. Responsibilities included hydrogeological and hydrogeochemical facies mapping, geochemical assessment and flow path evolution modelling, groundwater flow field assessment and modelling, sustainable yield evaluation, and groundwater age dating.

Blackbird Mine – Acid Rock Drainage assessment, Idaho USA

Completion of a hydrogeological baseline study and associated stable isotope investigation ($\delta^{34}\text{S}$, $\delta^{18}\text{O}$, and $\delta^2\text{H}$) to determine the source of acid mine drainage near active underground workings.

Responsibilities included review of existing geochemical data and related mineral equilibria conditions (i.e. baseline and impacted), and assessment of geochemical reactions leading to ARD conditions, including biogeochemical aspects.

Government support

Alberta Environment, Oil Sands Science and Monitoring Division

Preparation of oil sands tailings pond seepage review report. Responsibilities included review of background information pertaining to oil sands produced water (OSPW) seepage research and natural bedrock groundwater discharge studies, review of industry-submitted EPEA compliance reports to assess current “state of affairs” regarding monitoring and OSPW detections, assessment of seepage management systems, review of geological pathways for OSPW migration, and development of seepage risk profiles for all active tailings ponds.

Alberta Environment and Parks (AEP)

Provision of external expert review for the Implementation Directive for the Surface Water Body Aggregate Policy (SWBAP). Responsibilities included review of relevant Government of Alberta documents relating to aggregate mining in or near surface water bodies and/or floodplain environments, use of information from relevant policies in other jurisdictions as well as studies and research (aquatic, terrestrial, river morphology, climate risk) regarding impacts of aggregate mining in floodplain areas, identification of gaps regarding goals and objectives of the approval and management process, review of risk assessment approach to approving aggregate mines near surface water bodies, and provision of recommendations for monitoring, evaluating and reporting, and interaction with AEP project team members and presentation of results.

Also, participation on expert hydrogeology panel to development a template for groundwater management frameworks (GMFs) in Alberta. Responsibilities included assessment of background on Alberta groundwater resources and documents highlighting existing GMFs inside and outside of Canada, review of sustainability goals and challenges with groundwater management (quantity and quality), review of prevailing concepts to groundwater management (i.e. surface water capture, risk and vulnerability assessment), identification of data needs and required infrastructure to support cumulative effects management, identification of proposed indicators using DPSIR approach, and participation in

external panel and internal AEP team of hydrogeological experts to define aspects of a standardized GMF template.

Alberta Environmental Monitoring Evaluation and Reporting Agency (AEMERA)

Assessment of Alberta's groundwater observation well network, including redundancy and gap analysis. Responsibilities included groundwater risk mapping, development of a numerical scoring scheme to prioritize monitoring wells, statistical and spatial analysis of provincial water chemistries using information from the Alberta water well information database, and development of monitoring strategy including analytes and frequency to address key development activities (e.g. hydraulic fracturing, waste disposal, large-scale groundwater extractions).

Alberta Environment (AENV)

Various projects include:

- Assistance with scoping, conceptual design and development of approach to Groundwater Management framework template
- Expert review for Implementation Directive for the Surface Water Body Aggregate Policy
- Review and comment on Groundwater Monitoring Directive (2012 draft)
- Technical assistance with development of a guidance framework to respond to the implications of thermal mobilization of constituents at in-situ bitumen recovery projects including facilitation of team workshops to communicate the physical and chemical aspects of thermal mobilization and the risks posed by in-situ operations, development of a risk-based, phased, approach to assessing thermal mobilization to address source-pathway-receptor aspects, development of a draft guidance document and interaction with the AEP communications team, and support for industry and CAPP consultation meetings to review the draft guidance document.
- Completion of vulnerability and risk mapping for the Lower Athabasca Regional Planning area and development of groundwater management framework for the mineable and thermal in situ areas.
- Completion of an inventory of existing quality and quantity issues, water supply conditions and related environmental policy.
- Participation in technical and policy-related work sessions involving various stakeholder representatives.
- Assessment of potential cumulative effects from thermal in-situ bitumen recovery operations and related activities (i.e. water withdrawal for steam generation; fluid waste injection)
- Facilitation of technical and policy-related work sessions to engage stakeholders (operators, AENV and ERCB) directly affected by changes to provincial water management.

Alberta Environment and Sustainable Resource Development (ESRD)

Various projects include:

- Development of a multi-attribute point-scoring system and ArcGIS tool to assist with optimal siting of provincial monitoring wells to address concerns regarding hydraulic fracturing (HF). Responsibilities included identification of key risks to groundwater resource from HF activities, conceptualization and construction of a subsurface risk assessment, and identification of surface access opportunities in an ArcGIS platform to identify prime locations for monitoring in active and future development areas.

- Northern Athabasca Oil Sands Region groundwater monitoring program. Responsibilities included development of sampling methodology, data evaluation process and program logistics, communication to technical team comprising oil sands operators, ERCB and AEP representatives, development of an on-line visualization tool, and client liaison.
- Review of LARP management plan, supporting Groundwater Management Frameworks and supporting guidance documents re: Thermal Mobilization of Trace Elements during In Situ Developments and Groundwater Monitoring Directive.
- Preparation of summary document for Scientific Advisory Committee of the Oil sands GW working group, and Alberta Environment.

Alberta Land Use Secretariat (LUS)

Assistance with development of land planning scenarios in NE Alberta to guide future development in the Lower Athabasca Regional Plan area pursuant to the goals of the Alberta Land-use Framework. Responsibilities included presentations to the Land Use Secretariat, Regional Planning Team and Regional Advisory Council, development and assessment of modelled results from a cumulative effects simulator, completion of groundwater modelling over a 93 000 km² area (using MODFLOW), and development of an approach to deal with groundwater resources in the LARP area.

Alberta Utilities Commission (AUC)

Provision of expert review support for a wind power application in the Provost AB area. Responsibilities included review of project concept and environmental implications, assessment of completeness regarding baseline hydrogeological assessment, assessment of impact analysis and proposed mitigation, identification of gaps and provision supplemental information requests.

BC Ministry of Energy, Mines and Petroleum Resources

Provision of expert review support for hydraulic fracturing review process. Responsibilities included preparation of background information pertaining to water quality risks and source-pathway-receptor aspects of hydraulic fracturing operations, provision of recommendation regarding geochemical fingerprinting (ion ratios, isotopes, NORMs), risk assessment and mapping techniques, and monitoring, and appearance at in-camera session to discuss water quality aspects with academic panel members including recommendations.

Agency support

Alberta Innovates (AI)

Provision of hydrogeological support services for the following University of Alberta research studies:

- Resolving human versus Industrial Influences on the water quality of the Lower Athabasca River (data synthesis; geophysical and geochemical assessment; isotope geochemistry source water fingerprinting, GW-SW interaction – identification and flux)
- Review of Arsenic in Alberta's groundwater (collation of multiple open source and private data bases, GIS platform design; correlation/cluster/factor analysis to determine source/cause/reasons(s), both physical and geochemical, for elevated concentrations, development of a risk mapping tool to identify existing and potential future high-risk areas and aquifer intervals)
- Predicting Alberta's Water Future (complete estimates of groundwater recharge to Alberta's 2200 sub-basins; determining groundwater use projection by major sector to 2050; assessing baseflow contributions and groundwater stress area based analytic model outputs; project changes to provincial

water supplies based on population growth, energy extraction, food production, land use, and climate variability/change; coordinate results with climate change model outputs and SWAT model outputs to generate preliminary Water Risk map for the province.

Alberta Water Research Institute (AWRI)

Preparation of a report assessing Alberta's inventory of water and its associated dynamics (natural and human-induced). Responsibilities included the development of a partnership model including participants from Universities and Institutes in Beijing, Switzerland, Edmonton, Calgary and Lethbridge, completion of a complete inventory of surface water, groundwater and fossil water (glaciers and deep groundwater) to identify current and future risks to water supplies in the province, and assessment of climate variability and change implications to provincial groundwater water resources

Canada's Oil Sands Innovation Alliance (COSIA)

Completion of a tailing pond seepage risk assessment and preparation of a peer-review journal manuscript to place suspected oil sands impacts into perspective. Responsibilities included review of individual tailings ponds established at the various operating oil sands mines in the Athabasca Oil Sands region, application of source-pathway-receptor model in relation to calculated groundwater flow velocities, stand-off distances from receptors, and natural attenuation properties to assess risk associated with each structure, and preparation of manuscript to place into context natural discharge of low-quality groundwater from bedrock formation versus oil sands seepage.

Other projects include:

- Completion of regional geochemical assessments in NE Alberta (35,000 km² area) supporting the Regional Water Management Initiative. Responsibilities included, collation of regional geological, hydrogeological, and geochemical data using public domain and industry information, assessment and interpretation of hydrogeological setting and of conceptual models, assessment of traditional and isotope geochemistry to determine source water chemistry to define flow path phenomena areas of aquifer interactions, statistical analysis of data to determine groupings and associations (PCA analysis), and documentation and presentation of results at various public venues.
- Completion of a water disposal assessment in NE Alberta (153,000 km² area) supporting the Regional Water Management Initiative. Responsibilities included collation of regional geological, hydrogeological, and water production data using public domain and industry information, development of a multi-criteria analysis approach to assessing Injection Potential and Theoretical Injection Rates based on a system of weighted and ranked physical and chemical attributes, and development of an ArcGIS platform to identify high-value disposal formations in relation to existing and planned in situ developments and pipelines
- Completion of oil sands industry study assessing the risks and benefits of landfills, salt caverns and disposal wells in liquid waste management. Responsibilities included participation in industry workshops, assessment of liquid waste management options, documentation and presentation of the results to industry members.

Cumulative Environmental Management Association (CEMA)

Assessment of baseline hydrological and hydrogeological conditions and development of a regional-scale groundwater quality monitoring network (18 000 km² study area) located in the Athabasca Oil Sands Region of northeast Alberta. Responsibilities included refinement of conceptual hydrogeological model, groundwater-surface water interaction assessment, assessment of quality conditions and trends (including statistical analysis), knowledge and data gap analysis, pathway identification and vulnerability assessment

for sensitive receptors, field reconnaissance and well selection, isotope interpretation ($\delta^{18}\text{O}$, $\delta^2\text{H}$, $\delta^{13}\text{C}$, Carbon-14), groundwater hydrograph analysis, report preparation and presentation, and liaison with government and industry representatives.

Other projects include:

- Preparation of a groundwater monitoring and management plan in support of the State of the Muskeg River Watershed report. Responsibilities included assessment of baseline groundwater quantity and quality conditions in the study area, identification of development stresses and potential short and long-term impacts, identification of proposed physical, chemical and state indicators for monitoring, and interaction in multidisciplinary team.
- Overview of historical, current, and planned groundwater initiatives in the Regional Municipality of Wood Buffalo. Responsibilities included interviews with relevant industry, government, academia, aboriginal, and non-governmental organization groups, identifying and accessing relevant studies, reports, and investigations relating to groundwater and groundwater-surface water interaction, and development of a useable database with relevant descriptors of content and results.

Lakeland Industry and Community Association (LICA)

Assessment of the current health of two large watersheds (covering over 8500 km²) in response to changing climatic conditions, changing land use practices, and increased pressure on water resources (surface water and groundwater) by agricultural and industrial users. Responsibilities included the assessment of historical Landsat imagery, review of stream and groundwater hydrograph data, assessment of effects of climate phenomena on basin hydrology, development of a hydrogeological framework from over 11,500 water well records, and review of temporal quality data from lakes and water wells.

Petroleum Technology Alliance of Canada (PTAC)

Completion of studies and industry workshops assessing environmental net benefit of saline water use versus non-saline water use in unconventional oil and gas development and the role of collaboration in unconventional oil and gas development.

Municipal and Watershed Stewardship Groups

Butte Action Committee

Preparation for, and participation in, AEP-led Surface Water Body Aggregate Policy 2017 stakeholder review workshops. Responsibilities included consultation with stakeholder group, provision of support for Leduc workshop, review of AEP materials in advance of Airdrie workshop (AEP policies, guides, codes, risk assessment framework), review of other Canadian and International policies and guides to aggregate mining near water bodies, review of impact studies related to aggregate mine development near surface water bodies (erosion, pit capture, infrastructure risk, fisheries and riparian area impacts), assessment of climate change implications for streamflow timing and magnitude, as well as intensity, duration, and frequency of storms and related runoff, on 1:100 levels, and documentation of questions to AEP for clarification and response to AEP questions re: climate change implications.

Red Deer River Watershed Alliance (RDRWA)

Assistance with development of an Integrated Watershed Management Plan to address future development in the basin. Responsibilities included assessment of aquifer types and groundwater inventory, water use patterns, effects of land use and climate variability/change on basin storage, assessment of water quality conditions, risk and vulnerability analysis, development of beneficial

management practices, and development of a conceptual monitoring system to achieve plan goals and objectives.

South McDougall Flats Protection Society, Sundre AB

Review of proposed re-zoning for aggregate mine development in historic floodplain of Little Red Deer River in Sundre, AB. Responsibilities included review of proposed gravel pit re-zoning area, air photo assessment and delineation of paleo-floodplain. preparation and presentation of workshop materials at public forums re: pros and cons of gravel mining (including policy framework review), and support for Town Council hearing.

Town of Okotoks, AB

Assistance with review of development applications and support for ensuring water security through conjunctive use strategies. Responsibilities included expert review of development applications assessing cumulative drawdown effects and provision of recommendations to manage effects, engagement with Town official on development of a sustainable water management strategy, and provision of support for AENV and Environmental Appeal Board process.

Also, completion of a pre-feasibility study to assess aquifer storage and recovery (ASR) and managed aquifer recharge (MAR) as a solution to water supply challenges. Responsibilities included review of regulatory setting and constraints for ASR and MAR (Canada and international jurisdictions), review of ASR and MAR projects world-wide, assessment of local geological and hydrogeological conditions and identification of potential areas to facilitate ASR and MAR success, modelling to determine optimal placement of MAR system to enhance baseflow conditions, groundwater-surface water interaction assessment, and preparation and presentation of pre-feasibility summary to Town Council and Mayor.

Town of High River, AB

Lead for the development of a Water Sustainability Plan predicated on risk identification and alternative storage and management options for a large alluvial aquifer system. Responsibilities included concept and program design, execution of vulnerability mapping approach to assess risk to High River from groundwater impacts (e.g. underground storage tanks), development of conceptual hydrogeological framework, review of groundwater-surface water interaction and climate variability effects, assistance with groundwater model development, and liaison with town officials, MD Foothills official and other project stakeholders.

Tsuu't'ina First Nation

Completion of flood analysis for the Redwood Meadow development on the Elbow River floodplain. Responsibilities included review of river hydrology, flood frequency, and related changes in river morphology, assistance with hydrological modelling to address groundwater flooding potential to existing and planned development areas, calculation of damage estimates associated with 5-, 20-, 100-, 200- and 500-year return periods, and liaison with First Nations representatives, Government of AB, and Canadian Environmental Assessment Agency.

Industry support

Alberta Energy Company (AEC)

Preparation of an Environmental Operations Manual for all aspects of petroleum exploration and development in Alberta. Contents of the manual included environmental procedures for seismic outline

provision and reclamation, siting and construction of drilling leases and processing facilities, siting and construction of pipeline right of ways, spill response and cleanup, and site reclamation.

Amoco Canada

Various projects include:

- Numerous gas plant and battery investigations, including the completion of geophysical surveys (EM38, EM31, and EM61), and the design, installation, testing and sampling of groundwater monitoring networks.
- Completion of environmental site assessments and landfill delineation programs for gas plant divestitures. Responsibilities included installation, testing and sampling of groundwater monitoring wells, completion of soil sampling programs, and assessment of the results to determine the liability cost associated with property transfer.
- Completion of a stable isotope study using $\delta^{34}\text{S}$, $\delta^{18}\text{O}$, $\delta^2\text{H}$, $\delta^{13}\text{C}$ to determine the source of anomalous groundwater sulphate concentrations (natural vs. anthropogenic), and review of fresh groundwater usage for steam injection. Responsibilities included assessment of historical monitoring well and lake level readings to evaluate local effects resulting from groundwater withdrawal.
- Sounding Lake area monitoring program to determine effects from nearby drilling activity. Responsibilities included interviews with well-owners, assessment of the water delivery system, short-term aquifer testing, sample collection using ultra-clean sampling methods, evaluation of the data, and communication of results to client and owner.

Apache Canada

Completion of watershed analysis and intake siting in support of a Water Act Application on Smoky Lake. Responsibilities included assessment of Smoke Lake watershed and water supply potential, water supply modelling to determine availability and reliability of lake water, review of historical flow data and determination of suitable IFN at outlet (i.e. Q80), review of terrestrial, fisheries and water quality data to support water diversion strategy, development of proposed monitoring and response plan, and liaison with AEP and AER representatives.

Bellatrix Exploration Ltd.

Completion of a Water Sourcing study for Rocky Mountain asset. Responsibilities included review of existing and potential water sourcing options, development MCA and of GIS tool to assess and map high-value water opportunities, and completion of a corporate water security plan.

BP Canada

Resident well sampling program to determine effects from nearby drilling programs and existing gas wells. Responsibilities included well-owner interviews, assessment of the well conditions and water delivery system, sample collection using ultra-clean sampling methods, and communication of results.

Canadian Occidental

Completion of a stable isotope studies to determine the source of sulphate impact from two large sour gas processing facilities (Balzac and Okotoks). Responsibilities included drilling, installation, and testing of monitoring wells, development of a conceptual site model, review of site-wide geochemistry (soil and groundwater), and application of $\delta^{34}\text{S}$, $\delta^{18}\text{O}$, $\delta^2\text{H}$, and $\delta^{13}\text{C}$ isotopes to resolve natural versus anthropogenic influences.

Devon Canada

Various projects include:

- Development of a thermal mobilization risk model to support development efforts in the Jackfish and Pike oil sands developments. Responsibilities included review and evaluation of existing geochemical data including metals and trace elements, development of conceptual site model using existing geological picks for various identified formations, design of Spatial MCA approach to map risk of thermal mobilization from artificial ground heating, and preparation of summary document and presentation at various public venues.
- Completion of detailed studies to define baseline hydrogeological and hydrological conditions in support of a CBM project in the Crowsnest Region of the eastern Rocky Mountains. Responsibilities included, completion of detailed field reconnaissance program, establishment of a spring and water well monitoring network, investigation of surface water/groundwater interactions, development of a conceptual hydrogeological framework in a mountainous area using geological and geochemical data, groundwater age dating of regional confined aquifers using radioactive isotopes (i.e. Tritium and Chlorine-36), and public and regulatory liaison.
- Hydrogeological support for D51 disposal application. Responsibilities included refinement of conceptual model and identification of hydrodynamic conditions supporting disposal water entrapment by stagnation zone using geochemical and isotope evidence.

Enerplus

Completion of a Water Security Plan for the Western Canadian assets. Responsibilities included review of asset operations and water management process, assessment of basin water risk conditions and current mitigations in place, source water and disposal opportunity assessment, and development of multi-criteria assessment (MCA) process to rank water risk profile of each asset and provide recommendations for mitigation.

Graymont Western US Inc.

Preliminary development of a mine dewatering and water management strategy for a large limestone quarry located in the eastern front ranges of the Rocky Mountains. Responsibilities included assessment of baseline hydrogeological and hydrogeochemical conditions in a mountain environment, source water fingerprinting and groundwater age-dating, fracture and lineament analysis using structural geology and geophysical analysis (GPR, borehole tele-viewer), groundwater-surface water interaction assessment (i.e., Bow River), conceptualization of dewatering strategy utilizing oriented and horizontal well technology, and issues identification and risk analysis.

Hammerhead Resources

Completion of watershed analysis, flood assessment and intake siting in support of a Water Act Application on the Smoky River. Responsibilities included assessment of Smoky River watershed and water supply potential, review of historical flow data and assessment of Q80 and Q95, flood assessment to determine 1:10 and 1:25 year event levels, review of fisheries and bank stability assessment in support of intake siting, development of proposed monitoring and response plan, and liaison with AEP and AER representatives.

Husky Oil Operations Ltd.

Completion of a water security plan for the Ansell asset, west-central Alberta. Responsibilities included review of project water profile and future requirements for hydraulic fracturing, facilitation of risk review

workshop, and review of water source opportunities and development of MCA opportunity ranking process.

Also, completion of a Water Security Plan for a 200,000 barrel per day thermal in situ oil sands operation. Responsibilities included, review of water supply and disposal needs for the duration of the planned project, risk and opportunity analysis using multi-criteria analysis to ensure viability of supply and disposal strategies, and identification of strategies to ensure project viability and project sustainability.

Imperial Oil

Various projects include:

- Completion of field and bench-scale tests to determine facilitated mobility of metals, trace elements, and dissolved organics resulting from artificial ground heating around thermal in situ wells. Responsibilities included drilling, installation, testing, and sampling (soil and water) from 22 deep (up to 90 m) monitoring wells at a newly established thermal in situ pad to determine baseline geochemistry and groundwater flow directions, tracer experiment to determine groundwater flow velocities in a deep (>80 m) confined aquifer, collection of sediment samples (under anoxic conditions) for bench-scale heating experiments to determine metals mobility and related kinetics, review of stable isotopes in groundwater and dissolved gases to determine effects of heating from in-situ thermal wells on local geochemical conditions (inorganic and organic constituents), reaction path modelling to determine processes influencing changes metals concentrations and biological activity resulting from subsurface heating, determination of activation energies for metals release, and the role of biogeochemical reactions in facilitating metals release, transport and fate modelling to determine the long-term risk of thermal mobilization of metals (and other related constituents) to the surrounding environment, and documentation of result and liaison with client and regulatory agencies.
- Design and implementation of dewatering program for large process water ponds. Responsibilities included review of site geological conditions, installation of dewatering wells, acquisition and interpretation of aquifer test data, design of dewatering system using appropriate theoretical calculations and analytical modelling solution, and development of dewatering plan and associated performance monitoring
- Completion of a regional groundwater investigation and development of a regional-scale ground water monitoring network (per EPO 95-07 requirements) in a multi-layer inter-till aquifer system in east-central Alberta. Responsibilities included assessment and interpretation of Quaternary stratigraphy, interpretation of seismic line data and geophysical borehole log analysis, regional groundwater flow mapping, geochemical facies mapping, assessment of regional arsenic concentrations, trends, and potential connection to thermal in situ development activities, groundwater age-dating and stable isotope analysis ($\delta^{18}\text{O}$, $\delta^2\text{H}$, $\delta^{34}\text{S}$, $\delta^{11}\text{B}$ and $\delta^{13}\text{C}$: dissolved constituents and gases), preparation of investigation report to address EPO questions (i.e. source and cause of groundwater quality issues), and liaison with regulators during investigation and EPO closure process.
- Completion of an environmental liability assessment to determine the cost of decommissioning, abandoning and restoring the area currently occupied by the Norman Wells field. Responsibilities included completion of a Phase 1 audit of production facilities and supporting infrastructure (i.e. wellheads, pipelines, satellites, batteries and former refinery), design and implementation of a late Fall field program to sample a statistically sufficient number of locations to generate realistic liability costing for field shutdown and closure, generation of a summary report, and assistance with design of liability costing model and summary reporting.

- Completion of numerous isotope studies using to determine groundwater flow rates in regional confined aquifers and the source of anomalous groundwater quality conditions and dissolved gas concentrations near a large heavy oil recovery operation using assessment of $\delta^{18}\text{O}$, $\delta^2\text{H}$, $\delta^{34}\text{S}$, $\delta^{11}\text{B}$ and $\delta^{13}\text{C}$ and Tritium and Carbon-14 for groundwater age-dating.
- Tritium age dating of groundwater in Norman Wells, NWT to determine vertical groundwater flow characteristics in discontinuous permafrost environment
- Development and implementation of a site characterization program at a former refinery and battery (circa 1930s) located approximately 160 km south of the Arctic Circle. Responsibilities included the design and installation of a monitoring network in discontinuous permafrost, and assistance in development of assessment programs to generate Tier II criteria in support of a human health and ecological risk assessment.
- Support for re-licensing of supply wells for oilfield injection using Alberta Environment “Water Conservation and Allocation Guideline for Oilfield Injection” and “Groundwater Evaluation Guideline.” Responsibilities included, completion of field-verified surveys, review of site geological conditions, acquisition and interpretation of aquifer test data, assessment of groundwater/surface water interaction, and determination of long-term sustainable yield using analytical solutions
- Hydrogeological lead for a large oil sands mine EIA (Kearl Oil Sands Mine Project). Responsibilities include evaluation and interpretation of water well information and chemical data, defining Quaternary stratigraphy, temporal water level assessment to determine potential impact to regional groundwater quality and quantity arising from mine development and dewatering, and support at Joint Panel hearing.
- Cold Lake area monitoring program (Arsenic Investigation – 30 private residents). Responsibilities included interviews with well-owners, assessment of the water delivery system, sample collection using ultra-clean sampling methods, review of the data, and communication of results to client, well owner and Alberta Environment
- Completion of an environmental liability assessment and costing exercise in support of the sale of the Judy Creek field to PenGrowth Corp. to statistically sample a sufficient number of facilities to generate realistic liability cost for property transfer. Responsibilities included completion of Phase 1 audits of production facilities and supporting infrastructure (i.e. wellheads, pipelines, satellites, and batteries), design and implementation of winter field program to sample facilities to generate realistic liability cost for property transfer
- Conceptual model design for dewatering scheme in support of mine development. Responsibilities included assessment of geological conditions, boundary assessment, parameter selection and optimization, and assessment of model results
- Completion of a groundwater modelling study to determine the sustainable yield of a major deep freshwater aquifer in the Cold Lake area. Responsibilities included the provision of hydrogeological support for model conceptualization and design, input parameter selection, and evaluation and communication of results
- Development and implementation of a regional groundwater quality monitoring network covering an area of 1,200 km². Responsibilities included, regular interaction with environmental regulatory agencies and the local landowners, installation, testing and sampling of deep (up to 230 m) monitoring wells to assess potential impact to confined aquifers due to production well casing failures, design, implementation and interpretation of aquifer tests in support of groundwater remediation programs, and development of cost effective approaches towards restoring water quality conditions in deep aquifers influenced by heavy hydrocarbons and associated production fluids.

- Preparation of an AB environment approved Incident Response Plan to deal with groundwater quality issues identified during routine monitoring activities at a large heavy oil recovery scheme. Responsibilities included design of a cost-effective sampling schedule including rationalization of a 200 well monitoring network to provide a meaningful network of approx. 100 wells, and development of statistical limits for response and mitigation actions.

Japan Canada Oil Sands (JACOS)

Execution of hydrogeological section of an expansion EIA for the Hangingstone Thermal In Situ Oil Sands project. Responsibilities included development of baseline hydrogeology, EIA sections, and SIR responses, liaison with project team and governing agencies, and stakeholder consultation with First Nations and 3PC.

Also, completion of a water supply project in support of a heavy oil recovery scheme using Alberta Environment "Water Conservation and Allocation Guideline for Oilfield Injection" and "Groundwater Evaluation Guideline." Responsibilities included assessment of geophysical logs and EM survey results, design and implementation of field programs, step rate test and constant rate test data acquisition and analysis, well screen selection and well design, well efficiency assessment, and use of pertinent analytical equations to predict effect of long-term pumping.

Mobil Oil Canada

Completion of a stable isotope study to determine the source of sulphate impact from a large sour gas processing facility. Responsibilities included, drilling and installation of monitoring wells, development of a conceptual site model, review of site-wide geochemistry (soil and groundwater), and application of $\delta^{34}\text{S}$, $\delta^{18}\text{O}$, $\delta^2\text{H}$, and $\delta^{13}\text{C}$ isotopes to resolve natural versus anthropogenic influences.

Nexen ULC

Development of a water strategy to service the Aurora LNG project/Dilly Creek asset. Responsibilities included assessment of development trajectory with respect to water use, identification of feasible water supply source to accommodate up to 6.5 million m^3 per year of water, conceptualization of water storage strategy to reduce pressure on local water sources and minimize physical footprint of development, development of a water conveyance strategy utilizing existing rights of way, including Class 5 cost estimation, and liaison with Fort Nelson first Nations to facilitate development of baseline hydrology monitoring program and facilitation of a Section 10 water licence (following successful EAB appeal of previous licence).

Also, the design and completion of bench-scale testing to determine the mobilization of metals and trace elements under applied heating. Responsibilities included conceptual design of experimental process in collaboration with AGAT lab representatives, assessment of frozen core samples and selection of appropriate intervals for physical (grain size, mineralogy via XRD) and chemical testing (total metals, leachable metals), assessment of results from sequential batch heating experiments extending from 5-100°C for metals species released to solution, geochemical modelling of kinetic experiment results to determine activation energies of metals release, completion of attenuation experiments to determine potential for mobilized metals to re-associated with sediments under cooled conditions, and preparation of suitable documentation to present to the client and AER.

Pembina Pipeline Corporation

Provision of expert legal support to review source and cause of industrial chemical contamination at an operating gas plant. Responsibilities included review of existing site investigations, procedures, and documentation, assessment of efficacy of investigations and protocols (field and laboratory), development

of conceptual model to explain presence and movement of sulfolane in bedrock deposits, and review of risk assessment findings and provision of recommendations to close data and information gaps.

Petro-Canada

Various projects include:

- Completion of detailed regional and local baseline studies, and cumulative impact assessment, to establish regional and local hydrogeological and geochemical characteristics in support of a 30,000 bbl/d heavy oil recovery expansion (MacKay River Project). Responsibilities included defining Quaternary stratigraphy, temporal water level assessment to determine potential impact to regional groundwater quality and quantity arising from bitumen recovery operations, development of a numerical groundwater model to assess long-term effects of water withdrawal and waste disposal to support project activities, and completion of climate change assessment formed part of the assessment for project design.
- Conceptualization and design of field program to assess water supply and water disposal for two major heavy oil projects (>30,000 bbl/d). Responsibilities included selection of drilling locations based on geophysical reconnaissance, implementation of field programs, step rate test and constant rate test data acquisition and analysis, well efficiency assessment, well screen selection and well design, and use of pertinent analytical equations.
- Review of fresh groundwater use for a water flood project. Responsibilities included interpretation of historical monitoring well data to determine the effects of the groundwater withdrawal from the local aquifer.
- Assessment of long-term effects of industrial water supply wells used for a water flood scheme. Responsibilities included a review groundwater chemistry and well hydraulic data to determination sustainable production rates.
- Completion of an environmental operations audit and subsequent industrial landfill delineation to determine the source area of possible groundwater contamination. Responsibilities included completion of a comprehensive intrusive landfill delineation and soil sampling program to determine the extent and volume of landfill contamination.
- Completion of an industrial landfill delineation project to determine possible sources of groundwater contamination. Responsibilities included completion of a magnetometer survey, follow-up excavation and soil sampling near a decommissioned landfill to determine the presence, extent and volume of residual landfill material.

Procor

Review of operational history of a salt cavern storage facility including an assessment of groundwater quality near the large brine storage ponds and the potential for impact to the Regina Aquifer.

Shell Canada

Various projects include:

- Completion of watershed analysis and intake siting in support of a Water Act Application on Iosegun Lake. Responsibilities included assessment of Iosegun Lake watershed and water supply potential, water supply modelling to determine availability and reliability of supply, review of historical flow data and determination of suitable IFN at outlet (i.e. Q80), review of terrestrial, fisheries and water quality data to support water diversion strategy, development of proposed monitoring and response plan, and liaison with AEP and AER representatives.

- Hydrogeological support for Jackpine Mine Expansion EIA
- Development of Groundwater Management Plan and annual monitoring support at Shell's Muskeg River Mine. Responsibilities included review of site-wide groundwater monitoring network for applicability to EPEA Approval requirements (including gap analysis, routine monitoring and reporting per EPEA requirements, selection of indicator suites to facilitate routine monitoring, evaluation, and reporting, identification of locations with water quality concerns, development of approach to statically assessing and responding to data excursions and trends, and preparation of the GMP for consideration and acceptance by AEP.
- Support for Carmon Creek EIA and assessment of brackish water supply potential in support of heavy oil operations in the Peace River area. Responsibilities included assessment of baseline hydrogeological conditions and potential impacts from project development, preparation of climate change assessment for project development, support for SIR submissions and EIA team interactions, feasibility assessment of potential for deep formations to produce sustained supplies and conceptual well-field development, and liaison with regulatory agencies
- Development of a regional-scale ground water monitoring network in a multi-layer aquifer system in the Peace River region of Alberta. Responsibilities included assessment of Quaternary stratigraphy, interpretation of seismic line data, geophysical borehole log analysis, and geochemical facies mapping and solution chemistry analysis.
- Assistance with the development and construction of an induced infiltration groundwater supply system for the Shell Caroline Gas Plant industrial water supply project. Responsibilities included drilling and installation of large diameter water production wells, borehole geophysical logging and interpretation, sand quantification testing and analyses to determine sediment production volumes prior to pipeline construction, and liaison with client and local landowners.

Suncor Energy

Various projects include:

- Lead subsurface specialist for a multi-criteria decision analysis and life-cycle value analysis in support of a regional brine management strategy in the Athabasca Oil Sands area. Responsibilities included development of a holistic weighting and ranking approach to address triple-bottom-line assessment of treatment and disposal options for liquid and solid waste streams originating from oil sands mining and in situ assets located across a 30 000 km² area, facilitation of, and participation in, workshops to assess viable options for treatment and disposal including Class 4 costing, and development of a constraints mapping approach (vulnerability, risks and opportunities) using ArcGIS to assist in management and disposal options for liquid and solids waste streams.
- Development of an Athabasca River reconnaissance program to identify and sample natural groundwater-surface water interaction zones discharging waters from the Cretaceous and Devonian formations. Responsibilities included planning/execution and interpretation of a marine-based geophysical program using EM31 imaging and bathymetric readings, development of pore water sampling program including geochemical assessment of waters and source fingerprinting (major ion, trace element, dissolved organics, and stable and radiogenic isotopes), interpretation of results and presentation at various venues (government, industry).
- D51 disposal monitoring at the Firebag Thermal In Situ Project
- Thermal mobilization assessments (Firebag, Lewis, Meadow Creek)
- Development of brine water management strategy including options analysis and Class 4 costing

- Preparation of an oil sands mining closure strategy outlining goals, objectives, tasks, timelines, and consulting and research agencies to execute in support of Life of Mine Closure and Reclamation process
- Assistance with Fort Hills Operational Plan regarding preservation of McClelland Lake and wetland complex; review of physical hydrogeology and geochemical setting; assessment of numerical model design and output; review of cut-of wall design and mitigation system; review of adaptive management processes
- Review of Devonian – McMurray interactions at the North Steepbank mine expansion and assistance with investigation program design (including geochemical assessment)
- Completion of geophysical and porewater surveys on the Athabasca and Steepbank Rivers to determine contributions of natural discharge versus industry inputs
- Review of existing water supply for Steepbank and Millennium mine operations and development of contingency supply options. Responsibilities included review of past water resource evaluations, development of geophysical investigation program and interpretation of results, assessment of contingency water supply (groundwater and operations water), client consultation and liaison with Alberta Environment, and implementation of horizontal well technology to provide a secure supply of water for continued operations
- Groundwater age-dating and source area identification in support of active tailings pond seepage investigations. Responsibilities included conceptual site model design, review of traditional geochemistry to determine end-point water types, and application of Tritium, $\delta^{18}\text{O}$, $\delta^2\text{H}$, $\delta^{34}\text{S}$, $\delta^{11}\text{B}$ to resolve geochemical setting and potential areas of seepage
- Preparation of an AB Environment approved Groundwater Management Plan at a large oil sands mining operation. Activities included, the design of a cost-effective sampling schedule including rationalization of over 300 wells to establish a meaningful monitoring network of 150 wells, development of statistically established trigger values for response and mitigation, and liaison with Government of Alberta during review and approval.

Syncrude Canada

Participation on expert hydrogeology panel to review Devonian investigation program for Aurora mine and assess mitigation strategies to control high risk areas (Les Gray - UBC, Carl Mendoza, - UofA, Ken Baxter - Golder, Jon Fennell - WP). Responsibilities included review of existing baseline data for active mining site, identification of high-risk areas to consider for future investigation and monitoring, participation in group workshop settings to communicate findings and accumulate input for recommendations refinement, and participation in internal panel meetings to discuss concepts and develop final recommendations.

Teck Resources Limited

Evaluation of stream response to groundwater interception in support of fisheries habitat offsetting at Line Creek Mine, BC. Responsibilities included baseline reconnaissance of Line Creek alluvial system and GW-SW water interactions with Line Creek, assessment of area springs, shallow groundwater, and creeks to determine geochemical quality and flow conditions (using drive point well technology and data logger systems), completion of ground penetrating radar survey to map thickness and morphology of alluvial deposits, water quality fingerprinting using major ion, trace elements (in particular selenium) and stable isotopes to determine interaction of groundwater environment with Line Creek, and assessment of selenium mobilization conditions related to active mine workings and development of a conceptual (passive) mitigation strategy to offset impacts to fisheries habitat.

Total E&P

Support for Joslyn North Mine EIA submission and development of a mine dewatering strategy for. Responsibilities included development of baseline hydrogeology, EIA sections and SIR responses, liaison with project team and governing agencies, joint Panel hearing support.

Also, selection and phasing of depressurization wells and associated monitoring wells, review of deep well injection potential, including geochemical compatibilities of waters, development of a performance monitoring system, selection of pipeline route, and preparation of a design-based memorandum with related costs (Class 3) of implementation and long-term operation.

Various Gas Plants, Batteries and Refineries (Alberta, British Columbia, Saskatchewan)

Completion of piezometer network design at numerous operating facilities to assess the potential impact to local groundwater quality resulting from industrial activities and extent of contaminant migration from known source areas (Imperial Oil, Shell, Mobil, Canadian Occidental); and, provision of hydrogeological services in support of a gas plant decommissioning (ongoing). Responsibilities include, well installation, testing and sampling, involvement in a site-specific risk assessment (ecological and human health), development of sampling protocols, and assessment of cost-effective remediation techniques to address various contaminant situations in both soil and groundwater.

Various Oil and Gas Facilities (Alberta, Saskatchewan)

Completion of environmental operations audits and development of waste management plans for numerous operating oil and gas facilities (Amoco, Petro-Canada, Shell). Responsibilities included review of historical operations files (spill reports, waste handling procedures, EUB and AENV records), completion of site inspections and interviews, and historical air photo analysis and interpretation.

EDUCATION

Ph.D. (Geochemistry) – University of Calgary, 2008

M.Sc. (Physical Hydrogeology and Isotope Geochemistry) – University of Calgary, 1994

B.Sc. (Geology: hard rock, sedimentology, mineralogy, structural, geochemical) – University of Saskatchewan, Saskatoon, 1985

REGISTRATIONS & AFFILIATIONS

APEGA (P.Geol. – Alberta)

EGBC (P.Geo. – British Columbia)

APEGS (P.Geo. P.Eng. – Saskatchewan)

NAPEG (P.Geol. – Northwest Territories and Nunavut)

National Ground Water Association (NGWA)

International Association of Hydrogeologists

Canadian Water Resources Association (CWRA)

Sustainable Energy Development Program (Univ. of Calgary) – External Advisory Board – 2017 to present

Bow River Basin Council (Calgary), Board of Directors (2008-2013), Chair of Monitoring and Modelling committee (2008 to 2012), Member of Legislation and Policy Committee (2006-2011), Member of Integrated Watershed Management Group (2007 to 2010)

SPECIFIC TECHNICAL EXPERTISE

- ICP-MS, GC-MS, Ion chromatography (LC-MS, HPLC, IC)
- SEM, XRD (bulk and clays), XRF, EDS and Synchrotron Light (XANES, and EXAFS)
- Isotope ratio mass spectrometry (IRMS)
- Solid-phase extraction, Alumina fraction, and sequential soil extraction
- Toxicity identification evaluation for metals and organics
- Selection of appropriate inorganic or organic analytical techniques based on Standard Methods for Water and Wastewater
- Statistical analysis (e.g. population testing, trend analysis, control charting, PCA, HCA, spatial analysis)
- Multi-criteria decision analysis (MCDA)
- Vulnerability and risk mapping
- Risk assessment (human and ecological)
- Climate tele-connections assessment, climate model analysis and impact identification, development of adaptation strategies

To The Attention Of: Ms. Jacqueline Targett, Sr. Development Officer Rocky View County

Good Morning Jacqueline,

Please find my response to the development application by 1410266 AB Ltd. for Phase 1 of a gravel extraction operation adjacent to my personal property attached above.

The courtesy of a written confirmation of receipt of my response would be appreciated.

Thank you in advance.

Regards,

Larry Stock

VIA EMAIL

RE: PRDP20211744
Natural Resource Extraction/Processing Phase 1 Summit Pit
Roll 06731002 / 06731004

To: Jacqueline Targett, Senior Development Officer

I am writing to voice my **strong opposition** to the issuance of a development permit to the applicants noted above for reasons stipulated below.

As a Rocky View County resident (35+ years) residing on the NW30T26R3W5M located 1.5 miles south of the location in question on rising terrain that sits approximately 100 ft. above the subject sites, and already impacted by two existing gravel extraction operations, one located east of Big Hill Springs Provincial Park, the other located 1/2 mile west of Range Road 40 immediately south of Highway 567. I oppose the 1410266 Alberta Ltd. development permit application as it relates to noise, airborne particulate matter, highway traffic impact, property devaluation, and cumulate effect of multiple existing gravel pit operations on myself, my family, and existing rate payers in this part of Rocky View County. Further, it is my view that until an independent assessment undertaken by Alberta Environment can be completed on the potential impact to the water source for Big Hill Creek Provincial park, this application should be postponed.

It should be noted that Phase 1 of this project provides for the least amount of visual impact to the existing aesthetics of the Highway 567 corridor so as not to impact the driving public. It will however, provide the largest visual, noise, and dust impact to my property specifically as it is the closest to the SE portion of Phase 1.

Thank you in advance for the opportunity to comment.

Larry Stock
264160 Range Road 40
Rocky View County AB

2 July 2021

Ms Jaqueline Targett

Senior Development Officer

Re: Application PRDP20211744

Dear Ms Targett:

Our family remains opposed to the development of the Mountain Ash Limited Partnership (Summit) gravel pit and will encourage AEP to deny the necessary permits to commence development and operation if the Rocky View Council does not recognize the overwhelming flaws in the proponent's application. We have reviewed studies that demonstrate such a project would have a devastating effect on our quality of life and the protection of water quality for the Big Hill Springs Provincial Park. We must question anyone who chooses to ignore the validity of these concerns. We recognize that this current process underway with the RVC council does not specifically address the issues to approve or refuse the development permit, and thus will present the concerns and considerations that must be addressed in the development permit.

Protection of Groundwater Quality:

A recent followup study by Dr. Jon Fennel (June 10, 2021) was completed to assess the risk of introducing water quality contaminants to the local domestic use aquifer (DUA). The term DUA is important in this context because the Alberta Water for Life policy expressly prohibits the release of contaminants that will impair DUA water quality, and there is no question that the aquifer that supplies our well and our neighbours east of the proposed pit is part of that DUA. Dr. Fennel simulated the effect of precipitation and runoff infiltrating a one metre column of gravel, which represents the one metre buffer that the proponent intends to leave above the local water table in the pit. The source of the gravel in this simulation was taken from the Hillstone Aggregates Pit, which is reasonably representative of the material that would exist in the proposed Summit Pit. Dr. Fennel's study proved that high levels of turbidity and dissolved heavy metals were mobilized in the leachate sample from the gravel column. We note in particular, that the levels of iron, manganese, aluminum and turbidity may have an adverse impact on the quality of our domestic water. The consequences for the springs in the provincial park, and the local creek and ecosystem would be even worse.

The proponent's claim that the naturally-occurring water quality parameters would be diluted by the contribution of groundwater flow are not substantiated by any studies, and are particularly flawed when considered in the protection of the park ecosystem. Dilution does not

make these parameters go away. Over time, the sensitive ecosystem will indeed receive these contaminants and the natural flora and fauna will imbibe these contaminants at whatever concentration presented. Slime from iron ochre is a real possibility that could foul the water in our wells and in the park. Using dilution as an excuse is irresponsible and defers the potential problem to the next generation. By that time the results may not be reversible.

Therefore, we suggest that further studies are necessary to assess the risk of mobilizing the naturally occurring water quality concerns in the gravel that would occur. We believe that these studies should be done by an impartial third party and paid for by the proponent. If this is not resolvable, then Dr. Fennell's recommendations for buffer areas and minimum separation of at least 4 m from the bottom of the finished pit and the high watertable mark must be observed and built into any permits.

Noise:

We note, with some suspicion, that the municipal noise bylaw has been recently modified and that noise limits are no longer expressly stated. However, this local area is still home for several residents in the area and we would want assurance through enforcement that noise levels would be controlled and enforced. The proposed increase from 50 dba to 65 dba is not acceptable to us. As noise levels in decibels are a logarithmic scale, this increase would more than double local noise levels. We bought our property in an agricultural area (not in the heart of an industrial belt) so we could enjoy peace and quiet.

Dust:

We have submitted photographic evidence on numerous occasions that fugitive dust emissions from local gravel pits west and south east of our location are very difficult to control. The latest photographs taken from the Hillstone Pit show the magnitude of the issue, and the pit was not operating at the time. Despite the claims of a "world-class" facility by the proponent, we have very little reason to expect that MALP will be any more successful at mitigating dust plumes out of the pit, nor can we be assured that they will take any further care to control the amount of dust tracked out of the pit on dump trucks. Dust is a health concern that affects all of us who live near the proposed pit and those who will use Highway 567. Dust control plans and defined action levels must be developed. If sustained control of the dust levels is not achievable, diminished operation or immediate closure of the pit must be enforced.

Highway Traffic:

The proposed intersection improvements near Range Road 40 will do nothing to abate the issues with sight lines and traffic congestion on the section of road between the entrance to Big Hill Springs Park and Range Road 35. Access and egress from Range Road 35 at the intersection with Highway 556 will be tedious and may become hazardous. Issues with west bound gravel trucks climbing the hill and backing up traffic approaching Range Road 35 and with east bound

vehicles braking to access the park with trucks behind them should be studied and resolved before the pit could become operational.

The above issues represent concerns that we expect Rocky View County to intervene upon our behalf as long term residents and taxpayers. In the interim, we feel the County should do more to fulfill its due diligence.

Morley and Linda Kostecky

Ms Jacqueline Targett

Senior Development Officer

Re: Application PRDP20211744

Dear Ms Targett:

Our family resides on the northwest 20 acre parcel of SW32-26-3W5, 800 m directly east from the first phase of the proposed Summit Gravel Pit. We have been vocal in our opposition against this application since its initial introduction and our stance has not changed. Given the concerted opposition of the local community adjacent to this proposed development, the documented concerns of the Regional Director for the Big Hill Springs Park, versus the callous attitude of the six Rocky View councillors that seem to vote as a cabal, I am already sensing the futility of responding to your correspondence dated 13 May 2021. Our property tax notice arrived in the same bundle as your letter; I guess that was incentive enough to make one more effort to be heard. It is disconcerting that the people that we pay to make decisions for our community do not listen to the people that pay their salaries.

I have attempted locate the Development Permit on the Rocky View County website by searching for the application number, but I could not find a matching document. Could you please send us either the PDF of the document that you intended for public review, or a link to help us find the document?

For the record, I would like to address a few disturbing issues from the “hearing” from March 2nd regarding this application:

Councillor Boelke’s concerns about the missing APEGA seal on the Jon Fennell report were without grounds. Dr. Fennell used his title on the report which included his “P. Geol” designation. This designation carries the same weight as the professional seal. Given the disdain that Councillor Boelke leveled at major components of the opposition’s presentation, I have to question if he had even read it, and thus was he really prepared to cast a vote on such an important decision?

Councillor McKylor’s absurd notion that the community opposition to the Summit Pit application had a chance to “work out” issues with the proponent in December 2020, when Dr. Fennell contacted the engineering consultant for Mountain Ash to inform them that he would be reviewing their report. This notification is an implied obligation in the APEGA Guidelines to Ethical Practice; there was no report to discuss with the proponent in December 2020. I would point out that the Fennell report that was released in February 2021 offered recommendations to reduce the risks associated with gravel pit operation, which were soundly rejected by the proponent. I ask Councillor McKylor: who, then, “refused to come half way?” Does she seriously believe that the proponent could be convinced, under any evidence, to

admit that this proposal puts Big Hill Springs Park at risk?

Given that Councillor McKylor stated that she “did not trust” either the MALP or the Fennell reports, but she was aware of the Alberta Environment and Parks concerns stated in their correspondence from 17 February 2021, I question how she could support the application? It would have made more sense that she either abstain or vote to withhold the redesignation until the Park’s request could be addressed.

When the councillors reconvene to ratify the development permit, they should carefully consider their responsibility to the public and take the time to consider the facts.

In the absence of a draft permit to review, our family has prioritized issues that should be addressed within the upcoming document:

- **Noise levels:** the proponent will be asking to elevate the noise levels emanating from the pit in excess of the present rural noise levels under the existing bylaw. The Summit Pit will be only 800 m from our house, and we are at a higher elevation. It is improbable that the proponent will be able to contain the noise levels to the max 55 dbL standard that we currently enjoy. We hope that the council will reject any request to increase the permitted ambient noise level. We have lived on this quiet and peaceful property for the past 30 years – Mountain Ash is seeking to impose industrial noise limits on our pre-existing location. We did not buy into an industrial area; they are seeking to disrupt this agricultural district.
- **Traffic Concerns:** The proponent identified the enhancements for Highway 567 that will occur near Range Road 40, these were to include a Class 4 intersection and an extended merge lane for east bound traffic. These enhancements are not going to improve the existing concerns at the intersection of Range Road 35 and Highway 567, which is the only access to Highway 567 for ourselves and our neighbours. We have repeatedly pointed out to Council in previous hearings that because of the sight lines and grades on Hwy 567 approaching Range Road 35 from both directions, increased heavy truck traffic will exacerbate the risk of serious accidents to anyone slowing down or stopping to turn south onto Range Road 35 from Hwy 567. Furthermore, accessing 567 from Range 35 will also become more precarious. Vehicles that are anxious to pass slow moving trucks and pups ascending the steep hill immediately east of the 567/35 intersection often take unnecessary risks as they crest the hill, which threatens a head on collision with anyone entering the east bound lane from Range Road 35. Once summer recreational vehicle traffic and gravel truck traffic combine, our access to 567 will become very dangerous and difficult.
- **Fugitive Dust:** Despite assurances from the proponent that they will take all means necessary to prevent fugitive dust off-site, it seems that they do not have an appreciation for the winds and extended stretches of dry weather that we experience north of Cochrane. We are certain that the gravel pit operators at Hillstone Aggregates and the Lafarge Pit on Glendale Road also take all practical measures to control dust emissions from their pits, yet there is abundant evidence of massive dust emissions from these pits. We have previously sent photographs to Rocky View Council to show dust plumes from these pits that are visible from over 2 km away. It is not hard to find the dust-stains on the highway more than 500 m from these pits. There are no leading edge methods that MALP will employ that these other pits are not already using. They will not be any better at controlling the dust that is tracked out of the pits on vehicles than these pits are currently doing. We might also point out the increased aggregate that is left on Highway 567 and falling off hauling vehicles will only add to the risk of damaged windshields along 567 and the other haul routes.
- **Groundwater quality:** We can only surmise that Council did not have the internal

resources to assess the evidence presented by both the proponent's hydrogeologist and the geo-chemist report sponsored by the Friends of Big Hill Springs Park. However, you have to wonder why it would be so difficult to pick which would be better at filtering or attenuating deleterious substances from accessing the aquifer that supplies our water well and the natural springs at Big Hill Springs Park: one meter of gravel above the groundwater table or 25 plus metres of unsorted aggregate and overburden? The proponent's hydrogeologist also seemed to suggest that all of the overlying materials would disappear abruptly as opposed to the actual weeks or months that it takes any of the other pits to excavate and mine out an area. Thus there actually is exposure of gravel to natural elements that could lead to release of contaminants and turbidity to groundwater. Also, I would tend to put more credibility in a person with a Ph.D. in geo-chemistry for this concern, than an MSc. only in hydrogeology. The eventual creation of a 300 plus acre bowl within a coulee area also seems like bad idea when it comes to protecting the quality of the downstream aquifer.

Aesthetically speaking, we enjoy copious amount of very good quality water, and we believe it is reflected in the quality of produce from our farm. We would be very concerned about the threat to our potable water supply that this project possesses. By the time that groundwater quality issues are detected emanating from the pit, it may well be too late to address the issue.

We were very disappointed in the level of assessment and discernment demonstrated by Council, especially by some of the more vocal members of the six councils that supported the application. Given the concerns voiced by the Big Hill Springs Park administration to defer the decision to allow more time for environmental studies, and the serious issues raised in the Fennell report, the hearing did not seem to demonstrate a coherent and defensible decision making process. We sincerely hope that Alberta Environment and Parks will be more objective and thorough in their assessment of the groundwater risks than Rocky View County was with this application.

- **Valid Term of the Development Permit:** Without having even a draft permit to review, it is difficult to offer constructive comments to the authors of said permit. We do understand however, that the proposed gravel pit cannot proceed until all other licences, permits and approvals are procured from other relevant jurisdictions. Therefore we ask, if the proponent cannot secure all of the required permits within a defined interval, does the development permit become null and void as is the case in some other municipalities?
- **Will the permit be publically accessible before it is presented to Council?** If there are other issues and concerns embedded in the permit, we would prefer to have a chance to respond before the permit is ratified. If the public release of the permit is pending, we are concerned that there may not be sufficient time to review and comment on the permit before it is read to the Council. It would therefore make sense that the ratification be pushed back to allow proper time for a fair review.

Sincerely,

Morley M. Kostecky

To Whom it Concerns,

I understand that there will be a hearing with respect to the MALP Development Permit.

The proponents claim that this will be a “world class” pit is a claim backed by nothing other than “spin”. I have heard no evidence of any previous experience of operating by Mr Waterman. His manager has some formal education in Geology and spotty real experience in pit management.

They have failed to have successfully engaged most neighbouring stakeholders.

They did not study FN use nor engage them.

We do not know the cumulative effects with Hillstone and Glendale pits.

Wildlife study was a joke failing to identify a host of species at risk. Just look at the local paper to see what is there or look at park inventory. Did they use a Finnish guy.

Petition of roughly 10,000 people indicates all levels of government out of touch!

Traffic study and numerous fatal accidents indicate 567 and a yet to be accurately described intersection at RRd 40 is likely to fail.

Hydrology study was made a sham by trying to discredit a very respected geochemist

Council should learn the Municipal Act. Neighbours were all in synch that this pit would negatively impact their use and enjoyment. Nowhere does it say we must compromise with proponents.

Then there was the judicial review. Finding loupe wholes should not be encouraged by democratic governments.

Kindest regards,

Keith Koebisch

Jacqueline

Thanks so much for the confirmation. With COVID and slow or no access to internet Keith was unable to do much more than type on his phone and text and fill in the blanks with calls.

It would be so much more efficient if we could meet as a group to discuss our concerns.

When I look at the landowners map I see much of the watershed basin closest to the park is owned by gravel pit operators, and if you extend that north and west across 567 there are many landowners just waiting to get a gravel pit and cash in. There is little or no regard for the environment, wildlife or adjacent landowners, clearly none for the Big Hill Springs Provincial Park.

The one pit at a time idea might be the best to protect the park and the aquifer but each of these landowners wish to monetize their land as soon as possible and would never agree to wait. 5 different pits, each with a AT approved approach and you will have 250 – 500 gravel trucks rumbling down 567. The carnage for wildlife and others would be a nightmare. Surely society has evolved further.

If this pit is approved then I think that entire area becomes one monstrous scar and for sure no one will be able to guarantee that the cumulative effects will not be devastation.

I am forwarding his email from Keith Koebisch as he is at his lake and has poor internet and email service. He was able to call and text this message. He might be back and will send it himself but he hopes that my submission will suffice.

Thanks

Tom

To whom it concerns,

I own a farm and small business (vet clinic) on Range Rd 40 north of 567. This highway is not of a particularly high standard. The problems include not having a paved shoulder and some areas have no shoulder at all. The intersection is on a correction line in an area where the sight line to the west is not good as it has warranted a double solid line.

The proposed MALP gravel pit will be very problematic and dangerous and to address this concern the applicant says he will put in a class IV intersection, yet we do not know what this will look like and how safety can be achieved. We had commissioned a Traffic Assessment and our Expert pointed out the same concerns we have witnessed over the 30 years we've

owned the land

1. How does an intersection accommodate the correction line?
2. Range Road 40 north is not close to being on grade with the highway. It is far below grade, reducing visibility of the highway in both directions and is often impossible to access the highway in winter, because of ice combined with grade. The only solution is to stay home, or take a chance, break the law and blow the stop sign. Most of us have 4x4 trucks, but even then it is sometimes tough. The clients to our business often don't have the right vehicles and are at extreme risk. The problems are real and not hypothetical.
3. There is a swamp/watercourse/ditches, very deep, and it appears that this what the intersection is built upon. What is the plan to address this?
4. There is a telecommunication hub in the ditch of the intersection. It often gets hit by plows and vehicles. This happens mostly in winter and Telus is often not able to fully restore service until spring. This gives the entire area a big problem. Will this be fully addressed? We have a business landline that we depend on.
5. How do the berms that the pit's spokesman promised neighbours, like Charlene Gale in the NE corner of the intersection, affect sight lines? Is the site, with its double solid line a good place for such an intersection to begin with?
6. We would like to see a complete design plan for this intersection and have a public consultation with stakeholders to iron out something that at this stage is only theoretically possible. Throwing out stuff like Class IV is meaningless. There needs to be acceleration lanes, turn lanes and passing lanes. The problems are many, because the site is pretty rotten and has little going for it under ideal conditions.
7. There is a very large group of spruce trees on the south side of 567. They are on the Lafarge property. They are a local landmark and Mrs. Gale likes them as they afford her protection from dust and noise emitted from the Hillstone Pit. The shade of these trees however prevents the sun from melting ice on the highway. It is a serious problem with no great solutions
8. I would like AT to do an onsite visual inspection of the grades to determine if there are better solutions to keep this intersection safe and to improve RR #40 as the combination of the two make that section very dangerous.

Mr Bruce Waterman the applicant had it right when he, in his letter to the RVC dated 2008, stated that this would be a terrible site for a gravel pit due to traffic concerns and other issues. I enclose Waterman's letter as it shows his concerns are just as relevant then as they are now.

I do not see this as well as other issues being fully address.

Sincerely,

Keith Koebisch

Attention: Kate Beatson

Dear Ms. Beatson

Re: Application # 2008 RV -087, File #07801003

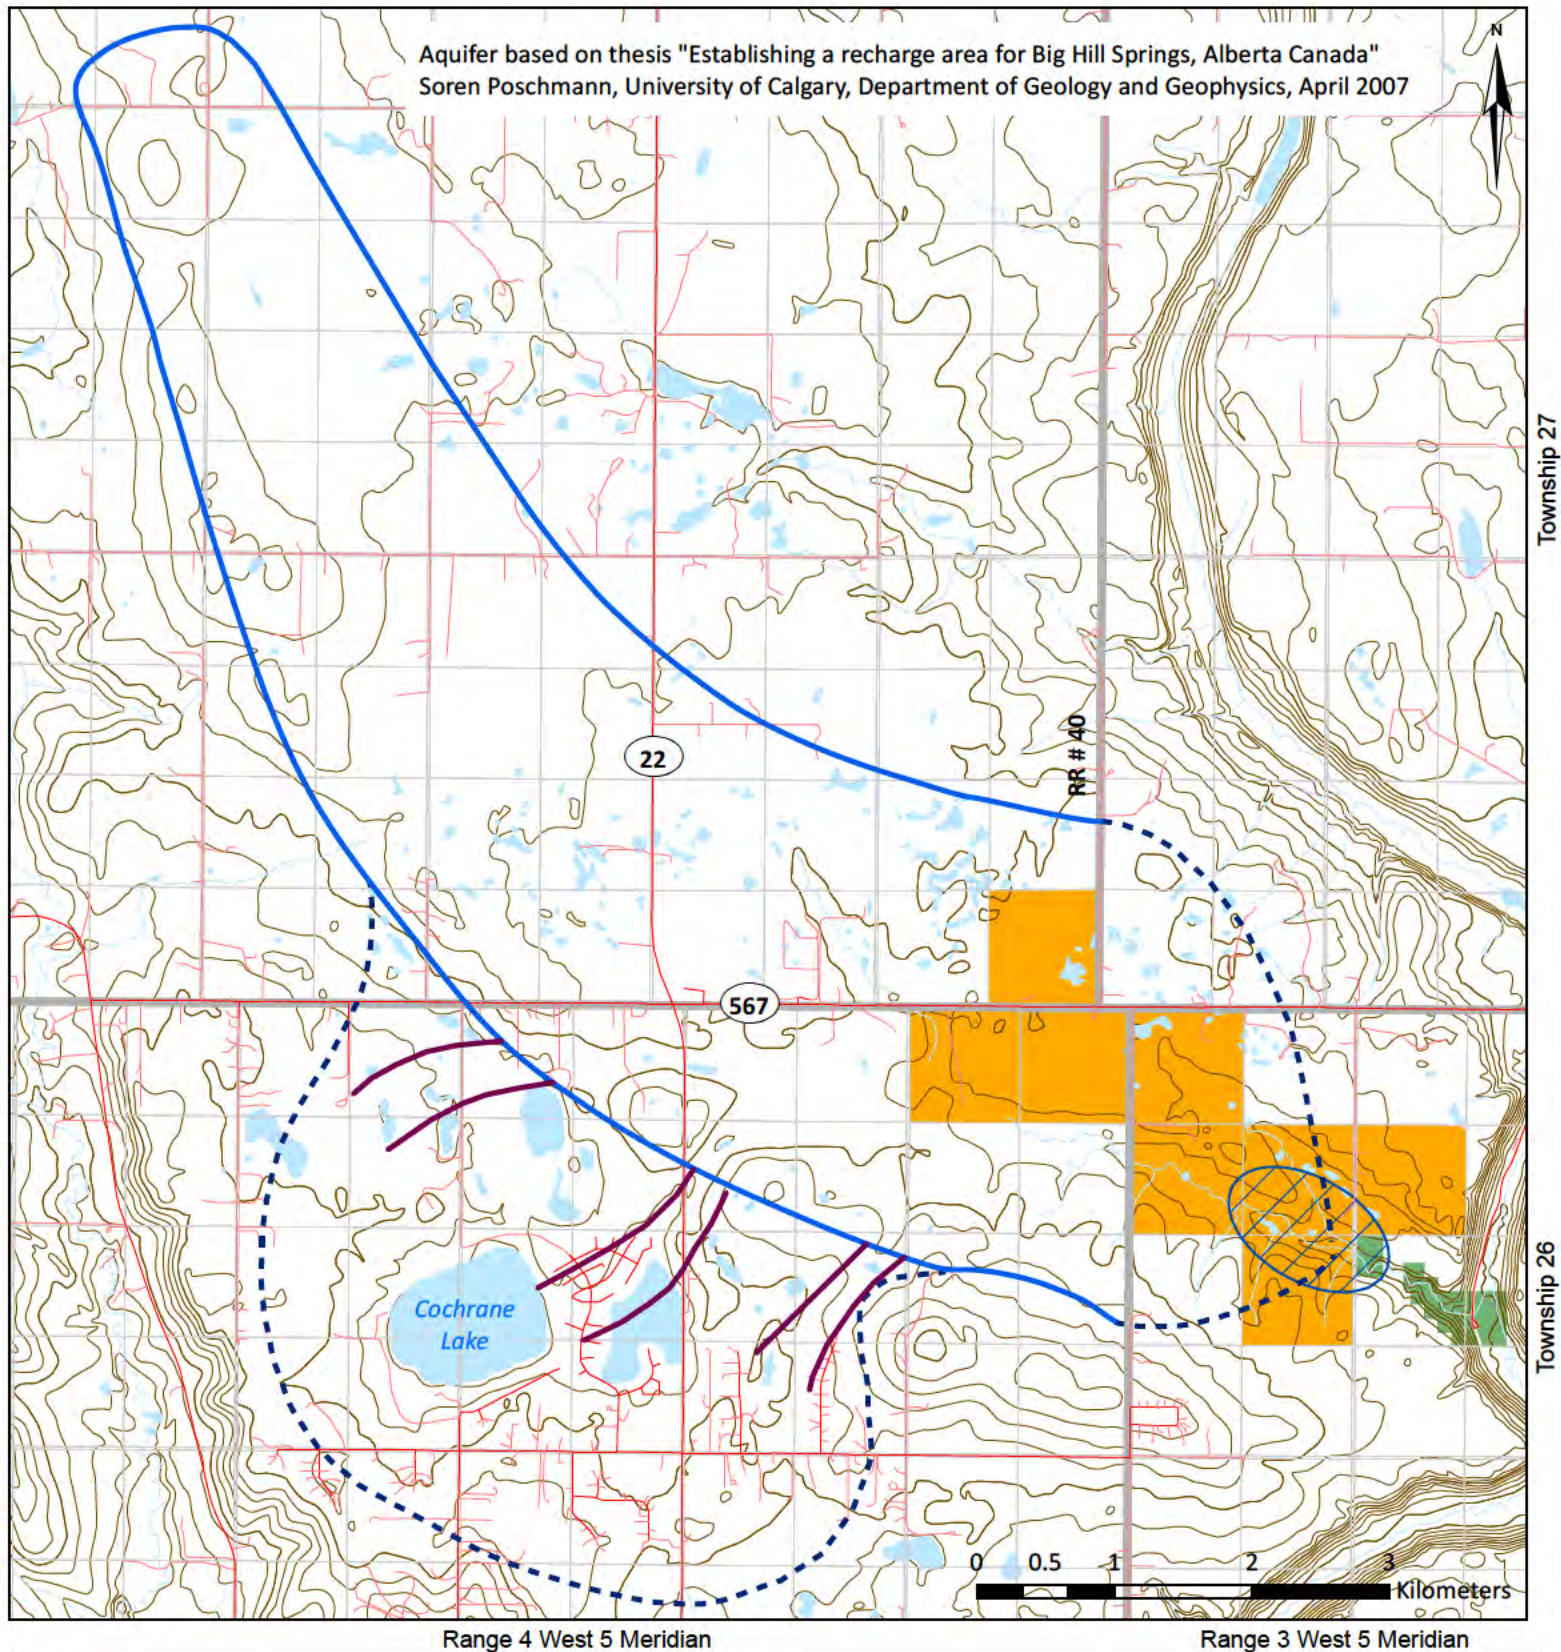

Thank you for your letter dated March 18, 2008 regarding Proposed Land Use Designation for the above mentioned File Number. Our property (File #05731002: Waterman) is in the immediate vicinity of the land requesting the redesignation. We are extremely OPPOSED to the application for the following reasons:

- 1) It is NOT compatible with the other existing uses in the neighbourhood. It is an area almost exclusively designated to agricultural/ranching activities.
- 2) If approved, this would result in INCREASED TRAFFIC on Big Hill Springs Road...especially with big transport vehicles. Inherent with the operation of a gravel pit, there will be CONSTANT vehicle access to Big Hill Springs Road....this increases the risk of accidents and of potentially a more fatal nature.
- 3) If approved, this would DISRUPT the QUIET ENJOYMENT of our property. Not only will there be an increase in noise levels, but also the air quality would be contaminated with higher levels of dust.

If you have any questions/comments regarding our concerns, please do not hesitate to contact me at [REDACTED]

Subject: Bighill Creek Preservation Society (BCPS) Submission to Rocky View County Municipal Site Development Permit for the Mountain Ash Partnership Ltd. (MAPL) Summit Mine.

Bighill Creek Preservation Society (BCPS) Submission to Rocky View County Municipal Site Development Permit for the Mountain Ash Partnership Ltd. (MAPL) Summit Mine.

BCPS is a local watershed group. Our overarching objective is the long-term preservation of the ecological and historical attributes of the Bighill Creek drainage. This includes Big Hill Springs Provincial Park, a much-loved focal point for the public and possibly more importantly, the Park is the source of almost half of the water sustaining the ecology of Bighill Creek. We remain opposed to the MAPL Summit gravel mine.

Rocky View Council, in approving the Summit land use designation chose to ignore the vast preponderance of local opposition as supported by scientific evidence and concerns raised by Alberta Parks and several recognised environmental organisations. This notwithstanding, BCPS submits the following as provisions to be included in the development permit in an effort to reduce the damage the mine will do to the main Big Hill Spring, the Park, downstream ecology and the surrounding community.

BCPS and others who oppose this mine view this development permit approval process as seriously flawed. We are being asked to provide comments on a development permit that has not been circulated to the affected parties. Asking for public input on such an important issue without disclosure would be inappropriate even if there were an appeal process. In this case, Rocky View Council has created a process for gravel mine development permitting that also removes the public's ability to appeal their decisions. As a result, the review process lacks any semblance of procedural fairness or due process.

BCPS's most pervasive concern with the Summit Mine is the risk it creates to groundwater. In Alberta, any "activity" affecting groundwater as defined under the Water Act, requires an application to and approval by Alberta Environment and Parks (AEP) under the Act.

MAPL stated in their evidence that their mine will change the recharge rate of the

aquifer that sustains the Park and Creek. This is a clear recognition that they will create an impact on groundwater- an “activity” under the Act. Nonetheless, MAPL’s position which they have confirmed to BCPS, is that they will not make an application for groundwater impacts. They will not submit themselves to such a review or investigation by AEP.

As Rocky View Council must rely on AEP for oversight regarding the consequences of this mine on groundwater, MAPL’s failure to file for an approval under the Water Act creates a significant gap in the information that Rocky View Council will need to set out acceptable parameters in any subsequent Development Permit.

BCPS’s position is that in order to meet its legislated obligations, Rocky View Council must make an AEP groundwater approval prerequisite to Council’s consideration of the terms of any Development Permit for this mine.

Following are BCP’s more specific recommendations regarding MAPL mine operations and the associated conditions within the Development Permit to avoid or attempt to mitigate harm to groundwater.

BCPS believes that MAPL should be required to:

1. Create and maintain a stakeholder contact list, including Alberta Parks and all participants in this hearing process, as they individually request.
2. Provide the listed stakeholders copies of all operating reports when provided to regulatory agencies or as required by the MSDP approval.
3. Provide stakeholders base line analysis data for groundwater including:
 - introduced chemicals (calcium chloride, chloride, herbicides/pesticides, nitrates, hydrocarbons, metals, etc.),
 - organic compounds and microbiology (organic carbon, total and faecal coliforms, bacteria and viruses).
 - naturally occurring chemicals such as routine salts (hardness, bicarbonate, sulfate, metals, trace minerals and
 - conductivity, temperature, pH, turbidity, and total dissolved solids,
 - flow rates
 - Soil hydraulic conductivities at various depths in and around the gravel pits prior to gravel extraction for reclamation purposes.
4. Construct containment ponds and sumps to withstand a one in fifty-year precipitation event.
5. Provide continuous water table level monitoring in excavations within two meters of the estimated water table level. Provide publicly accessible online reporting of this information.

6. Provide continuous recording and monthly reporting of site precipitation and water table and containment pond levels. Provide publicly accessible online reporting of this information.

7. Immediately advise stakeholders and agencies if any excavation contacts groundwater. In such event, provide to stakeholders and AEP a remediation plan.

8. Create a mitigation plan to rectify exceedance of groundwater contamination baseline.

9. Acquire and maintain insurance or other proof of financial resources adequate to operationalise and complete mitigation plans.

11. Create a program of dye tracing flows from containment ponds to monitoring wells and main spring to understand water movement and hydraulic conductivity changes during the mine operations.

Thank you for considering our submission to this application process.

Subject: [EXTERNAL] - Bylaw C-8051-2020 PL202000031 (06731002/4)

Follow Up Flag: Follow up
Flag Status: Flagged

Do not open links or attachments unless sender and content are known.

We, Cornell and Muriel Wynnobel, 19 Big Hill Creek Estates, Rocky View County, vehemently oppose the above-noted bylaw to redesignate this property from Agricultural to allow for aggregate extraction. We oppose it on two fronts, the damage it will do to both our residential community and to the Big Hill Creek Provincial Park.

Although several of the issues are pertinent to both our residential area and the provincial park we will address them separately beginning with the park.

Of utmost importance is the probability of damage to the source of the spring water which is the reason the park was designated a provincial park in the first place. The aquifer which supplies the park's springs lies directly below the proposed sites for gravel extraction. Over centuries the land which protects the aquifer has developed to filter contaminants and maintain the water temperature which keeps the springs clean, flowing and at a fairly constant temperature. The removal of this protective layer of soil and gravel will destroy the filtration system and thus damage or indeed totally ruin the springs, the life blood of the park. The Paskapoo formation which is the same source as the Bears paw pit provides the water to our area. According to a peer review document submitted by Ailsa Le May, P. Geo on January 19, 2021, the science which the aggregate company submitted, the hydrogeological study put forth with it's proposal was unworthy of credit and reliance. RVC needs to commission a peer review of the hydrogeological study before even considering this application.

This park is a sanctuary for a multitude of types of wildlife, from fish and birds to small and large mammals. It is a source of food, shelter and water for these creatures. It is one of the rare spawning grounds for the endangered Bull Trout. Remove the constant source of water or contaminate it and the park will be rendered useless. The springs feed the Big Hill Creek which ultimately runs into the Bow River.

The county has expressed its opinion that recreation is of significant importance for the residents as evidenced by asking for feedback on what is needed and desired for recreational purposes. Walking trails have shown to be of ultimate importance. This park supplies unique and exquisite walking trails with the benefit of nature, a canopy of shade, fresh water and waterfalls and historic significance.

Covid 19 should have taught us the value of natural spaces to the physical and mental health of people. Why would we ruin an existing source of this type of recreation for more gravel which exists in a multitude of places in Rocky View? How would it enhance a person's physical and mental health to walk the trails to the sounds of heavy industrial equipment and toxic silica dust rather than fresh air and the calming sounds of nature?

The access to the park is from Highway 567. How dangerous will it be trying to enter the highway with a multitude of gravel trucks speeding along the highway. I would be surprised if any one of the residents or councillors has not experienced problems with gravel trucks: speed, lack of courtesy, spreading gravel onto the roads and sending gravel into windshields. The tarps required by law are not adequate to prevent the gravel from escaping and are often nothing but shredded rags covering mere fractions of the load in many cases. The proposing company states about 30 - 50

trucks a day for one pit. What about the cumulative effects of 4 to 6 pits. That equals at least 200 to 300 gravel trucks. How many trips does each gravel truck make a day? Highway 567 is a two-lane highway with no significant shoulders, large, steep hills and hidden intersections, a disaster waiting to happen.

Now, on to the residential community in which we live. The objectionable qualities of this proposal are physical and mental health risks posed by dust, noise, reduced property values, probability of water contamination and just plain worry about contamination or even the loss of water supply or value of property.

Silica dust is known to be carcinogenic and travels well beyond the gravel extraction sites. The most dangerous PM2.5 (2.5 micron) particles can travel over 14 km in a 20 km/hr wind and PM10 (10 micron) particles can travel 3.7 km in the same 20 km/hr. wind. Since the winds are most frequently from the north or the west and very often well above the 20 km/hr. range, both our residential area immediately south of the proposed gravel pit and the park immediately east of the pit would be subjected to this dangerous, toxic dust on a regular basis. As the Town of Cochrane develops further north, even the residents of Sunset Ridge would be exposed to the silica dust. An Alberta Occupational Health and Safety Bulletin states "exposure to crystalline silica can cause a number of health problems including silicosis, lung cancer, chronic obstructive pulmonary disease and emphysema, as well as pulmonary tuberculosis." If you live anywhere in Rocky View, you will have witnessed top soil, snow and even roofing flying through the air on numerous occasions. This risk of illness should be considered of extreme importance in approving the application.

The noise level of the existing aggregate extraction site is already evident in our community and it is considerably farther away than the proposed site. The operation of heavy equipment and constant movement of gravel trucks will be a constant source of annoyance and stress for all residents. This has proven to be harmful to both physical and mental health. Given the location of the sites the sound will travel up to our area. It is even possible to hear concerts in Mitford Park from up here so how much more noise is generated by the gravel extraction process. Because we are significantly above the proposed extraction site no berm will reduce the noise level for our community nor will it block the view into the heavy industrial area, or moonscaped landscape which is presently a scenic and bucolic setting. It will remain an eyesore till long after the present residents have left or died.

The effects on our water supply is of huge concern. As mentioned above, gravel mines would remove the protective filter of the aquifer allowing contaminants to seep into the aquifer. With so much heavy industry and industrial equipment right above our aquifer, there is certainly a reasonable chance of affecting our well. Our only source of water is the common well the residents of Big Hill Creek Estates share. Any contamination or depletion of volume would leave us without the vital source of clean, potable water. This is the most valuable commodity of all to humans and animals.

Our property values will be very negatively affected. We, the residents, and prospective buyers purchase acreages to enjoy the peace and tranquility of rural life including the scenes from our windows and wildlife passing through. With heavy industry looming within our sight lines and the noise and dust, who would be motivated to buy in this location?

The cumulative effect of the proposed wells including the already functioning well needs to be taken into consideration in all aspects mentioned above: water contamination, dust, noise, traffic, etc. Each well individually has an impact, but taken together they pose a huge risk to the ability to enjoy our homes and lives.

The company claims to have taken residents' concerns into consideration, but we have not seen, nor heard a word from them.

The traffic Impact assessment submitted with the proposal did not take into account the steep grades, the narrow road, the varied users, including school buses, on Highway 567.

We believe that approval of this proposal would be a failure of the Council to carry out its responsibility to Rocky View voters and residents. A full Area Structure Plan needs to be completed before any proposals of this nature are even

considered. Such a plan must take into its analysis data, reports and scrutiny from independent experts not supported by applicants with vested interests. To not utilize independent sources would be negligent on council's part.

The pros and cons: Many significant cons have been listed above. The pros seem to be few and only benefit B & A Planning Group as there are already plenty of other gravel sources.

Do you as a council wish your legacy to be the destruction of a natural jewel, the Big Hill Springs Park and the waters it contains or the death or injury of a schoolbus load of children. When a gravel truck collides with a school bus, it will be death.

Please take these concerns carefully into consideration when you make a decision on the proposed gravel extraction operations.

Respectfully,

Cornell and Muriel Wynnobel

Subject: [EXTERNAL] - MALP Summit Gravel Pit DEVELOPMENT PERMIT
Date: June 2, 2021 7:26:35 PM

Do not open links or attachments unless sender and content are known.

Jacqueline,

The development permit for MALP Summit Gravel Pit should be denied. I live less than 800 meters from the proposed pit and will be negatively affected by dust, noise, traffic and property value.

Summit hydrologist out of Edmonton sat in my kitchen and told there was **NO guarantee the gravel pit will not effect my water well**. He was NOT one of the SRL hydrologists at the public hearing, they found somebody else that would say what they wanted to hear. They have offered to monitor my well but it would be court battle to regain something I already have.

Four geologists and hydrogeologists have sent in video presentations saying this should pit should NOT happen in opposition to the biased opinion of one company. Our opposition opinions were based on facts, science and previous studies. SRL is based on wishful thinking that nothing bad will happen.

I remain opposed to the Summit pit; however, given that Council chose to ignore the valid concerns raised at the public hearing, we are submitting the following as provisions to be included in the development permit to minimize the damage the pit will do to the environment, the Park, and the surrounding community. I also want to raise concerns with the seriously flawed development permit approval process. I am being asked to provide comments on a development permit that has not been circulated to the affected landowners. How can I possibly know whether the terms being proposed are appropriate? Asking for public input on such an important issue in a vacuum would be inappropriate if there were an appeal process. Given that Council has set up its process for gravel pit development permit approvals to remove the public's ability to appeal their decisions, the process lacks any semblance of due process.

As part of the development permit, as a minimum they should be required:

1. Traffic assessment redone on the dangerous intersections at RR40 north and RR35 south.
2. Create and maintain a stakeholder contact list.
3. As requested by any stakeholder, provide copies of all operating reports when provided to regulatory agencies or as required by the MSDP approval.
4. Provide stakeholders base line analysis data for groundwater; including introduced chemicals (calcium chloride, herbicides, hydrocarbons etc.), naturally occurring chemicals,

trace minerals and turbidity. (Main spring baseline as well?)

5. Construct containment ponds and sumps to accommodate one in fifty year moisture events.
6. Provide continuous water table level monitoring in excavations within two meters of the estimated water table level.
7. Provide continuous recording and monthly reporting of site precipitation and water table and containment pond levels. Gauge (estimate?) groundwater recharge rates.
8. Immediately advise stakeholders and agencies if any excavations contact groundwater. Provide to stakeholders and AEP a remediation plan. (Immediately reclaim effected zone?)
9. Create maximum allowable groundwater recharge rate. (Requires flow rate monitoring at Main Spring?)
10. Create mitigation plan to rectify exceedance of groundwater contamination baseline or recharge rate is exceeded. Estimate the costs of mitigation.
11. Acquire and maintain insurance or other financial resources adequate to operationalise and complete mitigation plan.
12. Create a program of dye tracing flows from containment ponds to monitoring wells and main spring.

Hi Sarah,

Thank-you for your submission. I will include this as part of the agenda package for this application to Council.

However, the Application number is referring to the past Master Site Development Plan for this site (PL20200030). I believe you are submitting this opposition for the Development Permit (PRDP20211744), as the details portion references to begin mining operations onsite. Can you please confirm?

Any questions, please let me know.

Thanks,
Jacqueline

Rocky View County, AB T4A 0X2

Subject: Application Number: PL202000031
APPLICATION DETAILS: Mountain Ash permit to begin mining

After reviewing the application for the proposed gravel pit that will be located across the highway from our property, we would like to submit our formal OPPOSITION to a permit being issued for Mountain Ash to begin mining. The reasons are many, including quality of life, the surrounding park being affected negatively and the increased traffic and safety concerns AND an existing gravel pit that already provides that resource.

Please rethink this decision.

Kind regards,
Sarah Krokis

Dear Madams and Sirs:

I am writing to you as a landowner in Rocky View County. I wish to register my extreme opposition to Council's approval of the Mountain Ash gravel pit development. Council's approval was in defiance of the Alberta Park's recommendation for further study AND was, to the best of my knowledge, granted without consultation with the appropriate First Nations stakeholders.

That this development would occur in such close proximity to such sensitive ecologies without due consideration for the impacts on hydrology, and plant and animal life, not to mention the impact on hundreds of thousands of persons who visit this incredible Provincial Park annually, is highly irresponsible.

I look forward to hearing from you,

Joan Hillson

Re: Gravel extraction development plan (permit #PRDP20211744)

To whom it may concern,

I write today to express my opposition to the development of the Mountain Ash gravel pit, to be constructed less than 3 kilometres from Big Hill Springs Provincial Park.

The details of this planned development are short-sighted at best and ignorantly destructive at worse, as the developers have not only failed in their duty to consult with local Indigenous groups about this significant cultural and natural area, but are also blatantly ignoring the 80% of county residents who oppose this development. Considering this project will not provide a new or limited resource, nor will it create significant revenue for the local economy, it is exceptionally foolish to approve the development of this redundant and damaging gravel pit.

As a former vegetation manager with Alberta Parks, I worked in Big Hill Springs Park for several seasons and witnessed its value as an ecological refuge and cultural resource for Alberta citizens. Now, as a PhD student conducting research in Alberta's threatened natural areas, I am highly concerned for the long-lasting damage this project could have on the park and surrounding area. The proposed development site sits at the confluence of Alberta's Foothills, Grassland, and Parkland Natural regions, which have a combined protected area of less than 4%. The Parkland region in particular has less than 1% protection in the province of Alberta, and destructive developments near Big Hill Springs will threaten what little remains of this unique ecosystem.

Big Hill Springs Provincial Park and surrounding area hosts over 175 species of local and migratory birds, which rely on this small pocket of protected land in an otherwise overdeveloped agricultural landscape. Species sighted in this park include the Prairie Falcon and Sprague's Pipit, which are species of Special Concern in the province. To introduce further development nearby, including water and air pollution, will have long-term negative impacts on the quality of habitat for many rare and sensitive species.

For the reasons stated above—and many others addressed by the Save Big Hill Springs team—I urge you to reconsider this decision, to listen to the concerns of over 7,000 signatories of the petition dedicated to this cause, and to cancel this short-sighted project. Please, consider these very real consequences of development, and instead make the choice to preserve this cultural and natural resource for generations to come.

Regards,

Jenna LeBlanc

RE: Permit application number: PRDP20211744

Hello, I am Charlene Gale, Gale Force Ranch. I live on SW ¼ Section 6, Twp 27, Range 3 West of the Fifth Meridian which is directly north of the proposed Aggregate Mine on W ½ Section 31, Twp 26, Range 3, West of the Fifth Meridian.

I opposed the redesignation of W ½ 31-26-03-W05M from Agriculture, General District to Direct Control District to facilitate an aggregate operation at the March 2, 2021 Council meeting. I oppose allowing a permit for this pit to continue. I do not feel that my concerns with this development, and those of others in the community have been addressed or even taken seriously.

My Father and Grandfather bought this quarter in the 1960's, my husband and I moved here in 1984, and the land was transferred into my name a few years ago.

In general, I believe a landowner has the right to use his or her land however they choose, as long as the impact on the neighboring community and the environment is not overly detrimental.

I understand the need for gravel and the mining of gravel. However, I believe that that mining should be done in accordance with Rocky View County's noise, pollution and environmental bylaws and the Federal and Provincial laws.

The Hillstone gravel pit is ½ mile (800 meters) away from my house. In spite of the large trees around my yard and the big berms around the pit, the dust has become more than a minor nuisance, coating our property in a brown film and probably doing much the same to our lungs and those of our livestock.

The gravel trucks passing our house is now almost constant, 12 hours a day, 5-6 days a week. Some of those trucks have either been "enhanced" to make them louder, or the drivers do not

know when to shift gears! A few are so consistently loud we can identify them from inside our house with the windows and doors closed. I was on our ride on lawn mower mowing grass last week and could hear and identify one of the worst offenders going by – over the sound of the mower!

During the hot spell this past week, we have tried to open our windows early in the morning then close them up to keep the heat out. The cool air is unfortunately filled with exhaust fumes from the equipment being started down at Hillstone in anticipation of the loaded trucks starting to haul at 7 am!

I can only assume that the problems we have with Hillstone being so close will be much worse when the gravel pit is across the road from us. The noise and dust from the traffic in and out of the Mountain Ash Summit Pit will be a huge impact on our lives.

Since Highway 567 is a Correction Line, the entry to the proposed pit, at Range Road 40 on the South side of 567 is only offset from Range Road 40 on the north side of 567 by about 600 feet (180 meters), meaning there will be two intersections very close together. This will make entering or leaving Highway 567 even more difficult and dangerous than it is now.

Currently the Volker Stevin company are building a Type IIIA intersection on the south of 567 part of Range Road 40. Today they are cutting the pavement, definitely a noisy, dusty process. The paint and flags for this intersection come within a few meters of the north of 567 part of Range Road 40. I was told that the sightlines are sufficient that it will be safe. Were the sightlines calculated with traffic in the intersection? With gravel trucks and Volker Stevin equipment pulling on or off the highway or travelling through the intersection it will be nearly impossible to see when it is safe to pull out of our road. When this intersection is upgraded to the Type IV intersection that Mountain Ash's Summit Pit proposal said was required, won't that make the intersections even less safe?

While on the topic of the Volker Stevin yard, the required work on Range Road 40 south of the 567 and the upgraded intersection on 567 and Range Road 40 – which is only a few feet from my yard – why was I not notified of this development? Or for that matter this proposal of granting a permit to begin work on the MALP site?

Big Hill Springs Provincial Park is really an Alberta jewel and the impact of having such a large aggregate extraction mine so close to the headwaters of the creek is alarming. The beauty and the presence of historic and prehistoric artifacts in the Park needs to be protected so future generations can also enjoy them. The water flowing through the Park continues on and enters the Bow River, travelling through Cochrane Rancho park and the town of Cochrane. It is enjoyed by many more than the 250,000 visitors to the actual park every year.

How will the silt and runoff from the pit be controlled, even in heavy rain and wet years so as to not affect the Spring and creek? Or neighbouring wells?

The March proposal says the mine will not go any closer than 800 meters (1/2 mile) from the Park. Hillstone Aggregate is 800 meters (1/2 mile) from my house and we feel the effects of that pit, how do they think the Park will not be affected at the same distance? The headwaters of the creek are not on the Park site and so are vulnerable to developments such as this gravel pit.

This area is part of the Traditional Territory of Treaty 7. There is a buffalo jump along the west bank of the coulee. Given the beauty and fresh water supply in the Big Hill Springs Park valley, it is easy to think that the people would have camped in the valley while they processed the buffalo collected from the jump. Given this long term history with the site, were the Indigenous people asked to be involved with the redesignation of this site?

Although I realize that we do need gravel and the income from such industries benefits Rocky View County and the residents of the County, it does sadden me to see so much agricultural land being redesignated and opening it up for development other than agricultural use. Not only is agriculture an essential service for everyone, but agricultural areas also allow indigenous wildlife to share the area and continue to be a part of this County. I understand that the Bull Trout in the Big Hill Springs Creek are a protected species. The Grizzly bears that have been seen in the area, the wildcats, the smaller foxes and coyotes, the hawks, song birds, rabbits, ... What will happen to them? Pastureland supports the grasses and herbs that have been growing here for centuries. I read recently that there is a study now being conducted to measure the amount of atmospheric carbon grasslands remove and sequester. The reclamation of the site will not restore the contours of the land or the plants and wildlife that are there now.

In conclusion, I do not support proposed Permit number PRDP202111744 allowing development to begin on the gravel extraction pit on the West ½ of Section 31, Township 26, Range 3, West of the 5th Meridian. In the future, when the Hillstone Aggregate pit is finished and has been reclaimed, I might be willing to support a new pit in this area if they are able to do so without endangering the water table or the Big Hill Springs Park and its headwaters.

Respectfully yours,

Charlene Gale,

Re: Development Permit – PRDP-20211744

Dear Ms. Targett;

Writing this letter on Canada Day, considering all the recent happenings, is very poignant for me. To reflect on what it means to be Canadian.

The purpose of this letter is to accompany my video submission regarding the above noted Development Permit. Five minutes is not nearly enough time to convey all the reasons that my family and community are **asking that Rocky View Council DELAY the decision on the Development Permit until further consultation can take place.**

BACK STORY

As a RVC resident of 20 years, I have followed the advances of the aggregate industry closely for 7+ years. Many of my friends, neighbours and close community groups have far more than 20 years of advocacy, engagement, and consultation in the responsible and sustainable development of the aggregate industry in our County and community.

I, as well as, copious other RVC residents have attended consultations (feedback on the aggregate extraction plan), open houses (by aggregate companies) and Public Hearings (back in 2014 for myself and as far back as 2007 for others). Deemed as unreasonable to deal with by the Gravel Pit operators, residents, have time and time again, simply taken a firm stand on what they value – RESPONSIBLE AND SUSTAINABLE development of natural resources. The aggregate industry insists that is a low impact and highly regulated activity, neither of which is the case. First low impact does not mean no risk and the industry continue to be reluctant to do a comprehensive risk assessment of

their activities as it pertains to specific sites. Nor do they back those claims of low risk with any assurances other than words. Secondly, they are NOT regulated to the same level as those that they like to compare themselves too, when convenient to do so, the Energy industry.

BYLAWS and OTHER POLICIES

Many residents attended a consultation for an Aggregate Resource Plan, nearly 10 years ago now, with the intent of providing feedback on the ethical development of this natural resource as taxpayers, residents and constituents. Years later, the residents are still raising the same concerns that were raised from the start. There have been calls for the development of an Area Structure Plan as an overlay policy to increase the level of due diligence required in ecologically and historically sensitive areas. However, still the only venue that remains open to address these concerns are Public Hearings. The same concerns are dug up with each application which is not what residents desire nor does it represent good governance. There simply should be no mining in areas that are ecologically sensitive as echoed by what is taking place in the Coal industry. Not all proposed sites are created equal. Both residents and Park users want a buffer zone around the Park which would be reflected in land use that complements and supports the integrity of the Provincial Park. As indicated by a petition, of nearly 10,000 signatures at the time of writing this letter, citizens want to protect the unique ecosystem including the tufas, the Spring, and the aquifer that supplies the entire system with high quality ground water. The aquifer is also extremely important for drinking water for local residents. Alberta Environment and Parks are very aware of the challenges surrounding water quality as they regulate several small water systems in the area. There are plenty of research papers that indicate that gravel pits can have impacts on the recharge and chemistry of the groundwater.

For example, Ground water Hydrology, Ground water resources, [\(link to paper maumee~2.qxd \(in.gov\), pg 166\)](#) is a massive research paper on multiple aquifers in Indiana including composition, chemistry, etc.

"The susceptibility of bedrock aquifer system to surface contamination is dependant on the nature of the overlying sediment, because the bedrock thought out the basin is overlain by unconsolidated deposits. Just as recharge for bedrock aquifers can not exceed that of the overlying unconsolidated deposit, susceptibility to surface contamination will not exceed that of overlying deposits. However because the bedrock aquifer system have complex fracturing systems, once a contaminant had been introduced into a basin bedrock aquifer system, it will be difficult to track."

Even if you do not understand the data or the science of the paper, it makes very clear inferences that the overlaying sediment (or lack thereof) makes a basin vulnerable to contamination. And it is not unreasonable or illogical as a citizen scientist to conclude:

1. The type of overlying sediment is important. Overlying sediment has an impact on recharge. Complex fracturing systems of bedrock makes tracking contamination difficult/impossible. Monitoring for contamination is not a proactive migration strategy.
2. Therefore, a remediation for soil and ground water for contamination to the aquifer needs to be included in the DP.
- 3) MALP needs to explain the science better to the layperson and those that they wish to develop a reasonable working relationship rather than making statements, such as "water does not flow uphill". They clearly do not take their role to educate the public at all seriously. Their only interest is to defend their own findings in this process.

PUBLIC HEARING

As I have attended Public Hearings before, the COVID video conference style of this process DID NOT replicate the same process as an in-person hearing. There was no opportunity for rebuttal by the opponents as would occur at an in-person hearing. There was no opportunity for anyone but the proponent to reply to initial evidence or questions raised by video submission. The proponent had the last word on video presenters and that is not how the process has ever worked in the past. There were also barriers to inclusion for those that are not technically savvy or have unstable internet connections which was a problem that plagued, presumably, the majority of residents whether it be lag in connection, freezing of video streaming or loss of connection all together. This issue is well documented by people working from home and online learning of students over the past year.

CONTRARY EVIDENCE

Although, a thorough discussion is intended as part of the Hearing process, the absence of rebuttal allowed for discrediting of those presenting contrary data or information without refutation which favoured the presentation of the proponent. No counter evidence or additional supporting documentation could be given by the opponents to further substantiate or validate their evidence. As stated, this is an issue because it is not the role of Rocky View County to hire independent third parties to validate industries reports. All the experts, community interest groups and citizens are required to research and present impacts that are not considered by the proponent, to which they take great pleasure in trying to discredit rather than supply empirical support to counter the actual impacts raised. In fact, most of their responses simply revolve around denial of existence of the specific impact raised as "the industry experts". This represents a gross misuse of the power dynamic in the process.

SPECIES AT RISK

This is no more clearly illustrated where species at risk are concerned. Mountain Ash made no mention of any wildlife, never mind species at risk. There needs to be more consultation on species at risk with independent third-party experts in that area as Mountain Ash cannot seem to find any of them. Residents know for a fact, that there are grizzly bears that are starting to move east along Highway 567. And what about downstream impacts to fish habitat? This was not addressed but simply excluded by stating that there are no animal impacts. No evidence or rebuttal took place during the video Public Hearing. There was no mention of with whom Mountain Ash specifically consulted to come to that conclusion. Again, if there was proper rebuttal during the Hearing process, someone would have asked for clarification on items glossed over both in writing and during their presentation.

AQUIFER IMPACTS FOR SMALL WATER SYSTEMS

Drinking water IS highly regulated in Alberta. My neighbors and myself have sat in many audit reviews with AEP where many a Compliance Officer has shared various report data on things like how flushing your toilet releases fine particles of fecal matter that can land on your toothbrush! Clearly, there is NO level of risk that is acceptable by AEP standards. Our water system is regulated by AEP. We are expected to maintain the highest of standards for drinking water for our private community water system, yet Mountain Ash has the freedom to self identify as low risk without a likewise comprehensive risk assessment, an assessment that includes ALL POSSIBLE risks identified as we have been required.

To that end, there has not been enough consideration for the barriers to effective advocacy for our community water well and small water system. With limited resources and zero funding (we are not eligible for grants or any special funding to advance our system beyond regulatory requirements, operation and maintenance). Our community of volunteer operators has been expected to become aquifer experts in a matter of months while continually being dismissed as experts even as stewards of our own system since 1979. We do not, however, have the expertise to negotiate a fair contractual deal with Mountain Ash due to the imbalance of power that exists. Our volunteer Executive team did try to advocate as best as they could but we are out resourced and under funded.

Now that Mountain Ash has hired a high powered lobbyist, we are certain that they are no longer interested in consultation with our community. From the beginning, they had no plans of consulting with our community which is where our advocacy began. And it was clear during the Hearing that they had no plans of engaging us until the Development stage, as we found out during the Hearing (see text exchange between President and myself on the day of the Hearing). Mr. Waterman, indicated, in an email sent to yourself that he felt we were not contracting in 'good faith' because we shared the agreed mitigations discussed between Mountain Ash and Big Hill Creek Community Association with Rocky View County to be included as part of the Development process. In addition, Mr Waterman, provided the President of our Association with a 160+ page water monitoring report and then advised him not to share it with anyone? At this point the only expert that we have ever had access to is, Alberta Parks and Environment, who regulates our water system. We have advised them of the situation that we are in and have ask for further assistance. We have not yet had a response to our inquiry. What we really needed to negotiate in the best interests of our community and water was for Mountain Ash to pay for fees for both a lawyer and a water expert to assess our situation independent of their reports. However, they were reluctant to agree to test our water as they continued to insist that their site wells would be impacted first. Monitoring is not the type of mitigation that we are interested in, given that, we are held to such a high standard for our own water system. And there is plenty of research that does not support this zero-impact promise. For example, "Regional characterization of the Paskapoo bedrock aquifer system, southern Alberta", *Canadian Journal of Earth Sciences* 2009 which indicates that *"For the vast majority of wells that have water levels below surface, we noted a clear 1:1 relationship between static water level elevation and ground surface elevation across the study area (Fig. 18), indicating that the regional piezometric surface mimics surface topography. These regional trends employ that recharge to the Paskapoo potentially occurs over a majority of the aquifer area. Indeed, early work notes general downward-directed flow across much of the Paskapoo (Farvolden 1961; Meyboom 1961) in both high-land and low-land areas. Results also support pervious work that indicates bench lands as well as valley bottoms may be important recharge zones across the Paskapoo."* Pg11

We require additional time to allow Alberta Parks and Environment to review the Water Monitoring document and to advise us who will be held accountable should our water quality or quantity be impacted by the gravel pit developments. MORE CONSULTATION IS REQUIRED.

AGGREGATE ALLIANCE

It seems unfathomable that Rocky View County would agree that allowing multiple competitors within an industry to form a coalition to monitor the cumulative impacts of each other would be a reasonable form of mitigating the cumulative and compounding impacts. As the impacts are compounding by nature, how are they going to collectively reduce compounding problems of noise,

(picture and video - sent separate as due to file size - of existing pit 2 miles east) dust, traffic, etc., etc. And these are only the monitoring impacts, there is nothing to address proactive strategies beyond monitoring which is essentially just waiting to report on something bad that has already happened. What about cumulative impacts that have not been addressed like aquifer recharge that accounts for all of the land disturbance, not on a singular basis but when the next pit comes online and then the next. Not to mention the chemical impacts, how are those going to be addressed as a development as a whole – the sum of the parts.

CONSULTATION WITH FIRST NATIONS

In the interest of broader consultation and considering the proximity to Big Hill Springs Provincial Park it is incomprehensible that there was no mention of consultation with First Nations. Previous gravel pit applications have been denied based on significant archaeological findings in the areas surrounding the Park. As such, there would be a higher duty to consult based on the knowledge of the traditional use of the land in and around the Park.

CONFLICT OF INTEREST

Finally, the aggregate industry like to label residents that are opposed to gravel pit development in areas that are deemed ecologically sensitive as NIMBYs. Sadly, the most obvious case of NIMBY seems to be that of the actions of Councillor Kim McIylor who voted to allow a gravel pit development adjacent to one Provincial Park while holding a position on the Board of a Foundation for another Provincial Park. This seems to be NIMBYism at it's finest and a conflict of interest in the eyes of the general public. This has undoubtedly had an impact which has not been in the best interest of the process from the very beginning.

These are just some of my thoughts that I wish to be included on the record as part of this process.

Thank you,
Leah Pearce

Re: Development Permit – PRDP-20211744

Dear Ms. Targett;

Writing this letter on Canada Day, considering all the recent happenings, is very poignant for me. To reflect on what it means to be Canadian.

The purpose of this letter is to accompany my video submission regarding the above noted Development Permit. Five minutes is not nearly enough time to convey all the reasons that my family and community are **asking that Rocky View Council DELAY the decision on the Development Permit until further consultation can take place.**

BACK STORY

As a RVC resident of 20 years, I have followed the advances of the aggregate industry closely for 7+ years. Many of my friends, neighbours and close community groups have far more than 20 years of advocacy, engagement, and consultation in the responsible and sustainable development of the aggregate industry in our County and community.

I, as well as, copious other RVC residents have attended consultations (feedback on the aggregate extraction plan), open houses (by aggregate companies) and Public Hearings (back in 2014 for myself and as far back as 2007 for others). Deemed as unreasonable to deal with by the Gravel Pit operators, residents, have time and time again, simply taken a firm stand on what they value – RESPONSIBLE AND SUSTAINABLE development of natural resources. The aggregate industry insists that is a low impact and highly regulated activity, neither of which is the case. First low impact does not mean no risk and the industry continue to be reluctant to do a comprehensive risk assessment of their activities as it pertains to specific sites. Nor do they back those claims of low risk with any assurances other than words. Secondly, they are NOT regulated to the same level as those that they like to compare themselves too, when convenient to do so, the Energy industry.

BYLAWS and OTHER POLICIES

Many residents attended a consultation for an Aggregate Resource Plan, nearly 10 years ago now, with the intent of providing feedback on the ethical development of this natural resource as taxpayers, residents and constituents. Years later, the residents are still raising the same concerns that were raised from the start. There have been calls for the development of an Area Structure Plan as an overlay policy to increase the level of due diligence required in ecologically and historically sensitive areas. However, still the only venue that remains open to address these concerns are Public Hearings. The same concerns are dug up with each application which is not what residents desire nor does it represent good governance. There simply should be no mining in areas that are ecologically sensitive as echoed by what is taking place in the Coal industry. Not all proposed sites are created equal. Both residents and Park users want a buffer zone around the Park which would

nated water. However, the presence of fractures can locally decrease the effectiveness of a till to protect ground water. The differences in basic hydrologic properties of sands and clays make it possible to use surficial geology to estimate the potential for ground-water contamination.

The highly complex relationships of the various glacial deposits in the Maumee River basin preclude site-specific comments about susceptibility of the regional aquifer systems to contamination. However, a few gross generalizations can be made. Detailed mapping, including mapping for ground-water sensitivity to contamination, is available for Allen County (Fleming, 1994).

The Kendallville Aquifer system, consisting chiefly of intertill lenses of outwash sand and gravel, has low to moderate susceptibility to surface contamination. Clay-rich Erie Lobe tills, commonly ranging from about 10 to 100 feet in thickness, overlie much of the aquifer system and offer some protection to the underlying aquifers. However, in northeastern DeKalb County and many parts of Steuben County, Erie Lobe tills are absent and more permeable sediments in the form of ice-contact and mixed-drift deposits occur at the surface. Thus, the northern extent of the Kendallville Aquifer system has a significantly higher susceptibility to surface contamination than other parts of the system.

Along its northern extent, the Aboite Aquifer system is moderately susceptible to surface contamination. The aquifer system, comprised of outwash sand and gravel deposits that occur at various horizons, is overlain by clay-rich Erie Lobe tills in the north. In the south, however, the system is highly susceptible to surface contamination because there is little if any till present, and the thick outwash channel and fan deposits that comprise the water-bearing units in this area are poorly confined by heterogenous surficial sediments.

In general, the Hessen Cassel Aquifer system has low susceptibility to surface contamination. Across large parts of the southern Maumee River basin, the seldom-used scattered intertill lenses of glacial outwash that comprise the aquifer system are overlain by about 20 to 40 feet of clayey basal Erie Lobe tills. The till cap contains a well-developed system of near-vertical fractures that extend to a depth of 20 to 25 feet (Fleming, 1994). However, the shallow fracture zone of the Erie Lobe tills does not significantly reduce the high degree of confinement of the aquifer system

because the few wells that reach productive zones of sand and gravel have depths ranging from 50 to 90 feet. In the northeastern part of the aquifer system, *glaciolacustrine* sediments of the Maumee Lacustrine Plain appear as a surficial veneer of laminated silt and clay, tills, debris flow deposits and interlayered sand and silt. In some areas of the lacustrine plain where surficial deposits are thin, the underlying sand and gravel aquifers are susceptible to surface contamination.

The New Haven Aquifer system has low to moderate susceptibility to surface contamination. The northern part of the nearly-continuous outwash plain deposit is moderately susceptible because it is overlain by an extensive blanket of fine sand. The remainder of the aquifer system, overlain by tills, debris flow deposits, and glaciolacustrine sediments, has low susceptibility to surface contamination.

The unconfined portions of the Cedarville and the Eel River-Cedar Creek Aquifer systems are highly susceptible to contamination from surface sources because the surficial valley train sediments of both aquifer systems are highly permeable. Although tills beneath the surficial valley train deposits may provide some protection to the confined portions of both aquifer systems, in many places surficial valley train deposits coalesce with the deeper outwash deposits. Hence, the overall susceptibility of the Cedarville and the Eel River-Cedar Creek Aquifer systems is considered high.

The Teays Valley and Tributary Aquifer system has a low susceptibility to surface contamination because outwash sediments within the bedrock valleys are generally overlain by dense tills of the Trafalgar Formation and clayey tills of the Lagro Formation. Although lenses of outwash sand and gravel may occur within the tills, the predominance of fine-grained sediments above the bedrock valleys limits the migration of contaminants from surface sources to the deep aquifers.

The susceptibility of bedrock aquifer systems to surface contamination is dependant on the nature of the overlying sediments, because the bedrock throughout the basin is overlain by unconsolidated deposits. Just as recharge for bedrock aquifers cannot exceed that of overlying unconsolidated deposits, susceptibility to surface contamination will not exceed that of overlying deposits. However, because the bedrock aquifer systems have complex fracturing systems, once a contaminant has been introduced into a

basin bedrock aquifer system, it will be difficult to track.

Regional estimates of aquifer susceptibility can differ considerably from local reality. Variations within geologic environments can cause variation in susceptibility to surface contamination. Also, man-made structures such as poorly-constructed water wells, unplugged or improperly-abandoned wells, and open excavations, can provide contaminant pathways which bypass the naturally-protective clays. In contrast, man-made structures can also provide ground-water protection that would not normally be furnished by the natural environment. For example, large containment structures can inhibit infiltration of both surface water and contaminants. Current regulations administered by the IDEM contain provisions for containment structures, thereby permitting many operations to occur that would otherwise provide an increased contamination risk to soils and the ground water. Other regulations administered by the IDNR regulate the proper construction of new wells and sealing (plugging) of abandoned wells, whether related to petroleum or water production.

Protection and management of ground-water resources

Major ground-water management and protection activities in Indiana are administered by the IDEM, IDNR, and the Indiana State Department of Health (ISDH). An expanded cooperative effort in the form of the Inter-Agency Ground-Water Task Force involves representatives of these three agencies as well as the State Chemist, State Fire Marshal, and

members of local government, labor, and the business, environmental and agricultural communities. The Task Force was first formed in 1986 to develop a state ground-water quality protection and management strategy, and is mandated by the 1989 Ground Water Protection Act (IC 13-18-17, previously 13-7-26) to coordinate the implementation of this strategy. The strategy is an agenda of state action to prevent, detect, and correct contamination and depletion of ground water in Indiana (Indiana Department of Environmental Management, 1988c). The 1989 act also requires the IDEM to maintain a registry of contamination sties, operate a clearinghouse for complaints and reports of ground-water pollution, and investigate incidents of contamination that affect private supply wells.

Developing a program plan for delineating and managing wellhead protection (WHP) areas for public water supplies is one priority action designated by the state ground-water strategy and draft implementation plan (Indiana Department of Environmental Management, 1988b). The federal Safe Drinking Water Act Amendments of 1986 established the program for protection of wellhead areas for public supply systems from contamination, but requires a state to complete a program plan in order to be eligible for federal financial assistance. The Indiana WHP program plan has been developed and is expected to become effective in 1997. The program plan establishes regulations which will become effective in phases based on the number of customers served by a public supply facility. This program is administered by the IDEM Office of Water Management, Drinking Water Branch, Ground Water Section.

Tuesday, March 2, 2021

What do you think of the hearing so far. They mentioned they know we are here but will not contact us until the development permit stage.

12:04

We acknowledge Treaty 7 territory —the traditional and ancestral territory of the Blackfoot Confederacy: Kainai, Piikani and Siksika as well as the Tsuu T’ina Nation and Stoney Nakoda First Nation. We acknowledge that this territory is home to the Métis Nation of Alberta, Region 3 within the historical Northwest Métis Homeland. We acknowledge the many First Nations, Métis and Inuit who have lived in and cared for these lands for generations. We are grateful for the traditional Knowledge Keepers and Elders who are still with us today and those who have gone before us. We make this acknowledgement as an act of reconciliation and gratitude to those whose territory we reside on or are visiting.

Re: Mountain Ash Limited Permit Application PRDP20211744

Dear Rocky View Councillors,

I am writing you today as a regular user of the Highway 567, to raise the many safety concerns that I have with the current roads and the impacts on expanded use of this highway for industrial purposes. Council must acknowledge the cumulative effects of these gravel trucks entering the traffic stream on Highway 567. Please find the below concerns, as cause for Rocky View to oppose the application until a further traffic assessment can be completed, and until upgrades to the highway can be completed.

Traffic Concerns:

- The estimated number of daily 2-way trips by gravel trucks were estimated to be just under 300 two-way trips per day by both existing and proposed gravel operations, however a 2017 report by Bunt and Associates noted that the Hillstone pit created 234 trips alone, and this was 4 years ago.
- The volume of trucks on the road network and the percentage of heavy trucks in traffic needs to be considered on the 567 as well as the impacts on the broader road networks such as Lochend Road.
- Summit pit claims that 90% of gravel trucks will head eastbound on Highway 567, and this is a more complicated route due to the steep inclines and declines into the various coulees that dot the landscape between Bill Hill Springs and Airdrie.
- Passing zones are available in just 30% of the route along 567, so passing opportunities are limited. Slow moving vehicles and the resulting queues result in risky and illegal passing manoeuvres.
- It was noted that at the top of the inclines, heavy trucks often slow to less than 50 km per hour on a 100 km posted speed route, creating long queues and frustrated drivers who in turn drive in a dangerous manner.
- The main gravel routes (567, 566, 772 and 766) have neither climbing lanes nor passing lanes leading to the formation of long queues of vehicles.
- Except for the intersections at Highway 22x and 766, there are no left-hand or right-hand turning lanes, forcing the vehicles following to slow down significantly or stop altogether whilst the proceeding vehicle completes its turn. This includes range roads AND private driveways.
- The narrow shoulders are inadequate for bicycles to safely share the road with vehicles, especially heavy trucks. There are other vulnerable users as well, including school buses, motorcyclists, farm equipment and overload vehicles (eg: drilling rigs).
- Wildlife crossings are noted for drivers, but the problem is exacerbated with the Big Hill Springs Provincial Park being a refuge for wildlife. Moose are killed often along this stretch of the road.

Notable events over the past 4 years on Highway 567:

- May 2017 - head on collision on Highway 567. A man in his 20's was killed in a collision between a pickup truck and a semi-trailer
- September 2017 - a collision between a pickup truck and a dump truck resulted in the death of a Cochrane resident
- July 2018 - STARS was called for a fatal crash between a motorcycle and a SUV
- May 2019 - a 17 year old died and 2 seniors were sent to hospital due to a collision on the highway
- October 2020 - STARS was called for a collision on 567 resulting in serious injuries to all parties
- September 2020 - a collision occurred between an SUV and a cement truck turning left from the 567 onto RR 35
- June 18 - I arrived at Highway 567 and Lochend Road to a 3 car collision
- June 28 (yesterday) - a collision resulted in the death of a person near 567 and Bearspaw Road

I recommend at Rocky View Council oppose the permit until:

- The proponent completes traffic studies to the east route of the Summit Pit.
- Left- and right-hand turning lanes are constructed.
- Wildlife crossings and fencing are constructed in the wildlife in the coulee area near the Park.
- Expanded shoulders for bike users.

Sincerely,

Jennifer Foss

Re: Mountain Ash Limited Permit Application PRDP20211744

Dear Rocky View Councillors,

Thank you for the opportunity to provide comments on the Mountain Ash Limited Partnership (MALP) permit application (PRDP20211744). I am writing you this letter today, as a concerned citizen and as an advocate for public users of the Big Hill Springs Provincial Park.

Given the vast natural resource potential located in Rocky View region, Council should consider projects that are best in class so that they can become a world leader in gravel pit extraction and attract companies with strong operational track records. Best-in-class mines have strong relationships with their stakeholders, First Nation inclusion, innovative technologies and mining techniques, environmental soundness, dedication to sustainability and biodiversity, a local hiring and contract procurement strategy, training opportunities, economic impact evaluation, limited impacts on roadways, contributions to the local community, and broad public support; none of these components exist within the MALP Master Site Development Plan (MSDP)

Unfortunately, MSDP approved by Council on March 2, 2021 had many flaws, which we as the public were unable to question or defend given the online format of the special Council meeting. The PhD hydrologist, geologist and Professional Engineer that opposed this project was unable to defend his sound scientific research - this is a cause for concern. Further opposition from Alberta Environment and Parks and Indigenous communities was missed, and their concerns should be addressed until a permit application is approved by Rocky View Council (RVC).

Current aggregate production in Rocky View hosts enough resources to support expansion in Calgary and surrounding area for the next 47 to 147 years. If development is conservative gravel extraction will last 147 years; meanwhile, if expansion is rapid there will be enough gravel to sustain development for 47 years. With that being said, RVC should only approve projects that are committed to being best-in-class with a longstanding and proven track record. MALP does not fit this segment of leading extraction companies.

I encourage you to oppose this permit application until these gaps are addressed by the proponent, and they improve their fractured relationships with their neighbours and Indigenous communities.

Vast Public Opposition

On May 28, 2021, I started a petition on [change.org](https://www.change.org) an online petition platform that allows decision makers to consider public appeal so that they can make decisions that encompass broad societal perspectives. The virtual nature of the website served as a way for the public to express their views while still adhering to COVID-19 restrictions. The public petitioned Rocky View Council to protect Big Hill Springs Provincial Park by ensuring no large-scale industrial development occurs within 5kms of the Park. From May 28, 2021 through to June 30, 2021 (on the date of which I write with this letter), **this petition received 9,847 signatures**, and was shared 2,805 times. Many of those who signed left an

additional comment, which I recommend that you consider. I would like to bring to your attention a handful of comments that I found specifically impactful.

Big Hill Springs and Big Hill Creek need to be protected from potential damage due to gravel operations being located too close by. We really need to treasure our freshwater and the life it supports and not allow industrial activities that threaten these natural resources. – Margaret O'Regan, Cochrane

I'm signing because I love Big Hill Springs. It's proximity to Airdrie has greatly improved my mental health on many occasions. After a tough week at work being able to take a quick drive to hike in Big Hill Springs is a wonderful release of stress. The trees and birds, the dog friendly hike, just connecting and grounding back with nature. Please don't ruin this hidden gem. - Chellaine Dueck, Airdrie

We love this park and want to preserve its integrity and natural habitat as much as possible!! – Jim Krahn, Calgary

This is a beautiful natural area and it will be forever impacted by putting a gravel pit here, the dust, the noise, the traffic on narrow roads. Not to mention wildlife impact, water, plant life impact. Big Hill Springs needs to be protected for us all. – Ali Morrison, Cochrane

Big Hill Spring is a critical waterway for an uncountable number of flora and fauna. The creek flows into major town parks such as Cochrane Ranche, and the loss of water quality could be detrimental to many areas down stream. - Fisher Stephenson, Cochrane

I have attached the petition signatories, and additional comments for your review. The overwhelming support of this petition is evidentiarily that the public would like to see a buffer around the Park. It is my hope you take the broad public opinion into consideration when considering the permit application put forth by MALP.

Recommendation:

- Work collaboratively with Indigenous communities, stakeholders, industry and government agencies to develop an aggregate resource extraction plan prior to approving the permit application.

Indigenous Consultation and Traditional Land Use

The Summit Pit project is part of the Traditional Territory of Treaty 7. On February 11, 2021, the Stoney Nakoda First Nations (SNFN) requested that RVC and MALP to consult with them and provide them more time to evaluate the project. Additionally, the Tsuut'ina First Nations was caught off guard with the March 2, 2021 public hearing, as they were not aware of the project and felt like their voices should have been missed prior to the land redesignation decision; they have since requested to be consulted with prior to the approval of the permit.

The Duty to Consult is an important step toward reconciliation with Indigenous peoples and must be fulfilled by the government and industry prior to taking actions or making decisions that may have consequences for the rights of all Indigenous peoples in Canada. How can we improve our relationship with our First Nations, if we continue to infringe on their rights and ignore their voices?

Indigenous peoples have a long history utilizing the Big Hill Springs Provincial Park, and surrounding area. Paskapoo formation cliffs that form the ridge surrounding the Park were used as buffalo jumps for hunting purposes. Moreover, the springs represents a once important usage for First Nations due to its quality, clarity, and abundance. The jump, along with the fresh water from the springs made this area a highly prized camping and hunting location for Indigenous peoples. **According to the SNFN, this area also hosts a burial site, and was also used for other ceremonial and spiritual purposes. Despite these well-known Traditional Land Uses, the Duty to Consult was ignored – this must change.**

Throughout other areas in Rocky View County, aggregate companies acknowledge the Traditional Territory of where they intend to mine, and these companies' MSDP plans include input from Indigenous stakeholders. Yet, the MSDP approved on March 2, 2021 did not include any consultation.

I would like to express my support with the SNFN and the Tsuut'ina First Nations, and believe that RVC should reconsider moving forward with a permit until meaningful consultation with Indigenous stakeholders is included in the MSDP.

Recommendations:

- Require MALP to embark on meaningful consultation with the SNFN, Tsuut'ina First Nations Blackfoot Confederacy Tribal Council, and any other impacted First Nations.
- MALP to resubmit an amendment to their MSDP that includes input from impacted Indigenous peoples.
- RVC to request Mountain Ash to complete an Archeological Study, Traditional Land Use Assessment and Historical Resource Assessment.

Stakeholder Engagement Best Practices

In the MSDP approved at the March 2nd hearing, Mountain Ash outlined one of their policies to work with their neighbours. Policy 23.2 reads as follows:

Mountain Ash shall enter into a Good Neighbour Agreement with interested neighbours, at the development permit stage, to establish appropriate protocols and procedures to respond to expressed concerns on a timely basis (see page 45 of the MSDP).

Since March 2nd the proponent has recanted on their Good Neighbour policy numerous times, and the limited stakeholder engagement completed to date has been hostile, deceiving, and strongarmed. I will highlight some of the major concerns that I have encountered with MALP during only a few interactions with them.

- Mountain Ash first reached out to consult with me on June 2, 2021, exactly two months after the March 2nd hearing. Council cited that local stakeholders did not engage with MALP, but this is untrue. I was not approached and only became aware of the project from one of my neighbours one week prior to the March 2nd hearing.
- From June 2-6, 2021 I requested MALP to provide engagement summaries and dates. These inquiries were made via 8 different emails and 2 verbal requests to the project manager and CEO. With each request, the proponent directed me to their website indicating that this information could easily be found on it. However, I have extensively searched the entire website

but have been unable to locate this information. I requested that this link be sent directly to me, but this request was never awarded.

- Executive Director, Bruce Waterman, has stated to me in numerous emails that he does not want to engage with anyone in opposition to the project, and immediately stopped conversing with me once he was made aware of the online petition.
- On June 14, 2021, the Project Manager, Tige Brady threatened to sue me for libel and defamation when I raised my concerns about a public support letter for their MSDP and their stakeholder engagement process. These concerns were raised in a private email to Waterman and Brady.

I am gravely concerned that Mountain Ash will not act as a Good Neighbour to anyone who holds differing views than them. MALP has yet to begin operations but they are already doing so in contrary to their own policies. The company's limited and already poor track-record as it relates working with stakeholders should be considered in their permit application currently in front of RVC.

Recommendation:

- Request further clarity and a strategic plan on how Mountain Ash will engage with stakeholders who are opposed to the project.
- Consider MALP's already poor track record as grounds to oppose the permit application.

Environment

There are significant environmental impacts that have not been considered by MALP, as it relates to biodiversity, species at risk, water, and air quality. Moreover, given the close proximity to another gravel pit, these impacts are cumulative and have not been examined by the proponent.

Water Quality

The effects of mining from the Summit Pit as it relates to water have been explained to me in layman's terms using the example of a French Press. Removing top soils and overburden which act as a screen would impact the water in the same manner as pouring a cup of coffee from a French Press without pushing the screen down to filter the coffee. The top layers of the earth act as a screen, and by removing this sediment, the water quality diminishes. Moreover, the recharge area is also depleted as mining ensues in the region. These effects will have significant impacts to well users, a local water-coop, the Big Hill Springs and Creek, and lastly the Bow River which provides water to Calgary residents.

Since the March 2, 2021 hearing we have procured Dr. Jon Fennel to complete a soil column flushing experiment designed to mimic infiltration of snowmelt and rainwater through the sand and gravel deposits beneath MALP's proposed Summit Pit area. In addition to turbidity, the chemical quality of the effluent water was also notably changed after flowing through the soil column. I support the studies completed by Dr. Jon Fennel, and I encourage you to consider his study and most recent experiment in your decision making. **I am concerned that MALP has not conducted these studies to understand the impacts their operations will have to local water quality and quantity.**

Recommendation:

- Request the proponent to complete a soil column study.
- Commission a third-party to re-examine water quality impacts.

Species at Risk

There are two species at risk located in the region, including grizzly bears¹ and bees². The Big Hill Springs and Creek also have the correct conditions to support bull trout, listed as protect species under the *Species at Risk Act*. It is no doubt that these species are vital to our future ecosystems, which is evidenced by the great lengths that both the federal and provincial governments have gone to safeguard these animals. Bees are catastrophically impacted by dust raised by gravel extraction. Grizzly bears could be hit on the highway, or could be driven to more urban areas to take refuge causing safety concerns to the public. Both of these species are also negatively impacted by the noise caused by operations, and are directly impacted through changes to water quality.

Recommendation:

- Request further information from the proponent on how they will protect species at risk located in the region.

Health Concerns and Dust Control

Fugitive dust from gravel production is inevitable, and mitigation measures for pits and quarries of this manner are inadequate. [Studies](#) show that fine particulate matter poses a greater danger to our health than other kinds of air pollution, such as smog, sulphur dioxide, and carbon monoxide. Fugitive dust also increases corrosion and is harmful to vegetation. **Even best in class technology does not fully safeguard impacts caused by dust, and the limited mitigation outlined in the MSDP does not even compare to current best in class technology for dust suppression used broadly by the aggregate sector.** Furthermore, **wet dust suppression where there are already water concerns is simply not adequate.**

Recommendations:

- Require MALP to use alternative dust suppression techniques including best-in-class water technologies.
- Further studies on impacts to water quality and volume for the use of wet dust suppression to be studied by the proponent.
- MALP to examine health impacts of the gravel pit operations and to provide these findings to the public, in coordination with the Ministry of Health.

Local Economic Benefit

A singular gravel mine have only added \$800,000 in annual gross revenue to the County of Rocky View. The costs on society to facilitate gravel operations far exceeds any revenues received - road repairs, damage to the environment, health impacts, enforcement issues, traffic accidents and the danger of thousands of gravel trucks on the roads. These negative impacts then fall onto the backs of local tax payers to remedy. **Given the mere the economic benefits, value add must to be examined as it relates to job creation, procurement of local contractors, and indirect impacts should be provided prior to the County ruling on such a controversial pit.** Economic benefits must far exceed the negative impacts gravel pit extraction has on broader society.

¹ As per, Fish and Wildlife notification of a collared grizzly and other grizzly sightings in the area.

² Located at the K2 Honey Farm less than a 1km distance from the Summit Pit.

Recommendations:

- Mountain Ash to provide an economic development plan that outlines direct and indirect economic contributions and value add to the local economy.
- Mountain Ash to provide a hiring and local contractor procurement plan to ensure investments remains within the County.

Safety Plan

Operational safety is reflective of a company's ethos. Safety should be a number one priority for industrial operators, and should be regulated by all levels of government. **It is the right of employees to work and go home from their jobs safely. Yet, the MDSP did not indicate any safety plans or procedures for their employees. Council must protect all citizens by implementing decisions that warrant workplace safety. Employees go to work because they trust that their company is following all the required regulations to ensure a safe workplace, and it is up to government to hold companies accountable who do not show any devotion to safety.**

Recommendation:

- Require MALP to procure a third-party consultant to develop a safety plan that include items such as safety meeting frequency, objectives, training, evacuation procedures, mental health, worker fatigue, and other relevant items that safeguard occupational health and safety.

Traffic

Mountain Ash has stated that 90% of gravel trucks will head eastbound on Highway 567, and this is a more complicated and dangerous route due to the steep inclines and declines into the various coulees that dot the landscape between Bill Hill Springs and Airdrie. The narrow shoulders of this highway are inadequate for bicycles to safely share the road with vehicles, especially heavy trucks. There are other vulnerable users as well, including school buses, motorcyclists, farm equipment and overload vehicles (eg: drilling rigs). Wildlife crossings are noted for drivers, but the problem is exacerbated with the Big Hill Springs Provincial Park being a refuge for wildlife that often cross the highway. Moose, deer and other fauna are often killed along this stretch of the road, and two fatal accidents with moose collisions have occurred over the past two years directly across from the proposed Summit Pit. Along with these collisions, this route had seen the following events over the past few years, to name only a few:

- May 2017 - head on collision on Highway 567. A man in his 20's was killed in a collision between a pickup truck and a semi-trailer;
- September 2017 - a collision between a pickup truck and a dump truck resulted in the death of a Cochrane resident;
- July 2018 - STARS was called for a fatal crash between a motorcycle and a SUV;
- May 2019 - a 17-year-old died and 2 seniors were sent to hospital due to a collision on the highway;
- October 2020 - STARS was called for a collision on 567 resulting in serious injuries to all parties;

- September 2020 - a collision occurred between an SUV and a cement truck turning left from the 567 onto RR 35;
- June 18, 2021 – a 3-car-collision on Highway 567 and Lochend Road; and,
- June 28, 2021- a collision resulted in the death of a person near 567 and Bears paw Road.

Recommendations:

- Require Mountain Ash to complete a traffic assessment on the east bound route that they plan on using for 90% of their gravel trucks.
- MALP to afford road upgrades going eastbound, including:
 - Left-hand turning lanes;
 - Wildlife crossings and fencing; and,
 - Expanded shoulders for bicycle usage.

Precedence

In 2008, the CEO of Mountain Ash, Bruce Waterman, the property owner at the same site of the proposed MALP Summit Pit, provided opposing comments on another gravel pit located nearby; Waterman wrote RVC stating that he was “extremely OPPOSED” to a gravel pit development in the area. Waterman is now leading MALP with the proposed project expected to be located on the same property that he was trying to protect in 2008. If approved his mine would be substantially larger and closer to the Park than the mine Waterman previously proposed. Waterman cited three reasons on why he was opposed to gravel mining in the area (see below excerpt from his 2008 letter):

- 1) It is NOT compatible with the other existing uses in the neighbourhood. It is an area almost exclusively designated to agricultural/ranching activities.
- 2) If approved, this would result in INCREASED TRAFFIC on Big Hill Springs Road...especially with big transport vehicles. Inherent with the operation of a gravel pit, there will be CONSTANT vehicle access to Big Hill Springs Road....this increases the risk of accidents and of potentially a more fatal nature.
- 3) If approved, this would DISRUPT the QUIET ENJOYMENT of our property. Not only will there be an increase in noise levels, but also the air quality would be contaminated with higher levels of dust.

The reasons for Waterman’s opposition letter remains true to today, and should be considered at part of RVC’s decision to oppose the MALP permit application. The 2008 gravel extraction application (07801003) was voted down with only 1 Councillor in favour. The 8 Councillors in opposition included the Reeve at the time and current RVC member Greg Boehlke.

Recommendations:

- Waterman to provide clarification on his concerns listed in his 2008 letter to the public and how these same concerns will be addressed by MALP.
- Further clarification from Councillor Boehlke on why Waterman's opposition letter was considered as part of his decision to oppose a gravel mine located in the same area in 2008 but not in 2021.
- Consider the 3 reasons cited by Waterman as part of Council's decision on MALP permit application.

Conclusion

In light of the many concerns and gaps in the MSDP combined with MALP poor and neglectful stakeholder engagement track record with the public and Indigenous communities, I strongly recommend that Council opposes this permit application until impact studies can be complete. Future stakeholder engagements on behalf of the proponent needs to improve until a decision on this permit is considered. Moreover, the petition that has received 9,847 signatures should be deeply considered by Council as grounds to oppose the MALP permit application.

I hope that Council takes into great consideration the above-mentioned recommendations and the overwhelming opposition from the public when deciding on this permit application.

I appreciate your time in reviewing my letter and recommendations. If you require any further information about the contents found in this letter, do not hesitate to reach out to me directly.

Warm regards,

Aynsley Foss

Attention: Kate Beatson

Dear Ms. Beatson

Re: Application # 2008 RV -087, File #07801003

Thank you for your letter dated March 18, 2008 regarding Proposed Land Use Designation for the above mentioned File Number. Our property (File #05731002: Waterman) is in the immediate vicinity of the land requesting the redesignation. We are extremely OPPOSED to the application for the following reasons:

- 1) It is NOT compatible with the other existing uses in the neighbourhood. It is an area almost exclusively designated to agricultural/ranching activities.
- 2) If approved, this would result in INCREASED TRAFFIC on Big Hill Springs Road...especially with big transport vehicles. Inherent with the operation of a gravel pit, there will be CONSTANT vehicle access to Big Hill Springs Road....this increases the risk of accidents and of potentially a more fatal nature.
- 3) If approved, this would DISRUPT the QUIET ENJOYMENT of our property. Not only will there be an increase in noise levels, but also the air quality would be contaminated with higher levels of dust.

If you have any questions/comments regarding our concerns, please do not hesitate to contact me at [REDACTED]

B. G. Waterman

**Re: Letter of Acknowledgment - Consultation with Stoney Nakoda First Nations (SNFN) –
Rockyview County Municipal Development Plan - SCT 061-1097 (2021).**

Dear Dominic,

Thank you for your recent correspondence providing information about the above cited project.

Attached is a copy of the Stoney Information Letter (SIL) for you to review, and an SIL Form for you to complete for this project. The SIL contains important information about the Stoney Consultation Process, and is an important first step. The SIL Form is also designed to provide project information to the Stoney Consultation Team in a clear and consistent manner. Note that not all questions on the SIL will be applicable to your project.

We have conducted an initial review of your proposed project and note that it does impact Stoney Treaty Rights and Traditional Uses in the proposed project area. As signatories to Treaty Number 7 in 1877, the Stoney Nakoda First Nations have aboriginal and treaty rights entitlement throughout the 50,000 square miles encompassing Treaty 7 territory, and beyond. The SNFN have historic trails, campsites, hunting areas, fishing waters, ceremonial & spiritual sites, trade routes, grave sites, and gathering areas throughout our historical territory. As such we do have site specific concerns, but cannot share the information without an agreement due to intellectual property and protocol concerns. We will require more time to evaluate your project, at which time will be placed in the queue and provided the project number: SCT 061-1097 (2021).

Thank you for your interest in working with the Stoney Nakoda Nations.

Sincerely,

William Snow
Stoney Consultation Manager

Attention: Friends of Big Hill Springs Provincial Park

**Re: Soil column flushing experiment – Addendum to Fennell (2021)
review of MALP Summit Pit application**

Mountain Ash Limited Partnership (MALP) has applied to the Rocky View County to develop a gravel pit (the Summit Pit) within the headwater area of the Big Hill Springs complex. The proposed pit location is approximately 3.3 kilometers east on Highway 567 from the Highway 22 intersection. A hearing on 02 March 2021 was held to review the merits of this application (re: Bylaw C-8051-2020). Prior to that hearing, a report was filed by Dr. Jon Fennell (Fennell 2021) identifying the risks associated with this development regarding the mobilization of turbidity and various other constituents. The occurrence of elevated concentrations of certain metals and trace elements was also a concern given the disruption to the natural system that will occur as a result of gravel extraction.

Figure 1. Mapped preglacial channel for Big Hill Springs (left)¹, where dot-dashed lines indicate extent of buried tributaries, and extent of lands owned by gravel operators near Big Hill Springs Provincial Park (right)² *Note: MALP property outlined in red.*

¹ Excerpt from Figure 22 of Poschmann (2007)

² Excerpt from a figure provided by Bighill Creek Preservation Society

The following is a summary of an experiment conducted on a sand and gravel sample obtained from Hillstone Aggregates, an operating pit located approximately 800 m west of the proposed Summit Pit. Hillstone Aggregates is accessing this sand and gravel from the same deposit that MALP intends to mine (see Figure 1). Therefore the assumption of similar physical and chemical properties is reasonable. The proposal that MALP has put forward for the Summit Pit is to mine the 20-30 m thick accumulation of sand and gravel to within 1 metre of the water table, which is located very close to the underlying fractured bedrock. The purpose of this test was to mimic the physical and chemical changes to infiltrating precipitation flowing through a relatively thin veneer of remaining sediment before entering the local groundwater.

Methodology

Prior to the soil column test on 30 May 2021, a representative sample of sand and gravel was procured from Hillstone Aggregates. The mixture of clay, silt, sand and cobbles was loaded into a pre-cleaned 1.5 m x 51 mm ID PVC pipe to produce a vertical soil column mimicking what would be left beneath the Summit Pit after mining. A pre-cleaned plastic container was used to load the soil mixture into the PVC pipe, thus avoiding the use of any metallic equipment and possible cross-contamination. Prior to loading the sample, the base of the PVC pipe was covered with cleaned fibreglass mesh to retain the soil in the pipe. Once mounted in a vertical position, compaction of the sediment was achieved by tapping the outside with a small hammer and a thickness of 1.2 m was confirmed. The column was then hydrated with laboratory-grade filtered and purified deionized water, obtained from Bureau Veritas (BV), and left overnight.

The following day, the mounted soil column was slowly hydrated with the deionized water to mimic infiltration of snowmelt and rainwater. Once the water began draining from the base of the PVC pipe, unfiltered samples were collected into sample bottles provided by BV (i.e. HDPE and glass, where required). During the testing procedure, photographs were taken to document the process. Visual turbidity of the samples was noted at the time, as indicated in the lower images provided in Figure 2.

Once collected, effluent water samples were placed in an ice-filled cooler to maintain their integrity while in transit to the BV lab in northeast Calgary AB. Standard chain-of-custody (CoC) protocols were followed to track the shipping and handling process, a copy of which is provided in Appendix 1 along with the official Certificate of Analysis.

Figure 2. Experimental setup, execution, and sample turbidity noted.

Analytical program

A relatively comprehensive analytical program was executed to assess changes to the deionized water after flowing through the soil column. Analysis was completed for the following:

- pH, alkalinity, hardness, and turbidity,
- major ions (calcium, magnesium, sodium, potassium, bicarbonate + carbonate, sulphate, and chloride),
- nitrate and nitrite, and
- metals and trace elements (including mercury).

All samples were received in good order, as documented by BV. Sample temperatures were logged in at less than the required 10°C threshold and were received within the required time limit for sensitive parameters including turbidity and nitrate+ nitrite. The high quality of the deionized water used by the lab was confirmed in the Quality Assurance section of the BV Certificate of Analysis provided in Appendix 1.

Results

Filtered and purified deionized water is by nature devoid of any particulate matter or dissolved constituents. This water is typically used to clean equipment and use for analytical testing so as to avoid contamination of results obtained. Measurement of the deionized water provided by BV with a hand-held total dissolved solids (TDS) meter confirmed a “zero” mineralization content on the day of testing. The pH and temperature of this water were also measured at the same time using a hand-held combination meter. A pH value of 5 (similar to natural precipitation) and a temperature of 17.4°C, were noted.

After confirming the starting conditions of the deionized water, it was slowly poured into the top of the PVC pipe and left to flow through the sediment column. Repeated additions of deionized water were made to ensure facilitate the flow of effluent from the base of the soil column. A head of 25 cm of water was placed over the sediment mixture at one point, and the rate of decline was noted. The time for the water to drop 19 cm took approximately 10 minutes. Estimation of the associated hydraulic conductivity yielded a value of about 1×10^{-5} m/s consistent with the relatively porous sediment mixture tested.

Samples collected from the base of the PVC pipe appeared very different compared to the clean filtered deionized water added at the top. Of particular note was the colour and turbidity. This is evident in the lower images in Figure 1. The occurrence of such turbidity is surprising considering the assumption often made that fine particles will be strained or filtered out as water moves through the subsurface materials. This was obviously not the case. The measured turbidity value for the effluent water was 160 NTU - much higher than the deionized water (<0.1 NTU, as noted for the Method Blank documented in Appendix 1).

In addition to turbidity, the chemical quality of the deionized water was also notably changed after flowing through the soil column. For example, a notable change in the total dissolved solids (TDS) content, or mineralization, from a pre-test value of 0 mg/L to 53 mg/L was documented. The laboratory pH (7.1) also increased compared to the pre-test deionized water (pH = 5). These changes are indicative of soil:water reactions and the mobilization of soluble constituents from the soil.

To confirm correctness of the analyses, a review of the anion-cation charge balance was made. The value obtained (-0.41%) was within the recommended standard of $\pm 2\%$ ³. An additional test was performed where the ratio of reported TDS versus calculated TDS was compared. The range of acceptability is a value anywhere between 1.0 to 1.2¹. The value obtained was 1.0. Based on these confirmations the results were considered acceptable.

As for the chemical changes noted, a number of constituents yielded values in excess of published water quality guidelines. The guidelines used for comparison in this study were as follows:

- Alberta Tier 1 Soil and Groundwater Remediation Guidelines – for agricultural land (Alberta Government 2019)
- Environmental Quality Guidelines for Alberta Surface Waters – for the protection of freshwater aquatic life - FWAL (Alberta Government 2018)
- Guidelines for Canadian Drinking Water Quality - CDWQ (Health Canada 2020)

Table 1 on the following page summarizes a number of parameters in the soil column effluent water that exhibited values in excess of the above-noted guidelines. For the purpose of comparison, and where applicable, a water hardness of 310 mg/L (as CaCO₃) was used to be consistent with the calculated average for baseline groundwater quality beneath the MALP property (as reported by SLR 2020).

Measured values for the other constituents not shown are provided in the Certificate of Analysis in Appendix 1. However, those listed in Table 1 do represent the most notable in terms of risk to human and ecological health - in this particular case:

- local water wells near the proposed Summit Pit,
- the Big Hill Springs complex, and
- Bighill Creek.

³ Standard Methods for the Examination of Water and Wastewater

Table 1. Results for selected parameters following reaction of deionized water with the sand and gravel sample, and comparison with published guidelines.

Parameter	Soil flush #1	AB Tier 1	AB FWAL	CDWQ
Turbidity (NTU)	160	--	2	1
Aluminum (mg/L)	2.1	0.05		<0.1 OG
Arsenic (mg/L)	0.013	0.005	0.005	0.010 ALARA
Chromium (mg/L)	0.0044	0.001 ⁺ 0.0049 ⁺⁺	0.001 ⁺ 0.0089 ⁺⁺	0.05 MAC
Cobalt (mg/L)	0.0025	0.0016*		--
Iron (mg/L)	7.2	0.3		≤0.3 AO
Manganese (mg/L)	0.47	0.05	--	0.12 MAC
Zinc (mg/L)	0.065	0.030		5.0 AO

Notes:

1. *Values indicated for protection of freshwater aquatic life relate to long-term exposure.
2. ⁺ = Hexavalent; ⁺⁺ = Trivalent.
3. FWAL = freshwater aquatic life; CDWQ = Canadian drinking water quality
4. MAC = maximum acceptable value; ALARA = as low as reasonably achievable; AO = aesthetic value; OG = operational guidance value.

Discussion

If developed, the Summit Pit will represent a significant, and permanent, alteration to the sensitive headwater area of the Big Hill Springs complex. Although MALP's contention, and that of their consultant's, has been that any changes to the local groundwater (and by extension connected surface water systems like Bighill Creek) will be negligible, that claim has never been substantiated with any evidence. Baseline groundwater quality reported by SLR (2020) did confirm the presence of harmful metals and trace elements beneath the property, which was flagged as a concern in Fennell (2020). Although these are natural occurrences, their existence does indicate the ability to be mobilized under the right conditions.

Stripping of the overlying topsoil and glacial till materials, removal of a substantial amount of the sand and gravel (20 m or more) and leaving only a thin veneer of the deposit (1-2m) will inevitably reduce the filtering potential for any water moving down from the surface to the water table. Recharging snowmelt or rainwater through a thin remaining layer of sand and gravel will enhance the ability to move particulate and dissolved matter into the underlying groundwater via a flushing action, much like this test has demonstrated. The effect will be for any contaminants

associated with, or caused by, the mining process (natural or otherwise) to be mobilized down to the water table and into the underlying fractured bedrock. It important to acknowledge that the fractured bedrock will afford even less filtering potential than any remaining sand or gravel due to the lack of “straining” effects.

Figure 3 is an excerpt from a presentation made to the Rocky View County council members on 02 March 2021 showing how this flushing of contaminants would physically manifest itself.

Baseline condition

Disturbed condition

Figure 3. Conceptual diagram for proposed Summit Pit development showing change to site conditions and associated risk to aquatic receptors

Based on this experiment it is clear that turbidity can be produced by flushing water through a 1.2 m interval of sand and gravel consistent with what is beneath the MALP property. It is also clear that the chemical quality is notably changed after doing so. This suggests that mining out a

significant thickness of sand and gravel from a large development area, located in a sensitive headwater area of an important spring complex, poses a risk to local groundwater users relying on the Domestic Use Aquifers in the area, as well as any connected aquatic receptors like Bighill Creek.

From a federal *Fisheries Act* perspective this is pertinent. The potential introduction of harmful substances into fish-bearing systems is in direct contravention of the *Act*, not to mention other provincial legislation put in place to protect Alberta's wildlife and the supporting environment. The fact that Bighill Creek has unique fish habitat, as a direct result of discharge from Big Hill Springs, (with conditions suitable for Bull Trout and West Slope Cutthroat Trout recovery should be cause for concern. The turbidity guideline for protection of freshwater aquatic life in Alberta requires that the maximum long-term average for "clear" water systems be kept within 8 NTU above background values for any short-term exposure (e.g. up to 24 hours). And, over the longer-term the increase should not be more than 2 NTU above background values (Alberta Government 2018). The turbidity produced from this experiment was 160 NTU, or at least 20 times.

As noted in Fennell (2021), mobilization of turbidity into groundwater systems has been documented before near sand and gravel mining operations, with measurable effects being noted as far as 1.8 km downgradient. The following quote is taken from a report authored by Mead (1995):

"This DEQ [Department of Environmental Quality] study found a turbidity plume that extended more than a mile to the north (downgradient) of the gravel operation. The average turbidity of the water being discharged from the washing operation into the pond at the site was 2,737 nephelometric turbidity units (NTUs). Nearly all wells sampled within the first 6,000 feet of the turbidity plume were measured at 5 NTU or more. Many wells within the first 3,000 feet of the plume had turbidity levels of 10 NTU or more. Nearly all wells outside the plume had turbidities of 2 NTU or less."

In the Summit Pit area there are a number of private water wells located outside the proposed development area and towards the east and southeast, with the closest being within 656 feet (200 m). this information was taken directly from Table 1 of SRL's 2020 report (pdf page 14). Although this has been documented, and some baseline testing has been performed for selected water wells, no further risk assessment has been conducted leading to concerns regarding possible human exposure to harmful contaminants.

As for the mobilization of other constituents, like metals and trace elements, there is a lack of published information regarding the effects of sand and gravel mining operations. However, this experiment should fill that gap to some degree. In Fennell (2021), the potential for existing conditions to form more toxic and mobile metal species, like hexavalent chromium, exists in the study area. This is based on data generated by SLR (2020) and the likely presence of oxidizing

conditions in the groundwater (which will be further exacerbated by mining close to the water table and exposing the pit sediments to air). The hexavalent chromium guideline for protection of freshwater aquatic life is 0.001 mg/L, and the measured value obtained from this experiment was over 4 times that, at 0.0044 mg/L. Arsenic, another toxic trace element, was also measured at almost 3 times the guideline for freshwater aquatic life (i.e. 0.013 mg/L). It also exceeded the maximum acceptable concentration for human consumption, which is 0.005 mg/L.

Unfortunately, MALP has not acknowledged any of this potential risk or done any work to assess it. Instead, they have relied on statements like “impacts will be negligible” without any proof. Given the results of this soil column experiment, which is arguably some proof that things can occur, there should be cause for concern by anyone approving this sand and gravel mining activity. The Summit Pit, if developed, will be located very close to sensitive aquatic receptors and residential water wells. This should have triggered a proper risk assessment beyond the requirements of the Code of Practice for Pits, and associated guidance document,⁴ which do not acknowledge risk associated with mobilization, transport, and fate of physical and chemical contaminants like the ones documented herein.

This situation leaves Rocky View County decision-makers and/or federal and provincial regulators (i.e. Department of Fisheries and Oceans; Alberta Environment and Parks) with no information to make an informed decision on whether developing a gravel pit in a sensitive headwater area of an important spring complex, serving a cherished park and unique fish habitat is a good idea or not. And, based on the evidence provided here the risk from this proposed development, and any other gravel mining operation near Big Hill Springs Provincial the park, is too great to ignore.

⁴ Alberta Government 2004 and Alberta Environment 2004

Closure

This report has been prepared to summarize results of a soil column flushing experiment designed to mimic infiltration of snowmelt and rainwater through the sand and gravel deposits beneath MALP's Summit Pit area. The content is meant to inform those making land use decisions to the risk of unintended consequences to the environment and potentially impacted residents from such developments. It also underscores the need to develop lands responsibly. As outlined in Fennell (2021), and supported by a letter from Alberta Parks, implementation of a suitable setback distance (e.g. 1.6km) from the park boundaries would be a reasonable decision.

If there are any questions regarding the methodology or interpretation of findings provided herein, the reader should contact the undersigned for clarification.

Respectfully submitted by:

Jon Fennell, M.Sc., Ph.D., P.Geol.
Hydrogeologist & Geochemist

Subject: Re: [EXTERNAL] - Re: Big Hill Springs Provincial Park
Date: July 2, 2021 4:22:56 PM

Yes please submit my video.

Written statement:

My name is Trent Daley, I live in Amiskwaciwâskahikan- Edmonton on Treaty 6.

I am an avidly enjoy the use of our Provincial Parks and I am deeply concerned about Gravel Development near Big Hill Springs Provincial Park.

I believe concerns of experts, residents, and others regarding the impact on flora and fauna via contamination of groundwater.

Albertans flock to Provincial Parks to take in the natural beauty- land as members of Treaty 6, 7 and 8- is a partnership with Indigenous peoples. Land to be respected and maintained.

I urge Rocky View County to reconsider this development and it's proximity to the park.

Thank you,

Trent Daley

Please find the attached petition and petition comments for the General Council meeting on July 13, 2021 for application PRDP20211744.

Warm regards,
Aynsley

Aynsley Foss

Recipient: Kevin Hanson, Minister Jason Nixon, Pete Guthrie, Keith Pridgen, Bev Yee, Stacey Smythe, Tom Davis, Darren Bourget

Letter: Greetings,

I petition the Rocky View Council to not proceed with permitting the Mountain Ash Summit Gravel Pit (permit PRDP2021744) at their July 13, 2021 General Council meeting. Instead, we recommend that there is a 5km perimeter surrounding the Big Hill Springs Provincial Park where no gravel pit development ensues. This would be completed either through a regulatory change under Alberta Legislation and in the meantime we petition Rocky View Council (Council) and the Alberta government to delay their decision on any aggregate mines that are located near the Park until further Indigenous consultation, public engagements and environmental and land use studies transpire. This is particularly important because:

- The project resides within Treaty Number 7 territory, and Stoney Nakota First Nations (SNFN) have Treaty Rights and Traditional Land Rights in the proposed project area. The SNFN Traditional Territory encompasses historic grave sites, trails, campsites, hunting areas, fishing waters, ceremonial and spiritual sites, trade routes, gathering areas, and a buffalo jump. The SNFN requested in a letter to Council on February 11, 2021 that they delay their decision until the community has further time to review this project. I support SNFN's request to be included in the consultation to evaluate the Mountain Ash Project and Rocky View Permit PRDP2021744, a request that was ignored by the proponent and Council. It is the governments obligation to ensure that the Duty to Consult with our First Nations is met – this was overlooked by Rocky View Council at the March 2, 2021 Special Council Meeting.
- An Archeological Study, Traditional Land Use Study and Historical Resource Assessment, was not completed by the proponent. Government must safeguard Indigenous rights and their Traditional Territory; all government agencies must ensure that all-natural resource development projects that have land disturbances do not proceed without comprehending the impact to our First Nation's Traditional Territory.
- The Alberta Environment and Parks officials urged Council to delay their decision until a thorough environmental review could be completed on behalf of Mountain Ash - a suggestion that was blatantly ignored. Dr.

Jon Fennell's studies regarding impacts to the watershed must not be discredited, as further mining in the area will have disastrous impacts to the springs, creek, local wells, water co-op hookups, and will eventually feed into the Bow River. Water, climate change, habitat, and other pertinent environmental effects have not been thoroughly studied. More scientific research is required to understand the impacts of industrial development before proceeding with any of these types of projects.

- The Park is in close proximity to Calgary, Cochrane, and Airdrie, the Park is regularly used by locals, and welcomes 250,000 visitors a year. During the COVID-19 pandemic, Parks became even more valuable to the public. In 2020, the province invested \$1.2 million to make significant upgrades to Park, which are now compromised by proposed gravel extraction.
- Over 95% of local residents do not support Council's decision, and have not been properly consulted with on behalf of the proponent nor Council. Local landowners plan on donating some or all of their land to the province to expand the Park, but will not proceed with doing so if large-scale development ensues.
- There are two species at risk that rely on the park, which were not considered in the Mountain Ash application. Impacts to these species will be devastating if any industrial development occurs near their habitat.
- Small-scale beekeepers are located in close proximity to the Park. These beekeepers play a key role in helping bees to survive and thrive in the Rocky View region - an area where they are already underpopulated. Bees are also critical in the pollination process for local agriculture crops. The Rocky View region's ecosystems without pollinators will be deprived, and gravel pit development has rapid, catastrophic impacts to the already marginal bee population in area.
- Hillstone Aggregates operates a gravel pit next door and the cumulative effects of a second gravel pit have not been studied.
- Highway 567 is an extremely dangerous road that is already unable to manage the current traffic requirements safely. Further upgrades are required to the road before there is any further development. Upgrades must include a wildlife crossing, expanded shoulders on the highway to accommodate bicyclists, left turning lanes on Bearspaw Road and Range Road 35, and a reduction in speed from 100km to 80km.

And lastly — in keeping with Alberta's commitment to Defend Alberta Parks, I do not wish to see any large-scale development within 5km of the Park to preserve the Traditional Territory of Treaty 7, protect the natural environment and to allow for continued public enjoyment of it.

Recipient: Kevin Hanson, Minister Jason Nixon, Pete Guthrie, Keith Pridgen, Bev Yee, Stacey Smythe, Tom Davis, Darren Bourget

Letter: Greetings,

I petition the Rocky View Council to not proceed with permitting the Mountain Ash Summit Gravel Pit (permit PRDP2021744) at their July 13, 2021 General Council meeting. Instead, we recommend that there is a 5km perimeter surrounding the Big Hill Springs Provincial Park where no gravel pit development ensues. This would be completed either through a regulatory change under Alberta Legislation and in the meantime we petition Rocky View Council (Council) and the Alberta government to delay their decision on any aggregate mines that are located near the Park until further Indigenous consultation, public engagements and environmental and land use studies transpire. This is particularly important because:

- The project resides within Treaty Number 7 territory, and Stoney Nakota First Nations (SNFN) have Treaty Rights and Traditional Land Rights in the proposed project area. The SNFN Traditional Territory encompasses historic grave sites, trails, campsites, hunting areas, fishing waters, ceremonial and spiritual sites, trade routes, gathering areas, and a buffalo jump. The SNFN requested in a letter to Council on February 11, 2021 that they delay their decision until the community has further time to review this project. I support SNFN's request to be included in the consultation to evaluate the Mountain Ash Project and Rocky View Permit PRDP2021744, a request that was ignored by the proponent and Council. It is the governments obligation to ensure that the Duty to Consult with our First Nations is met – this was overlooked by Rocky View Council at the March 2, 2021 Special Council Meeting.
- An Archeological Study, Traditional Land Use Study and Historical Resource Assessment, was not completed by the proponent. Government must safeguard Indigenous rights and their Traditional Territory; all government agencies must ensure that all-natural resource development projects that have land disturbances do not proceed without comprehending the impact to our First Nation's Traditional Territory.
- The Alberta Environment and Parks officials urged Council to delay their decision until a thorough environmental review could be completed on behalf of Mountain Ash - a suggestion that was blatantly ignored. Dr.

Jon Fennell's studies regarding impacts to the watershed must not be discredited, as further mining in the area will have disastrous impacts to the springs, creek, local wells, water co-op hookups, and will eventually feed into the Bow River. Water, climate change, habitat, and other pertinent environmental effects have not been thoroughly studied. More scientific research is required to understand the impacts of industrial development before proceeding with any of these types of projects.

- The Park is in close proximity to Calgary, Cochrane, and Airdrie, the Park is regularly used by locals, and welcomes 250,000 visitors a year. During the COVID-19 pandemic, Parks became even more valuable to the public. In 2020, the province invested \$1.2 million to make significant upgrades to Park, which are now compromised by proposed gravel extraction.
- Over 95% of local residents do not support Council's decision, and have not been properly consulted with on behalf of the proponent nor Council. Local landowners plan on donating some or all of their land to the province to expand the Park, but will not proceed with doing so if large-scale development ensues.
- There are two species at risk that rely on the park, which were not considered in the Mountain Ash application. Impacts to these species will be devastating if any industrial development occurs near their habitat.
- Small-scale beekeepers are located in close proximity to the Park. These beekeepers play a key role in helping bees to survive and thrive in the Rocky View region - an area where they are already underpopulated. Bees are also critical in the pollination process for local agriculture crops. The Rocky View region's ecosystems without pollinators will be deprived, and gravel pit development has rapid, catastrophic impacts to the already marginal bee population in area.
- Hillstone Aggregates operates a gravel pit next door and the cumulative effects of a second gravel pit have not been studied.
- Highway 567 is an extremely dangerous road that is already unable to manage the current traffic requirements safely. Further upgrades are required to the road before there is any further development. Upgrades must include a wildlife crossing, expanded shoulders on the highway to accommodate bicyclists, left turning lanes on Bearspaw Road and Range Road 35, and a reduction in speed from 100km to 80km.

And lastly — in keeping with Alberta's commitment to Defend Alberta Parks, I do not wish to see any large-scale development within 5km of the Park to preserve the Traditional Territory of Treaty 7, protect the natural environment and to allow for continued public enjoyment of it.

Coleen O'Handey	Ardre, Canada	2021-06-06	"It's a beautiful place and we need great outdoor spaces for families to enjoy."
Janette Egginton	Ardre, Canada	2021-06-06	"This is a beautiful park..Please leave it be..Our family has been going there for 40 years."
Leah Sardachuk	Calgary, Canada	2021-06-06	"I use the Big Horn Springs regularly and find this proposed development offensive. Big Horn Springs recreational area has a rich and significant history, as well as, a beautiful pathway system designed for simple hiking. This area used to be gone to one of Alberta's first creameries. This means entire families can enjoy the area, learn about Alberta and take in the natural tuffa rock formations. It's appalling that this proposed development is being considered, so close to this, very special and historic, natural area. I certainly hope to see ongoing preservation and allow permits for development rescinded."
Andy Genereux	Calgary, Canada	2021-06-06	"This is just a bad idea. A wonderful location to commune with nature 15 minutes from the city. A very bad idea."
Danette Domshy	Ardre, Canada	2021-06-06	"This is a treasured park that provides close access to a lovely hike and break from the busyness and stress of life."
Savana Roy	Calgary, Canada	2021-06-06	"That place holds special memories."
E Ross	Fort McMurray, Canada	2021-06-06	"I grew up in Ardre, and Big Horn Springs Park was one of our family's favourite places to visit. Please stop taking the good getaways from people, we need a place like this now more than ever!"
Hary Barham	Ardre, Canada	2021-06-06	"Save this and!"
Shannon Bruce	Carstairs, Canada	2021-06-06	"Shannon Bruce"
andrea desjardins	Calgary, Canada	2021-06-06	"Such an amazing spot for a family to enjoy nature."
Eleanores	Edmonton, Canada	2021-06-06	"Listen to the majority of people opposed to it for environmental causes. Detriment to environment to continue with this project."
Cor Roesser	Canada	2021-06-06	"This is such a little gem of a place, it's one of my favourite places to spend time."
Aryn Laxton	Beaumont, Canada	2021-06-06	"I love that park! Don't you dare wreck it!!!"

			my family has enjoyed it on numerous occasions. It would be a sad day to see it go."
Kate Pearn	Calgary, Canada	2021 06 09	"A gem of a provincial park. Leave it for our families!"
Susan Raby Dunne	Longview, Alberta, Canada	2021 06 09	"Because it's another dotted, wide area destroying idea of the UCP that needs to be abandoned, along with blowing off mountain tops and poisoning the watershed for fishery co."
Michael Snyder	Edmonton, Canada	2021 06 10	"This is an amazing park that needs to be preserved and protected."
Leah PEARCE	Cochrane, Canada	2021 06 10	"For at least the last 7+ years the residents and constituents of MD Rocky View have participated in consultations with the Municipality, providing the input on the Grave Extract on Plan only to have the plan shelved while the MD approved 5+ potential applications. Application after application approved, on adjacent lands and adjacent to a plot that still has 2 more phases of expansion, resulting in one massive plot and a within proximity to and geographically "upstream" from the Provincial Park and the natural Spring within the Park. An Area Structure Plan is needed for the area surrounding the Park with input from ALL stakeholders to protect the Park, the natural springs, the wildlife, the aquifer, etc. Residents are tired of having to attend hearing after hearing for Grave Potential applications when they already provided feedback in the Grave Extract on Plan as the vision to responsibly development of this natural resource. If only the Grave Potential industry was as heavily regulated as O&G or the Coal mining"
Shirley Drummond	Calgary, Canada	2021 06 10	"This is a beautiful, natural, & popular area, & we appreciate its proximity to south Calgary, for an outing, hike, picnic. Places like this should be protected & valued, An environmental review should be required prior to considering any nearby development."
Angela Grace	Calgary, Canada	2021 06 10	"This is a provincial treasure and deserves to be left alone for our children to enjoy."
Leah PEARCE	Cochrane, Canada	2021 06 10	"Thank you for your continued support!"

Chester Day	Calgary, Canada	2021 06 10	"My late father's trees planted at Bighorn Springs park and I don't wanna see it get torn out of the ground for some grave pit. The park is absolutely gorgeous and home to so much wildlife and natural beauty"
Emily Marston	Wetaskwin, Canada	2021 06 10	"I'm signing because.....carey Albertans do not want a grave pit destroying a site that is so important to nature, biodiversity and families, but the Rocky View Council is caring ignoring the rivers. Just keep proving to the rest of the world you're caring doing what's best for your pockets"
Eddra Coosmo	Monarch, Canada	2021 06 10	"Please save these places as not of folks go adventure outward"
Tiffany Osz	Innisfail, Canada	2021 06 10	"Parks should remain off limits to industry."
sarah sabe	cochrane, Canada	2021 06 10	"There is no shortage of graves in this area. Therefore not necessary to damage an aquifer that feeds into Tufa deposits and a trout bearing creek"
Krista Sebe	Edmonton, Canada	2021 06 11	"This is a special place that is shared by many, and enjoyed by all ages."
Pam Prichard	Bragg Creek, Canada	2021 06 11	"This park is used a lot by Calgaryans and folks from Airdrie and from Cochrane. It is beautiful."
Anne Murphy	Calgary, Alberta, Canada	2021 06 11	"Just stop running all our natural areas!!!"
Elen Gasser	Calgary, Canada	2021 06 11	"Please do not jeopardize this unique natural park and the area adjacent to it. Bighorn Springs is a rare jewel and a wonderful place to plant and breed species and the natural springs. It is significant ecologically and is used extensively by families especially for easy day out with children. Great place for a hike for adults too. I have visited regularly over 40 years now. There are other places to get graves from. Please leave this area alone! Habitat around it needs preserving as a buffer and the peacefulness needs preserving too."
Maggie Ayriss	Airdrie, Canada	2021 06 11	"I love Bighorn Springs Park!"
Kathryn Smith	Airdrie, Canada	2021 06 11	"We go here several times a year. It is close and beautiful, a great escape for our children."
Caroline Hay	Calgary, Canada	2021 06 11	"We love this park and do not want it impacted negatively by a grave pit, which does not belong in a park to begin with."
Bevan Auger	Calgary, Canada	2021 06 11	"No park like this should be closed unless put through full review and public consultation, no one wants this."
Nick Sharpe	Canmor, Canada	2021 06 11	"This is a unique location and beautiful location with important natural diversity and should be left as a provincial park. Developing

Name	Location	Date	Comment
			a grave pit is an unnecessary idea when there are far more locations that have way less impact on nature."
Heleen Johnson	Carstairs, Canada	2021 06 11	"This is a lovely wild park close to Airdrie and Calgary. The province just spent a lot of money upgrading it. That would be a waste."
Leah PEARCE	Cochrane, Canada	2021 06 11	"This Park is such a hidden gem! It is an oasis tucked into a unique landscape. A magical landscape that has deposited a grave bed which acts as the filtration system for a water aquifer that terminates in the Provincial Park. A park which is home to a natural spring that feeds the creek which runs through Cochrane Rancho Park. It is a biodiversity ecosystem that draws wildlife from the surrounding natural lands. There is more at stake here than what the grave industry would lead a layperson to believe. Rural water we rely on this aquifer for the municipal water, many of which have no voice or recourse should the "fossil water" be irreversibly damaged. Alberta Environment and Parks needs to take a serious look at what is happening here now and what is going to happen in the future once the provincial lands are rezoned for aggregate extraction. A lot of these sections of land are adjacent to one another and geologically "upstream" from the Park. People that have a vested interest in the park need to win."
Barbara Gtze	Canada	2021 06 11	"I love visiting the big hills springs, it's a beautiful and peaceful place that is good for my mental health!"
Luana Antz	Airdrie, Canada	2021 06 11	"We need to protect our parks so there is something for future generations to enjoy. I want my daughter to grow up exploring beautiful places like this one."
Dale PALMER	Rocky View No. 44, Canada	2021 06 11	"It is a WAY to close to my home. It puts my water coop at risk I am worried about noise, dust, light pollution and things that affect a provincial park"
Gordon Ross	Calgary, Canada	2021 06 12	"Corrupt council tries to steal a park IMO this should be stopped and have adults review the proposal."
Kelly Smith	Calgary, Canada	2021 06 12	"We must protect Alberta's natural environment. And parks. The impacts of a grave pit go far beyond the footprint of the grave pit."
Darry Roste	Leduc, AB, Canada	2021 06 12	"I want to save the beauty of this park"
Emma Barry	Calgary, Canada	2021 06 12	"I'm signing this petition because The Big Hill Springs Provincial Park's natural environment and habitats at catastrophic risk if grave pit development ensues."
Liam O Mordha	Lethbridge, Canada	2021 06 12	"We have planted a Grove of trees there that are now fairly mature. Each of these trees represent one of our children as the trees were given them from school programs. I appreciate the needs of development but this is such a lovely place in the middle of fairly stark surroundings. Please find a different area for a grave pit."
Susan Wallace	Airdrie, Canada	2021 06 12	"I have been a frequent user of this Park for more than 20 years. It is a very special place and needs to be protected. As a public park it offers wonder, nature, health benefits and enjoyment to the people of Alberta. There are several other grave pits in the area. There is

Name	Location	Date	Comment
			no need to locate one close to a park. It suggests that the Rockyview Council is being significantly influenced by a company rather than protecting the interests of the population."
Trudy Godden	Calgary, Canada	2021 06 13	"Great place for picnics and hiking! Would hate to see this beautiful place turned to industry!"
Tysey MacIntosh	Airdrie, Canada	2021 06 13	"I love that place."
Christy Williams	Cochrane, Canada	2021 06 13	"This is a beautiful park used by many people."
Abbie McCough	Strathmore, Canada	2021 06 13	"Natural Parks are important to preserve and protect."
Lynn Zandean	Airdrie, Canada	2021 06 13	"I grew up going to Big Hills Spring on family outings and now as a mom I take my three daughters. Getting out in the fresh air for our wellness and to connect with family is so important to me and my family."
Christina Ench	Vaudreuil-Dorion, Canada	2021 06 13	"Christina Ench"
Norma Lendrum	Calgary, Canada	2021 06 13	"I am signing to support the 63 residents who did not want this grave plot."
Joanne Robertson More	Calgary, Canada	2021 06 14	"I value Big Hills Springs as a family area. Don't allow grave development to spoil this sensitive area."
Karen Lee	Calgary, Alberta, Canada	2021 06 14	"I am sick of our natural resources being sold"
Emily Drzymala	Calgary, Canada	2021 06 14	"Public parks are not for private profit!"
Perre Nassar	Airdrie, Canada	2021 06 14	"Hopefully we stay cause this our only way to breath during the pandemic."
Ruth Crates	Grande Prairie, Alberta, Canada	2021 06 14	"Destroying a well-used provincial park to benefit a single company is irresponsible. Fish habitat needs protections as well."
Janice Gagnon	Sundre, Canada	2021 06 14	"There's grave everywhere in this MD seems unnecessary to endanger these beautiful hiking trails and natural areas for the benefit of friends of council!"
Gordon Ross	Thornhill, Canada	2021 06 14	"We borrow the future from our kids and Grandsons."
Maxine Henry	Carstairs, Canada	2021 06 14	"Big Hills Springs is a natural occurring, beautiful space that is close enough to 2 cities to be used by families that cannot afford or have time to travel to another location. Destroying this unique spot for something as mundane as a grave plot is a travesty!"
Kim Shaffer	Airdrie, Canada	2021 06 14	"We have loved this park for many years! I can't believe the money is more important than the beauty of our little parks!"
Ryan Walker	Lethbridge, Canada	2021 06 14	"We need to keep our parks for public use and wildlife."

Noel Kovatch	Stony Plain, Canada	2021 06 25	"I love Alberta Parks more than anything else in the world"
Monique Rogee	Calgary, Canada	2021 06 25	"Please respect the natural area around the provincial park and protect the water supply into Bowhead Springs."
Carla Roosen	Calgary, Canada	2021 06 25	"This is the first that I've heard of this. How could this even be considered? We already have a responsibility to protect the environment. These springs are important and help sustain various species. They would be destroyed by such an endeavour. It's a small pocket of natural beauty and provides so much to so many. Surely there are other possible sites in Rocky View Country for a gravel pit that would have no where such environmental impacts. We are all stewards of the land, which comes with great responsibility, especially when one sits on a council making decisions that have long term consequences and repercussions."
Marlene Johnsruide	Nanaimo, Canada	2021 06 25	"Bowhead Springs is one of Alberta's treasures, as well as a valuable asset to farmers and the environment and needs to be protected. Something matters more than money!"

UTILITY SERVICES

TO:	Council		
DATE:	July 13, 2021	DIVISION:	All
FILE:	N/A	APPLICATION:	N/A
SUBJECT:	Waste to Energy (WtE) Solutions Report		

POLICY DIRECTION:

On March 23, 2021 at a regular meeting of Council, Administration was directed to bring back a report on waste to energy solutions, including technologies, regional markets and economic cost/benefits to Council by end of July 2021.

EXECUTIVE SUMMARY:

Waste to energy (WtE) technologies that treat municipal solid waste (MSW) can be categorized as proven technologies, including mass burn combustion and refuse derived fuel (RDF), or emerging technologies such as pyrolysis, gasification and plasma arc gasification. WtE, also referred to as recovery, fits into the waste management hierarchy just below recycling and just above landfilling.

Rocky View County manages about 8,000 tonnes of materials per year through the transfer sites. Of this total only a fraction, less than half, would be suitable for WtE treatment. Most proven technologies require 100,000 tonnes per year to be viable. The County would need to greatly increase the amount of waste managed or be part of a regional solution to pursue WtE at this time. These realities limit WtE applications for the County, but consideration could be given to monitoring opportunities for the following:

- attracting proponents in the WtE industry to a site within the County;
- forming partnerships with large scale commercial waste producers and/or energy users to find workable technology solutions for specific situations;
- joining established regional coalitions to compile amounts of waste required for economies of scale for proven technologies; and/or
- hosting a facility (pilot or permanent, micro, small or larger scale).

In alignment with the 2021 Solid Waste Servicing Strategy, Administration will remain current on WtE options and their costs and pursue innovative solutions as they arise.

ADMINISTRATION RECOMMENDATION:

Administration recommends Option #1.

BACKGROUND:

In March 2021, Council directed Administration to bring back a report, on waste to energy technology solutions, costs and benefits, and the regional context to supplement their knowledge on the topic. Sonnevera International Corporation was contracted to prepare this report. Their full report is found in Attachment 'A'.

Administration Resources
Jennifer Koole, Utility Services

Technology Solutions Overview

Waste to energy is a term that is used to categorize a wide range of technologies that in some way, either directly or indirectly, convert waste materials into heat or fuel. The most common types of WtE technologies include mass burn incineration, gasification, pyrolysis, anaerobic digestion, and refuse derived fuel (RDF). Of these, only incineration uses the waste material as fuel, and it is the only type proven on a large scale.

The primary goal of WtE is to provide an alternative to landfilling. This is done in order to save landfill space or prolong a landfill's life. The energy recovery component, while a bonus, is secondary. The physical reduction of waste, with the conversion to energy, is usually between 75 per cent by weight and 90 per cent by volume. The remaining 10 to 25 percent ash, char, or slag still needs to be landfilled.

Cost/Benefit

The estimated cost to implement a WtE facility is between \$100-500 million in capital investment, with operating costs up to \$15 million per year, with a facility requiring at least 100,000 tonnes per year of waste to be cost effective and technically feasible. Operating costs are reduced with increased feedstock as the greater throughput creates system efficiencies. Investing in waste reduction and diversion programming in order to reduce waste to landfill volumes is almost always an economically preferred option compared to the capital and operating costs of a WtE facility.

Conditions that make WtE solutions more viable include factors such as a lack of or decreasing amount of available landfill space (existing or future), a large distance between source of waste and treatment options, or high landfill cost per tonne. WtE is also more economically attractive when there is a high price for the sale of energy, a specific demand for alternative energy sources, a strong and consistent market for any derived fuels to be used for energy or feedstocks (e.g. plastics), or a strategic use for a decentralized heat or energy source. In some jurisdictions, carbon credits can be earned and sold for energy produced from WtE facilities. These factors are all dependent on the location of the facility and the state of the energy market at the time. Most of these conditions are currently not favourable in Alberta; thus, most municipalities rely on landfilling the materials that cannot otherwise be recycled or composted.

Regional Markets

Canada: In Canada there are seven (7) large scale WtE facilities in operation with most treating greater than 100,000 tonnes per year of pre-screened, pre-treated waste. In general, these facilities are a part of an integrated waste management system built for populations of greater than 1 million people where landfill availability is constrained.

Alberta: A scan of current state WtE facilities in Alberta yielded the table provided in Attachment 'B'. One gasification plant, in Edmonton, that uses gasification to convert non-divertible waste to biofuels has successfully grown from bench-scale to pilot-scale over the past ten years and is building towards a commercial level. Other technologies are being tested in more remote communities where transportation of recyclables are challenging and landfill space is a premium. For example, a Biomass Energy Techniques unit is being piloted in the Peace Region. Sylvan Lake is considering a pyrolysis technology as a part of their "No Landfill Disposal Facility" pledge to their community. A few other, small scale, biomass (e.g. furnaces) are being used to treat waste wood for heating landfill facilities. One larger scale project in the province includes the Southern Alberta Energy from Waste

Association, where more than 60 municipalities are committed to researching and implementing a WtE facility.

Rocky View County: Goals 1 and 2 in the recently approved Solid Waste Servicing Strategy state that all residential and ICI (industrial, commercial, and institutional) waste produced in the County be managed to the 3R's hierarchy. This includes the preference that energy is recovered from waste instead of landfill disposal.

At present, Rocky View County has limited ability to pursue WtE because disposal services are out sourced and there are no commercial WtE options in the province accepting waste for treatment. In addition, relatively small amounts of waste are produced in the County and they are geographically dispersed. This makes even small scale options, if they were proven, difficult to implement.

BUDGET IMPLICATIONS:

This report is for information only and provides no implications on the 2021 budget.

STRATEGIC OBJECTIVES:

This report supports the Council approved 2021 Solid Waste Servicing Strategy.

OPTIONS:

Option #1: THAT the Waste to Energy (WtE) Solutions report be received as information.

Option #2: THAT alternative direction be provided.

Respectfully submitted,

Concurrence,

"Byron Riemann"

"Kent Robinson"

Executive Director
Operations

Acting Chief Administrative Officer

1 Introduction to Waste to Energy

When efforts to reduce, reuse, recycle and compost have been exhausted, waste-to-energy (WtE) technology offers a final opportunity to recover energy from residual waste before waste is deposited in a landfill. WtE fits into the waste management hierarchy as shown below, with WtE falling into the “recover” category:

Figure 1: Waste Management Hierarchy (RCA)

The hierarchy implies the imperative of maximizing the 3Rs (reduction, reuse, recycling) before recovery is employed. This approach is based on research that validates the decreased negative environmental impacts of reuse and recycling compared to recovery and landfill.

This prioritization is consistent with RVC's goals outlined in the 2021 Servicing Strategy, stating residential and ICI (industrial, commercial, institutional) waste will be managed in accordance with the 3Rs Hierarchy. The strategy also shows a desire to promote WtE as the go to for waste disposal and liaise with regional partners on WtE updates and opportunities.

As RVC does not own any disposal infrastructure, instead contracting out disposal services, it has limited ability to incorporate WtE within its waste management system, particularly since no viable WtE options currently are available in Alberta.

2 WtE Technology Solutions Overview

Any materials that contain carbon atoms (i.e., materials that are not a metal, mineral or water) have value as an energy source. This means that materials ranging from plastics, to paper, to food scraps, and yard waste all contain energy which can be captured and used for a wide range of energy applications.

There are a variety of terms that are used to describe groups of processes that convert waste materials as fuel sources to produce energy. These descriptors include waste-to-energy (WtE), energy from waste (EfW), thermal treatment (TT), waste conversion technologies (WCT) or advanced thermal treatment (ATT).

sonnevera international corp.

Technologies offer different ways of utilizing the energy in waste materials. Conventional WtE systems are essentially power plants using waste as fuel instead of natural gas, coal, oil or biomass (e.g., wood). However, the evolution of WtE has shifted somewhat from the traditional combustion of waste to alternative technologies that output synthetic gases, chemicals and liquid fuels. These emerging and developing technologies are progressing towards commercialization, but lack the operating record in North America to be commercially viable.

With any of the technologies, a fraction of the total waste stream will not be suitable for processing by WtE technologies, and will still require landfilling. It is expected that a landfill will still be required, both for unsuitable waste fractions, as well as for residuals generated by the WtE facility. Waste reduction to landfill in the best case would be 75 per cent by weight and 90 per cent by volume.

It is important to remember that WtE's primary goal is to process waste. The energy component, while a bonus, is secondary.

GLOBAL CONTEXT: There are 86 commercialized processing technology WtE facilities, across 25 states, in the United States of America, according to the EPA, and many others operating throughout the world. In many instances, smaller U.S. facilities struggle to remain economically competitive with cheaper landfill disposal options. Many of these smaller facilities have had to be retrofitted with air emission controls in the last two decades, which has significantly increased overall costs.

The categories of WtE technology solutions are summarized in the following table, with more detailed descriptions following.

	Brief Description	Advantages / Disadvantages
Mass-Burn Incineration (combustion)	Waste directly combusted	Technical: <ul style="list-style-type: none"> • Proven technology • Requires large feedstock amounts Environmental: <ul style="list-style-type: none"> • Capability to comply with air, water, and waste emission standards • Volume reduction up to 85-95% Economic: <ul style="list-style-type: none"> • Most efficient WtE technology if feedstock volumes high enough • Normally lower cost per tonne than thermal conversion technologies such as pyrolysis and gasification

	Brief Description	Advantages / Disadvantages
Pyrolysis	Thermal decomposition of carbon-based materials using an indirect source of heat to produce syngas that can be used as a fuel	Technical: <ul style="list-style-type: none"> • Emerging technology • Can produce high-quality by-products with a homogeneous feedstock Environmental: <ul style="list-style-type: none"> • Capability to comply with air, water, and waste emission standards • 15 to 20 percent by weight of feedstock throughput becomes char/ash • Char/ash may require disposal in a hazardous waste landfill Economic: <ul style="list-style-type: none"> • Operating cost higher than mass-burn • Not considered as commercially efficient as standard combustion
Gasification	Thermal conversion of carbon-based materials using a limited amount of air or oxygen to produce syngas that can be used as a combustible fuel or for the downstream production of chemicals	Technical: <ul style="list-style-type: none"> • Emerging technology • Long history with homogenous feedstocks such as coal and biomass • Use with MSW not proven Environmental: <ul style="list-style-type: none"> • Capability to comply with a wide range of emission standards • Typically lower air emissions than mass-burn facilities • Produces slag or ash - 15 to 20% of original feedstock • Slag non-leachable so can be landfilled Economic: <ul style="list-style-type: none"> • Operating cost higher than mass-burn

sonnevera international corp.

	Brief Description	Advantages / Disadvantages
Plasma Arc Gasification	Uses an electrical discharge to heat a gas to high temperatures to be used to thermally convert carbon-based feedstocks to syngas	Technical: <ul style="list-style-type: none"> Emerging technology Pre-processing of waste materials important to create a consistent feedstock; potential to convert MSW to electricity more efficiently than conventional pyrolysis and gasification systems Environmental: <ul style="list-style-type: none"> Capability to comply with a wide range of emission standards Produces slag or ash - 15 to 20% of original feedstock Economic: <ul style="list-style-type: none"> Due to the state of development of this technology, it is still considered to be technically and financially risky
Refuse Derived Fuel	Waste is processed into a consistent feedstock (fluff, bricks, pellets) that improves combustibility	Technical: <ul style="list-style-type: none"> Proven technology Creates a fuel that can be combusted in smaller-scale WtE units (e.g., furnace). Involves pre-processing to enhance the heating value of the MSW More appropriate choice for smaller communities Consistent feedstock improves combustibility Environmental: <ul style="list-style-type: none"> Pollution controls are a necessary part of the combustion system as the RDF will produce both ash (which typically can be landfilled) and fly ash (which may require a secure landfill) Emissions occur at end-use facility Economic: <ul style="list-style-type: none"> Can make economic sense where long-term markets of RDF can be secured (e.g., waste wood)
Catalytic thermal depolymerization	Breaks down long-chain plastics and other organics at fairly low temperatures into a mix of hydrocarbon oils and gases that are distilled at much higher temperatures to separate them into purer product streams, such as diesel	Technical: <ul style="list-style-type: none"> Emerging technology Yet to be locally proven for MSW at a large scale

	Brief Description	Advantages / Disadvantages
Anaerobic Digestion	Biological process that utilizes bacteria to convert the compostable organic fraction of biomass in the absence of oxygen to biogas	Technical: <ul style="list-style-type: none"> • More applicable for the treatment of food waste, Animal manures and biosolids • Not well proven for MSW at a commercial scale
Biomass combustion	Burns biomass/wood waste to produce heat that can then be used to generate steam in a boiler and/or electricity in a steam turbine generator	Technical: <ul style="list-style-type: none"> • Not proven for MSW at a commercial scale

2.1 Mass-Burn Incineration

The most prevalent technology used for WtE is mass-burn incineration. In this technology, raw unprocessed MSW is fed into a boiler, where it is directly combusted in an oxygen-rich environment, typically at temperatures of 700°C to 1,350°C, producing an exhaust gas composed primarily of CO₂ and water, with inorganic materials converted to bottom ash and fly ash. The hot exhaust gases flow through a boiler, producing steam which drives a steam turbine-generator, generating electricity that can be used onsite or sold offsite for industrial use. District heating options are also an option with incineration WtE technologies. The cooled exhaust gases flow through an emission control system. The amount of char/ash produced (likely requiring landfill disposal) will be approximately 15 to 20 percent by weight of the fuel input. Ash can contain hazardous materials and is often disposed of in specific landfills or hazardous waste treatment plants as necessary.

CANADIAN CONTEXT: There are currently four large-scale (>100,000 tonnes annually) mass burn incineration facilities operating in Canada. The facilities are located in Quebec City, QC; Burnaby, BC; Brampton, ON; and the Regions of Durham/York, ON.

REGIONAL CONTEXT: A variation of mass burn technology is controlled air combustion, using two or three stages where air and fuel are added. This technology was installed and operated in Wainwright, Alberta for over 20 years, primarily to burn biomedical waste, although it did also burn municipal waste. The facility was closed in 2015 due to the cost required to bring it up to emission standards. This experience confirms that the recovery of energy from municipal waste is technically achievable, but is not financially feasible at the scale of the waste volumes communities the size of Wainwright generate without supplementary revenues.

ECONOMIC IMPLICATIONS: Studies have shown that mass-burn incineration normally has a lower cost per tonne than thermal conversion technologies such as pyrolysis and gasification. However, based on cost curves from existing facilities in other jurisdictions, it can be expected that the net cost of treating waste using conventional combustion, after revenues from the sale of energy, would be considerably higher than the cost of landfill.

2.2 Thermal Conversion Technologies

Thermal conversion technologies convert the carbon content of the MSW into a synthesis gas (syngas), which can then be used to produce liquid fuels, chemicals or fertilizers, or can be combusted to generate electricity. Thermal conversion technologies work best when using homogeneous, low-moisture, high heating value feedstocks with low inorganic portions (ash and moisture). Therefore, many thermal conversion technologies require (or benefit from) up-front pre-processing to remove metals, glass, and construction debris.

sonnevera international corp.

GLOBAL CONTEXT: While thermal conversion technologies have a long history with feedstocks such as coal, petroleum coke, and biomass, their use with MSW is still somewhat limited worldwide. However, there are many suppliers of pyrolysis and gasification technologies that state that they can process MSW. At the same time, only a handful have real commercial-scale operating experience. Many potential suppliers have basic or conceptual designs, or only bench scale experience with their technologies. While these emerging technologies may warrant further evaluation in the future, real-world operational experience is necessary to increase the opportunities for the technical and financial success of a technology that would be considered for treating a MSW stream.

ECONOMIC IMPLICATIONS: The conclusion on emerging technologies (pyrolysis, gasification, plasma arc gasification) is that they hold promise for the future, but carry a technology risk and come with a price tag that is even higher than conventional mass-burn incineration technologies.

2.2.1 Pyrolysis

Pyrolysis can be simply defined as the thermal decomposition of carbon-based materials using an indirect source of heat to produce a synthesis gas (syngas). Basically, the organic materials are “cooked” in an oven, at temperatures of 400 to 900°C, with no air or oxygen present. The feedstock is not burned directly during the process; instead the bonds between the compounds are “cracked”, breaking larger molecules into smaller ones including hydrogen and hydrocarbon gases (such as methane and carbon dioxide) and liquids (water).

The main constituents of syngas produced by pyrolysis are carbon monoxide (CO), hydrogen (H₂), and methane (CH₄), all of which are combustible gases. Pyrolysis systems also produce oxidized compounds (carbon dioxide [CO₂] and water [H₂O]), which have no heating value and dilute the syngas. Pyrolysis typically results in a large unreacted portion of the feedstock remaining in the form of carbon char that requires disposal.

If a homogeneous feedstock is processed by pyrolysis, it can produce high-quality by-products. However, MSW is not a homogenous waste stream. As the makeup of MSW is not consistent, it must be pre-treated to create a feedstock with as predictable an energy value as possible. Pre-processing may include sorting, separation, size reduction, densification and drying. The ideal feedstock has a moisture content of less than 25 per cent. Most waste streams with a high content of organic materials, such as food and yard waste, will be well over 25 per cent moisture.

The syngas can be utilized to heat boilers for electricity or steam, or cooled and cleaned for reciprocating engines or turbines for power generation. Overall, pyrolysis technologies have the capability to comply with a wide range of air, water, and waste emission standards, although the char/ash may require disposal in a hazardous waste landfill. The amount of char/ash produced will be approximately 15 to 20 percent by weight of the feedstock throughput.

GLOBAL CONTEXT: Pyrolysis has been used to thermally treat MSW for over 25 years at a few facilities worldwide, mainly in Europe and Japan.

REGIONAL CONTEXT: Most organic compounds can be broken down to basic components using the pyrolysis process. As a result, many experimental and pilot plant programs have been done using pyrolysis to process products such as animal offal, used tires, agricultural field residue, and manure. Commercial pyrolysis units are typically used for smaller applications as they can be used in modular installations.

ECONOMIC IMPLICATIONS: Commercially, when compared to combustion, pyrolysis is not considered as efficient as standard combustion.

2.2.2 Gasification

Conventional gasification can be defined as the thermal conversion of carbon-based materials using a limited amount of air or oxygen to produce syngas that can be used as a combustible fuel or for the downstream production of chemicals. As with pyrolysis, no direct burning of the feedstock takes place.

Unlike pyrolysis, that uses an indirect heat source, gasification requires a direct heat source. In the gasifier, the addition of air or oxygen for gasification of the feedstock results in partial oxidation of a small portion of the feedstock, forming some CO₂ and releasing heat to begin to thermally degrade the organic compounds in the feedstock, forming pyrolysis gases, oils, liquids, and char. These products react with limited amounts of air, oxygen, and/or steam, that are injected to initiate the gasification reactions to produce the desired syngas, which is composed primarily of CO and H₂.

GLOBAL CONTEXT: The use of commercial gasification technologies to treat MSW began in the 1980s in the U.S., Europe, and Japan. In these initial units, the use of unprocessed, heterogeneous, MSW resulted in many technical problems. Many of these facilities were shut down for technical and/or economic reasons. There are many operating MSW gasification facilities worldwide, mostly in Europe and Asia primarily using blends of MSW and other feedstocks such as sewage sludge and industrial wastes.

REGIONAL CONTEXT: The most current example of gasification is Enerkem's MSW gasification to alcohols facility in Edmonton.

Based on a wide range of commercial experience, a minimum throughput for gasification is about 60 tonnes/day (18,600 tonnes/year). This compares to estimated total waste disposal amounts for RVC of 27,000 tonnes/year, although this includes all sectors and fractions that are not suitable for gasification. The higher the throughput level, the lower the cost per tonne for gasification facilities.

The general conclusion is that gasification is not feasible for regions with smaller population at the current state of technology due to the small feedstock throughput rates and the lack of reference gasification facilities and gasification technology suppliers in North America. Furthermore, although these technologies show promise for a higher recovery of energy than conventional mass-burn incineration systems, they are also substantially more costly to build and operate, therefore offering little net benefit.

ECONOMIC IMPLICATIONS: Due to the heterogeneous nature of MSW, significant pre-processing is often required. While some MSW gasification technology suppliers state that they can operate with little or no pre-processing, most include manual picking for large items like appliances. This may be followed by primary and secondary systems to remove glass and metals and reduce the feedstock size. To increase efficiency, many systems also incorporate drying to 10 to 20 percent moisture content. Depending on the technology supplier, typically about one third of the raw MSW stream (including recyclables and moisture) is removed prior to being fed into the gasifier. Therefore, post-diversion MSW provides better feedstock than raw MSW due to the removal of metals and glass.

Waste materials with high moisture content such as food and yard waste are not good candidates for using gasification technology. As stated previously, gasification reactions require external heat to start the process. Once the thermal reaction process has stabilized the syngas may be used as the source of heat. The higher the heat value of the feedstock the more likely the process will be self-sufficient. Startups and shutdowns usually result in inefficient gasification and will require the use of more supplemental fuel and potentially create more contaminants to be removed.

The benefits of gasification are considered to be increased efficiency, greater variety of end products, and fewer back-end pollution control requirements. Commercially, gasification has not achieved as high a level of acceptance as traditional combustion because of its relative high complexity and capital costs. This technology is best suited to processing pre-shredded medium to high energy material. This technology is more complex and more expensive than other thermo-chemical technologies, and has limited commercial viability and is not proven at a full scale.

2.2.2.1 Plasma Arc Gasification

Plasma technology is a subset of gasification that uses an electrical discharge to heat a gas, typically air, oxygen, nitrogen, hydrogen, argon, or a combination of these gases, to temperatures above 3,800°C. The hot ionized gas, or plasma, can then be used to thermally convert organic feedstocks to syngas and a non-hazardous glassy slag.

Like other thermal treatment options, pre-processing of the waste materials before plasma arc gasification is important to create a consistent feedstock. The feedstock then comes into contact with the plasma, in an atmosphere that is controlled for air or oxygen, to create a gasification reaction. The extreme temperatures allow for (waste) materials to be deconstructed down to their elemental gaseous forms. Plasma arc gasification usually occurs in a closed, pressurized reactor and depending on the feedstock the materials are either gasified to create a syngas or melted (in the case of non-carbon based materials) creating an inert slag. The use of the resulting syngas is similar to a conventional gasification system.

GLOBAL CONTEXT: Plasma arcs have been used for years to treat hazardous or medical wastes and incinerator ash, converting them to a non-hazardous, glassy slag. While application to MSW is still new, it has great potential to convert MSW to electricity more efficiently than conventional pyrolysis and gasification systems due to its high heat density, high temperature, almost complete conversion of carbon-based materials to syngas, and conversion of inorganic materials to a glassy, non-hazardous slag. The amount of char/ash produced (potentially requiring landfill disposal) will be approximately 15 to 20 percent by weight of the feedstock throughput.

REGIONAL CONTEXT: The Red Deer Central Waste Management Commission had partnered with Plasco in 2012 to develop a plasma arc gasification facility in central Alberta, but ultimately decided it could not guarantee enough garbage to feed the proposed 200 tonnes per day (73,000 tonnes per year) plant that was to use plasma technology to convert garbage into a syngas that could be used to generate electricity.

ECONOMIC IMPLICATIONS: As with conventional gasification, the larger the system, the better the economics on a per-tonne basis. Turndown is difficult with this technology, and plasma arc control of the gasification process becomes less efficient during start ups and shutdowns, when throughput is decreased. With only a few commercial-scale plants in service, much has still to be learned about the operating profile of this technology. Due to the state of development of this technology, it is still considered to be financially risky.

2.3 Refuse Derived Fuel (RDF)

A third WtE technology option is to make refuse derived fuel (RDF), in the form of fluff, bricks or pellets, from MSW in order to recover the energy.

The RDF produced creates a consistent feedstock which, in turn, improves combustibility for the end user. The users of RDF are often larger facilities such as mass-burn incinerators, cement kilns, coal fired power plants, or industrial boilers that are looking for a supplementary alternate fuel to coal, oil, or gas. The actual processing or making of RDF can take place in smaller communities with lower waste volumes and equipment can be sized appropriately.

As with mass-burn technology, pre-processing of waste is expected to remove all non-combustible and bulky materials. RDF is often a favoured technology because it can produce a fuel with a higher heating value than unprocessed feedstocks and produces less ash at the end of the thermal process than mass-burn facilities. It is possible for the MSW feedstock to be stored for longer periods of time and to be co-fired with other feedstocks such as wood, coal oil or natural gas.

REGIONAL CONTEXT: RDF technologies could be a more appropriate choice for smaller communities, since the most expensive part of the WtE process, namely the combustion, heat recovery and air emission controls, may be handled by an off-site user of the RDF. A couple of companies have been trying to establish RDF facilities in Alberta communities (e.g., Drayton Valley) for several years.

ECONOMIC IMPLICATIONS: An important consideration and pre-requisite for the establishment of a financially viable RDF facility is that long-term markets for the RDF product need to be secured. These markets will then determine the quantity and quality of product that is required, and the equipment can be specified accordingly. It is important that the business case includes a long-term supply of waste as feedstock, a long-term contract for the sale of RDF product, and vendor guarantees of product quality and equipment reliability.

2.4 Catalytic Thermal Depolymerization

This process breaks down the long-chain plastics and other organics, at relatively low temperatures (250°C) into a mix of hydrocarbon oils and gases, with methane and CO₂ also being produced. The oils are then distilled at much higher temperatures to separate them into purer product streams (e.g., diesel).

This is all done at much lower temperatures than any of the thermal treatment technologies like mass-burn incineration, pyrolysis and gasification. It is still a form of WtE converting solids into liquids. It is yet to be locally proven at a large scale.

2.5 Biological WtE

Anaerobic digestion (AD) is an effective biological process that utilizes bacteria to convert the compostable organic fraction of biomass in the absence of oxygen to biogas. The biogas is a mixture of methane (CH₄), carbon dioxide (CO₂), water, and other impurities. Biogas has a medium heat value gas suitable for use as a fuel.

GLOBAL/CANADIAN/REGIONAL CONTEXT: AD is a common conversion or WtE technology used for the organic fraction of MSW, agricultural waste, and wastewater treatment.

ECONOMIC IMPLICATIONS: AD is more applicable for the treatment of food waste and wastewater treatment plant sludge and biosolids. There have been few MSW-based AD technologies, leaving it not well-proven at a commercial scale.

2.6 Biomass Combustion

Biomass combustion technology or “advanced burner” burns biomass/wood waste to produce heat that can then be used to generate steam in a boiler and/or electricity in a steam turbine generator.

REGIONAL CONTEXT: This technology is well proven for biomass feedstock (e.g., wood) at locations such as the Francis Cooke Regional Landfill, where waste wood is used to heat buildings at the facility, and Eco-Growth Environmental who dehydrate organic waste for boiler fuel in facilities in the Calgary region.

Some companies are attempting to branch out to co-fire biomass burners incorporating plastics and paper/cardboard, or even MSW, such as the pilot facility in the Peace Region, but this approach is not proven at a commercial scale.

sonnevera international corp.

3 Economic Cost and Benefits

A detailed financial evaluation of operating a WtE facility is recommended to determine the true cost per tonne of any proposed system, which includes costs for hauling, ongoing landfill operations, facility capital costs, facility operations and maintenance costs, changes to waste collection and hauling, associated waste sorting, and pre-processing requirements.

Research into Canadian WtE facilities estimates capital costs may range between \$100 million and \$500 million, depending on facility size and technology chosen. Operating costs are also reliant on size and technology but could reach up to \$15 million per year. Construction of a pre-treatment facility is often also required and can add an additional estimated \$40 million to the project cost.

Capital and operating costs based on capacity are shown in the graphs below:

Source: Ramboll through Fichtner (developed for York – Durham)

The various sources of costing information have led to the following cost ranges for WtE technologies:

Costs (\$/tonne):

Pyrolysis	Gasification	Mass Burn
Capital: \$800 to \$1000 per annual design tonne Operating: \$50 to \$110 per tonne	Capital: \$900 to \$1500 per annual design tonne Operating: \$80 to \$150 per tonne	Capital: \$900 to \$1200 per annual design tonne Operating: \$80 to \$130 per tonne

REGIONAL CONTEXT: The City of Calgary stated in a 2018 report to Council that, as WtE remains a higher cost approach to managing residual waste than landfill, and is not required to reach The City of Calgary's 70 per cent by 2025 waste diversion goal, the earliest estimated timeframe for the introduction of WtE technologies for the treatment of waste by The City is beyond 2025.

Considering costs associated with most WtE facilities, the cost of generating electricity can often be higher than current sources. This would especially be the case in places with relatively inexpensive electricity costs, such as Alberta.

Operating costs reduce with increased tonnages of feedstock as increased throughput creates system efficiencies. Yet, in most cases, research shows that maximizing waste reduction diversion programming, resulting in decreased landfilling, is less costly than the capital and operating costs of a WtE facility (if landfill capacity is available).

4 Environmental impacts

GLOBAL CONTEXT: Air emission standards for WtE facilities are very stringent. In Europe, with much more WtE application than North America, air emissions from WtE are considered minimal compared to industry and transportation.

WtE facilities also generate solid residues that require treatment/disposal. Bottom ash (or slag) is generally safe to dispose in landfill or use as landfill cover. Fly ash (representing ~ 5%) can be toxic, and needs to be stabilized before landfilling.

At the same time, an Imperial College (UK) study (2013) concluded that the modeled PM10 impacts of both facilities were "extremely low", in fact so low that it would not be possible to validate the modeling because the concentrations are below the limit of detection for ambient air measurements. *The authors focused on two WtE plants in the UK*

[Long-term monitoring of dioxins and furans](#) near a municipal solid waste incinerator near Tarragona, Spain showed that the facility "... does not produce additional health risks for the population living nearby.

CANADIAN CONTEXT: Conclusions from [Durham's Extensive Human Health and Ecological Risk Assessments](#) (published in 2013) include:

Extensive human health and ecological risk assessments (HHRA and ERA, respectively) were undertaken. Overall, the results of this ERA indicated that chemical emissions from the proposed EFW facility would not lead to any unacceptable risks to ecological receptors in the local risk assessment study area under either the initial operating design capacity of 140,000 tonnes per year or the maximum design capacity of 400,000 tonnes per year.

sonnevera international corp.

GHG emissions associated with WtE are outlined in the figure below:

Source: Fichtner, 2019

As shown, WtE has slightly higher CO₂ emissions than natural gas, but much lower than coal generation.

5 Summary

WtE technologies that treat MSW can be categorized as proven technologies, including mass-burn waste-to-energy and refuse-derived-fuel, or emerging technologies such as pyrolysis, gasification and plasma arc gasification.

However, the evolution of WtE has shifted somewhat from the traditional mass burn incineration of waste to alternative technologies that output synthetic gases, chemicals and liquid fuels.

WtE does not negate the need for landfill. Reduced landfill in the best case would be 75 per cent by weight and 90 per cent by volume.

RVC has limited ability to utilize WtE since it contracts out disposal services, and no commercially viable WtE options are currently available. In addition, RVC generates relatively small amounts of waste that are regionally dispersed. These realities limit WtE opportunities for RVC, but it could consider:

- offering to host a facility (pilot or permanent; micro, small or larger scale),
- attract WtE development in the jurisdiction,
- form partnerships with large commercial waste producers and energy users in technology solutions, and/or
- work with regional partners to compile amounts of waste required for economies of scale. For example, joining the Southern Alberta Energy from Waste Association, a 60-member municipal coalition exploring WtE options.

Finding a suitable location for a WtE facility would likely be challenging, considering stringent permitting requirements and potential stakeholder opposition to the operation of a WtE facility (as in the case of Beisker where a biomedical waste incinerator was rejected). This is the case despite the reality that modern WtE facilities easily meet emission standards.

The estimated cost to implement a WtE facility is between \$100-500 million in capital investment, with operating costs that could reach up to \$15 million per year, and would require a guaranteed volume of waste. Operating costs reduce with increased tonnages of feedstock as increased throughput creates system efficiencies. Yet, in most cases, research shows that maximizing waste reduction diversion programming, resulting in decreased landfilling, is less costly than the capital and operating costs of a WtE facility.

MD of Bonnyville	Biomass combustion	Biomass Energy Techniques (BET)	2020	Contracted a feasibility study for the BET technology, which was completed by Morrison Hershfield. The study concluded that the technology is unproven for MSW and that conditions are not favourable economically or technically at this point. If MD Bonnyville still wishes to proceed they should determine the trigger points and work with neighbouring municipalities to solidify feedstock.	
Exshaw	Biomass combustion	Bow Valley Waste Commission	2018	Biomass burner Installed at Francis Cooke Regional Landfill three years ago. Used to heat the Administration and Maintenance buildings through concrete floor slabs, which also help to absorb heat in the summer months. Capital cost ~ \$100k, and a year of adjustments to get it tuned for the mountain environment. Feedstock (~100 tonnes/year) is waste wood delivered to the landfill which is ground into wood chips.	https://www.motoday.com/local-news/green-solutions-take-shape-at-francis-cooke-regional-landfill-1570976
Calgary Region	Biomass combustion	Eco-Growth Environmental	2017	The process turns waste into a dehydrated biomass, shrinking its volume by around 80 per cent. A boiler is fueled by the biomass, burning at around 8600 to 9000 British Thermal Units per pound — higher than the typical 7000 BTUs of wood.	Eco-Growth Environmental Inc.
Edmonton	Gasification	Enerkem	2014	Edmonton's Waste to Biofuels and Chemicals Facility is the world's first commercial-scale waste-to-biofuels facility of its kind and is designed to turn household garbage into biofuels and renewable chemicals. The facility is built, owned and operated by Enerkem Alberta Biofuels, a subsidiary of Enerkem. Using Enerkem's proprietary technology, it aims to convert 100,000 tonnes of municipal solid waste into 38 million litres of biofuel annually to help Alberta reduce its greenhouse gas (GHG) emissions. After initially producing just methanol, the facility has installed new process to produce ethanol in 2017. Not currently seeking outside feedstock.	Waste to Biofuels and Chemicals Facility :: City of Edmonton
Grand Prairie	Landfill gas	Aquatera	2021	Aquatera Utilities Inc. is the leading provider of water, wastewater, and solid waste services in the Grande Prairie region. Through their Landfill Gas-to-Energy Project, Aquatera captures naturally occurring methane gas and converts it into energy which provides heat and electricity for their Water and Wastewater Treatment Plants. Aquatera monetizes their Landfill Gas-to-Energy Project through the sale of excess power to the Alberta energy grid, and through the generation of carbon credits which are available for purchase to high carbon emitters to offset their emissions, making it a net positive operation. Within the next five years, Aquatera is considering investment in pyrolysis technology to treat municipal solid waste (MSW), specifically plastics.	Plant that would produce fuel out of garbage may come to Grande Prairie EverythingGP
High River/Aldersyde	Catalytic thermal depolymerization	Cielo	2019	Process - catalytic thermal depolymerization. From website: We have developed a proven and patented technology in conjunction with a related party, which will produce a high cetane, ultralow sulfur renewable diesel, kerosene and naphtha fuels. Feedstock for the facility is the world's most available and inexpensive feedstock of household, commercial and construction/demolition garbage, including feedstocks of Municipal Solid Waste ("MSW") and cellulosic materials such as wet organics (compost), all plastics, paper, tires, cardboard, sawdust and wood. Cielo has an exclusive global license from a related party for a game-changing refining process that can convert multiple different waste streams into renewable diesel at a considerably lower cost than biodiesel companies.	Corbella: Alberta company turns trash into diesel with new technology Calgary Herald
Peace Region Waste Management Company	Biomass combustion	BET (Biomass Energy Techniques)	2021	The Waste Commission is running a pilot project for BET. The technology has been successful with wood waste but the Peace Region is testing with MSW – including cardboard and plastics. Pilot uses 8 Tonnes/day. The gasification system heats one boiler that heats 3 large shops and they have plans to produce energy/electricity. Just under \$2 million invested so far for equipment (BET machine, buildings, waste shredder, and conveyor system). Also looking at a magnet for the front end of the feedstock feeder. Several mechanical and technical issues encountered during first year. Machine required constant monitoring and the feedstock mix. Seems to work best when MSW is combined with shredded cardboard and plastics. Batch testing only at this point; machine turned off/on every day. Manager is very hands-on and mechanical.	https://biomassenergytechniques.com/ Pilot project to turn garbage into energy – Smoky River Peace River Express (smokyriverexpress.com)
SAEWA (Southern Alberta Energy from Waste Association)	Mass burn incineration	TBD	pending	Non-profit coalition of 60 municipal entities and waste management jurisdictions in southern Alberta (created in 2009) committed to the research and implementation of energy recovery from non-recyclable waste material that will reduce the long term reliance on landfills. SAEWA continues to move forward with its project to produce energy from waste for commercial sale. Newell Regional Landfill (Brooks Region) has been identified as the preferred site for the SAEWA WTE facility. A Request for Expression is underway to officially solicit interest from technology vendor partners.	
Swan Hills	Incineration		1987	First built by the provincial Government of Alberta in 1987, the plant underwent an \$85 million expansion in 1992 to become a fully-integrated facility able to treat all forms of hazardous waste as well as their residues. The Facility has the capacity to destroy a total of 45,000 tonnes per year, through one of the two processes: incineration and physical/chemical. Government has implemented a reduced operating model, anticipating the plant closing after 2025, which is when all PCBs will have to be destroyed, which is the primary function of the plant.	Alberta decision to scale back Swan Hills waste treatment plant leads to layoffs Globalnews.ca
Sylvan Lake	Pyrolysis	Fogdog Energy and/or Northcore Energy	pending	Converting garbage into electricity by patented pyrolysis technology developed at U of C using "The Converter" that turns waste into "fluff". "All" waste streams accepted and no financing required - if Fogdog Energy meets performance measures, the Town pays an annual performance fee over ten years. The Town of Sylvan Lake has formalized plans to collaborate with Fogdog Energy Solutions Inc. in order to bring a No Landfill Disposal Facility to the community. Waiting for Alberta Environment and Parks approval.	http://fogdogenergy.com/ Sylvan Lake Project (fogdogenergy.com)
Wainwright	Incineration		Closed 2015	Built as a demonstration facility and began operations in about 1995. Had a capacity of about 9,000 tonnes of waste per year and provided steam to a canola processing plant located nearby. The plant's primary purpose was to burn biomedical waste (of which it handled 90%), although it did also burn municipal waste. This provided the revenues needed (high tipping fees) to offset the high cost of burning municipal waste when compared to local landfilling costs. The facility was closed in 2015 due to emission concerns, and is now being decommissioned due to the costs associated with retrofitting it to current standards.

RECREATION, PARKS AND COMMUNITY SUPPORT

TO:	Council	DIVISION:	4
DATE:	July 13, 2021	APPLICATION:	N/A
FILE:	N/A		
SUBJECT:	Terms of Reference for Langdon Stakeholder Advisory Group		

POLICY DIRECTION:

On June 22, 2021, Council directed Administration to return to the July 13, 2021, Council meeting with amended Terms of Reference (TOR) for the Springbank and Langdon Stakeholder Advisory Groups, and that Council submit any suggested changes to Administration by Monday, June 28, 2021.

EXECUTIVE SUMMARY:

At the June 22, 2021, Council meeting, amendments proposed to the Springbank and Langdon TOR had some similarities, but also some unique amendments based on the region. As a result, Administration chose to separate the TORs, and is presenting individual reports for both the South Springbank Facility and the Langdon Recreation Centre amended TOR.

The Langdon Recreation Centre TOR was born out of the recommendations identified in the 2021 Recreation and Parks Master Plan (RPMP). Included in the RPMP is a list of capital priorities for recreation facilities in Rocky View County, one of which is a recreation centre in Langdon. As the Langdon Recreation Centre is a short- to mid-term priority, the next step is the development of a business plan. A stakeholder advisory group consisting of Langdon community representatives will be created to provide advice on matters relating to the planning and building of the Langdon Recreation Centre.

The County, through the recommendations of the RPMP, will lead and support the planning and development of County-wide public recreation projects to achieve benefits for all residents and stakeholders.

ADMINISTRATION RECOMMENDATION:

Administration recommends approval, in accordance with Option #1.

BACKGROUND:

The Langdon Recreation Centre was identified as a high priority in both the 2020 Recreation Needs Assessment and the 2021 RPMP. The development of both documents consisted of several months of community engagement and consultation and included high-level public and stakeholder engagement, such as:

- Surveyed 2000 households;
- Collaborated with 60 direct delivery recreation providers;
- Consulted with Municipal Partners;
- Held Focus Groups with residents; and
- Held additional one-on-one consultation with residents.

In addition, continual feedback from residents was encouraged through the numerous draft phases of the RPMP.

Administration Resources

Sean Fontaine, Recreation, Parks and Community Support

In discussion with Council at their June 22, 2021, meeting, numerous amendments were proposed to the TOR. As well, Council submitted written amendments to be considered. Table 1 identifies the proposed changes for the Langdon Recreation Centre Stakeholder Advisory TOR:

Table 1: Proposed changes to the Terms of Reference

Section	Proposed Change	Action Taken	Outcome
Scope of Work; Clause #5	Define role of advisory group – consulting or advising?	Stakeholder advisory group will provide a source of input to be considered as part of the facility development assessment process by the Project Team. Other sources of information will include market analysis, capital and operational costs, and projected revenue and expenses plus a preliminary review of an operational model for the facility.	Defines the role more clearly.
Scope of Work; Clause #6	To change '3 to 4 times' throughout duration to "4 times in a two/three month time frame."	Changed to include the suggested working "4 times in a 5 month period".	Allows some flexibility for meeting schedule.
Scope of Work; Clause #6	Add projected completion time line.	Added "which is anticipated to be completed by the end of the first quarter of 2022."	Clearly defines a completion time line.
Membership	Add Division 5 Councillor.	Division 5 Councillor added.	Offers a wider electoral representation.
Membership	Remove Rocky View Schools Administration as member.	Removed.	No administration identified as members.
Membership	Add Member at Large.	Member at Large appointed by Division 4 Councillor.	Offers a diverse representation.
Membership	Add representative from the volunteer Langdon Fire Department.	Member added.	Strong volunteer stewards within Langdon.
Agendas and Meetings; Clause 12	Remove Clause 12.	Clause removed.	Allows opportunity for Advisory Group members to dialogue with community.
Agendas and Meetings; Clause 13	Add completion date time line.	Added "Estimated completion of project is first quarter of 2022."	Clearly defines a completion time line.

Section	Proposed Change	Action Taken	Outcome
PROPOSED CHANGES NOT INCLUDED			
Additional Check In Points and Further Engagement	Add additional wording to include further engagement through the process and broader consultation after business plan developed.	Not included in original scope of work.	Administration will be required to assess staff resource availability and potential budget adjustment to complete additional community engagement.
Membership	Add FCSS.	Not included.	County FCSS Coordinator will do outreach with community and compile findings for Advisory Group.

SCOPE OF WORK:

The Langdon Recreation Centre is currently within the concept phase, where preliminary models will be examined to assess viability through a development process that will expand the recommendations of the RPMP.

The Project Team, consisting of HarGroup Management Consultants and Rocky View County Administration, is assessing the development of the Langdon Recreation Centre using the facility development process. This planning tool derived from the RPMP is used to support purposeful design, coordination, and stewardship, using incremental phased practices that take projects from ideas to eventual development and opening.

The process also includes reviewing existing studies and development on the site, performing a market segment and user-based analysis, as well as completing a feasibility analysis for construction costs, projected expenses and revenues of the facility. Results from the studies will identify appropriate scale and spaces of the recreation centre with consideration for local needs, capital and operational costs of the facilities including projected revenue and expenses, and possible impact of new or expanded facilities in the surrounding areas.

The formation of this Stakeholder Advisory Group is critical within this process to provide input into these facility development projects. The Stakeholder Advisory Group will provide a source of input to be considered as part of the facility development assessment process by the Project Team. Other sources of information will include market analysis, capital and operational costs, and projected revenue and expenses.

In addition to the Stakeholder Advisory Group, the County's Family and Community Support Services Coordinator will conduct outreach with the community and our support services partners and compile the findings for the Advisory group.

MANDATE:

The Advisory Group will ensure the community has a voice throughout the process, will provide local knowledge of community desires, and will collaborate with other members of the community to ensure all voices of County residents are heard.

BUDGET IMPLICATIONS:

No budget implications within current scope of work.

If additional public information or engagement sessions are requested by Council, then Administration would need to return to Council with a report identifying resource capacity time lines, defined objectives, scope of work, and a potential budget adjustment.

OPTIONS:

- Option #1: THAT the Langdon Stakeholder Advisory Group Terms of Reference be approved in accordance with Attachment 'A'.
- Option #2: THAT alternative direction be provided.

Respectfully submitted,

Concurrence,

"Brock Beach"

"Kent Robinson"

Acting Executive Director
Community Development Services

Acting Chief Administrative Officer

SF/rp

ATTACHMENTS:

ATTACHMENT 'A': Langdon Stakeholder Advisory Group Terms of Reference

Project Background

1. The approved 2021 Recreation and Parks Master Plan (RPMP) includes a list of capital priorities for recreation facilities in Rocky View County and within the timeframe of short- to mid-term priority (1 to 10 years) is a recreation centre on the joint use site in Langdon. The Recreation Needs Assessment study (2020) identified the need for additional programmable space as a short term priority in SE portion of the County.
2. The County, through the recommendations of the RPMP, will lead and support the planning and development of County-wide public recreation projects and initiatives to achieve benefits for all residents and stakeholders.
3. Within the process, the formation of a Stakeholder Advisory Group, to provide input into the facility development project, is critical. The Langdon Advisory Group is being established to advise on the development of the proposed Langdon Recreation Centre.

Scope of work

4. The Langdon Stakeholder Advisory Group will be established to provide input to the Project Team (which involves Rocky View County Administration and HarGroup Consultants) on matters relating to the planning and building of a recreation centre in Langdon.
5. The Stakeholder Advisory Group will provide a source of input to be considered as part of the facility development assessment process by the Project Team. Other sources of information will include Market analysis, Capital and operational costs, and projected Revenue and expenses, plus a preliminary review of an operational model for the facility.
6. The Stakeholder Advisory Group will meet 3 to 4 times during the duration of the Facility Development Assessment phase, which is anticipated to be completed by the first quarter of 2022.

Mandate

7. The Stakeholder Advisory Group will provide advice and input to be considered by the Project Team in the following areas:
 - (1) Ensure that the community has a voice throughout the Facility Development Process.
 - (2) Provide advice and input into the recreation amenities and spaces that could be beneficial for the new facility.
 - (3) Provide local knowledge of desires in the community.

Terms of Reference

- (4) Collaborate with other members of the community to ensure that all voices of the Rocky View residents are heard.

Membership

8. The Stakeholder Advisory Group consists of the following:
 - (1) The Rocky View County Councillor representing Division 4;
 - (2) The Rocky View County Councillor representing Division 5;
 - (3) The Rocky View Schools Trustee representing the division where the project is located, where possible;
 - (4) A representative from the volunteer Langdon Fire Department;
 - (5) A representative be appointed by the County's Division 4 Councillor;
 - (6) A representative from the Langdon Community Association;
 - (7) A representative from the Bow Valley Agricultural Society;
 - (8) A representative from the Langdon Library Society;
 - (9) A representative from the Langdon Community Collaborative; and
 - (10) A representative from the Langdon O.K. Seniors.

Agendas and Meetings

9. Rocky View County Administration will coordinate agendas as required.
10. The Stakeholder Advisory Group is intended to meet at predetermined dates during the duration of the project.
11. The number of meetings as well as the approximate dates and the locations of the meetings will be established by the Project Team before the Committee's first meeting.
12. The Project team will provide regular updates to the Stakeholder Advisory Group throughout the duration of the project, when required.
13. The Stakeholder Advisory Group will dissolve upon completion of the Langdon Recreation Centre Facility Development Assessment project. Estimated completion of project is first quarter of 2022.

RECREATION, PARKS AND COMMUNITY SUPPORT

TO: Council

DATE: July 13, 2021 **DIVISION:** 2

FILE: N/A **APPLICATION:** N/A

SUBJECT: Terms of Reference for South Springbank Facility Stakeholder Advisory Group

POLICY DIRECTION:

On June 22, 2021, Council directed Administration to return to the July 13, 2021 Council meeting with amended Terms of Reference (TOR) for the Springbank and Langdon Stakeholder Advisory Groups and that Council submit any suggested changes to Administration by Monday, June 28, 2021.

EXECUTIVE SUMMARY:

At the June 22, 2021, Council meeting, amendments proposed to the Springbank and Langdon TOR had some similarities, but also some unique amendments based on the region. As a result, Administration has chosen to separate the TORs and is presenting individual reports for both the South Springbank Facility and the Langdon Recreation Centre amended TOR.

The 2020 Recreation Needs Assessment study identified the need for additional programmable space as a short-term priority in the SW area of the County. The approved 2021 Recreation and Parks Master Plan (RPMP) includes a list of short to mid-term capital priorities for recreation facilities in Rocky View County, one of which is a facility in south Springbank. With the decommissioning of the community hall in 2015, new program and meeting spaces are needed within the community and surrounding areas to compensate for the loss of space.

As a result, County Administration will be embarking on a business plan for this facility. As part of the process, a Stakeholder Advisory Group (Advisory Group) consisting of Springbank residents will be created to provide advice on matters relating to the planning and building of a South Springbank Facility.

The County, through the recommendations of the RPMP, will lead and support the planning and development of County-wide public recreation projects to achieve benefits for all residents and stakeholders.

ADMINISTRATION RECOMMENDATION:

Administration recommends approval, in accordance with Option #1.

BACKGROUND:

The South Springbank Facility was identified as a high priority in both the 2020 Recreation Needs Assessment and the 2021 RPMP. The development of both documents consisted of several months of community engagement and consultation and included high-level public and stakeholder engagement, such as:

- Surveyed 2000 households;
- Collaborated with 60 direct delivery recreation providers;
- Consulted with Municipal Partners;
- Held Focus Groups with residents; and
- Held additional one-on-one consultations with residents.

Administration Resources

Amber Smith, Recreation, Parks and Community Support

In addition, continual feedback from residents was encouraged through the numerous draft phases of the RPMP.

Prior to the publication of the Recreation Needs Assessment and the 2021 RPMP, the Springbank Community Association commissioned a Market and Economic Feasibility Study for a future "Community, Recreation and Events Centre" in south Springbank, and unfortunately, the document was never completed. However, the work that was done to date will be assessed against the strategic management framework process that is the key planning tool recommended within the RPMP to support purposeful design, coordination, and stewardship in the development of facilities.

In discussion with Council at their June 22, 2021 meeting, numerous amendments were proposed to the terms of reference for both Springbank and Langdon. As well, Council submitted written amendments to be considered. Table 1 identifies the proposed changes for the South Springbank Facility Stakeholder Advisory Terms of Reference.

Table 1: Proposed changes to the Terms of Reference

Section	Proposed Change	Action Taken	Outcome
Full Document	Replace the words "Springbank Community Centre" with "Springbank Facility".	Springbank Community Centre replaced with South Springbank Facility.	To create language that does not have a pre-conceived outcome as a typical community centre.
Scope of Work; Clause #5	Stakeholder Advisory Group will provide a source of input to be considered as part of the facility development assessment process by the Project Team. Other sources of information will include market analysis, capital and operational costs, and projected revenue and expenses, plus a preliminary review of an operational model for the facility.	Inserted changes to provide more clarity on advisory group's role within the project, content specific project.	Defines the role more clearly.
Scope of Work; Clause #6	To change '3 to 4 times' throughout duration to "4 times in a two/three month time frame."	Changed to include 4 times in a five month period.	Allows some flexibility for meeting schedule.
Scope of Work; Clause #6	Add projected completion time line.	Added "which is anticipated to be completed by the end of the first quarter of 2022."	Clearly defines a completion time line.
Membership	Add Division 3 Councillor.	Division 3 Councillor added.	Offers a wider electoral representation.
Membership	Remove Rocky View Schools Administration as member.	Removed.	No administration identified as members.
Membership	Add Member at Large.	Member at Large appointed by Division 2 Councillor.	Offers a diverse representation.

Section	Proposed Change	Action Taken	Outcome
Membership	Add Member at Large.	Member at Large appointed by Division 3 Councillor.	Offers a diverse representation.
Membership	Remove reference to Cochrane FCSS.	Removed as member.	County FCSS Coordinator will do outreach with community and compile findings for Advisory Group.
Agendas and Meetings; Clause 12	Remove Clause 12.	Clause removed.	Allows opportunity for Advisory Group members to dialogue with community.
Agendas and Meetings; Clause 13	Add completion date time line.	Added "Estimated completion of project is first quarter of 2022."	Clearly defines a completion time line.
PROPOSED CHANGES NOT INCLUDED			
Membership	Add member from Springbank Fire Hall.	Springbank Fire Hall members are paid staff.	Springbank Fire Hall members are not volunteer based as is with Langdon Fire Hall members.
Additional Check In Points and Further Engagement	Add additional wording to include further engagement through the process and broader consultation after business plans developed.	Not included in original scope of work.	Admin will be required to assess staff resource availability and potential budget adjustment to complete additional community engagement.

SCOPE OF WORK:

The Springbank Stakeholder Advisory group will be established to provide input to the Project Team, consisting of Rocky View County Administration and HarGroup Consultants, on matters relating to the planning and building of the South Springbank Facility. The project is currently within the initiation phase, which is slightly different then the concept phase identified for the Langdon Recreation Centre. The initiation phase starts with a clean slate and no perceived uses or spaces. Work previously completed, such as the feasibility study conducted by the Springbank Association, will be assessed, while also giving considerations for current proposed projects such as the Springbank Heritage Club's expansion.

The Stakeholder Advisory group will provide a source of input to be considered as part of the facility development assessment process by the Project Team. Other sources of information will include market analysis, capital and operational costs, and projected revenues and expenses. Also, risks and opportunities for future partnerships within the region will also be explored to ensure possible impacts of new or expanded existing facilities are identified.

In addition to the Stakeholder Advisory Group, the County's Family and Community Support Services Coordinator will conduct outreach with the community and our support services partners and compile the findings for the Advisory Group.

MANDATE:

The Advisory Group will ensure the community has a voice throughout the process, will provide local knowledge of community desires, and will collaborate with other members of the community to ensure all voices of County residents are heard.

BUDGET IMPLICATIONS:

No budget implications within current scope of work.

If additional public information or engagement sessions are requested by Council, then Administration would need to return to Council with a report identifying resource capacity time lines, defined objectives, scope of work and a potential budget adjustment.

OPTIONS:

Option #1: THAT the South Springbank Facility Stakeholder Advisory Group Terms of Reference be approved in accordance with Attachment 'A'.

Option #2: THAT alternative direction be provided.

Respectfully submitted,

Concurrence,

"Brock Beach"

"Kent Robinson"

Acting Executive Director
Community Development Services

Acting Chief Administrative Officer

ATTACHMENT 'A': South Springbank Facility Stakeholder Advisory Group Terms of Reference

ROCKY VIEW COUNTY

South Springbank Facility Stakeholder Advisory Group Terms of Reference

Project Background

- 1 The approved 2021 Recreation and Parks Master Plan (RPMP) includes a list of capital priorities for recreation facilities in Rocky View County and within the timeframe of short- to mid-term priority (1 to 10 years) is the South Springbank facility. The Recreation Needs Assessment study (2020) identified the need for additional programmable space as a short term priority in the SW area of the County. Since the decommissioning of the community hall in 2015, new program and meeting spaces are needed within the community and surrounding areas to compensate for the loss of the building.
- 2 The County, through the recommendations of the RPMP, will lead and support the planning and development of County-wide public recreation projects and initiatives to achieve benefits for all residents and stakeholders.
- 3 Within the process, the formation of a Stakeholder Advisory Group, to provide input into the facility development project, is critical. The Springbank Advisory Group is being established to advise on the development of the proposed South Springbank Facility.

Scope of work

- 4 The Stakeholder Advisory Group will be established to provide input to the Project Team (which involves Rocky View County Administration and HarGroup Consultants) on matters relating to the planning and building of a facility in the south Springbank.
- 5 The Stakeholder Advisory Group will provide a source of input to be considered as part of the facility development assessment process by the Project Team. Other sources of information will include market analysis, capital and operational costs, and projected revenue and expenses, plus a preliminary review of an operational model for the facility.
- 6 The Stakeholder Advisory Group will meet 3 to 4 times within a two to three month time frame. The project is anticipated to be completed by the end of the fourth quarter of 2021.

Mandate

- 7 The Stakeholder Advisory Group will provide advice and input to be considered by the Project Team in the following areas:
 - (1) Ensure that the community has a voice throughout the Facility Development Process.
 - (2) Provide advice and input into the recreation amenities and spaces that could be beneficial for the new facility.
 - (3) Provide local knowledge of desires in the community.

ROCKY VIEW COUNTY

South Springbank Facility Stakeholder Advisory Group Terms of Reference

-
- (4) Collaborate with other members of the community to ensure that all voices of the Rocky View residents are heard.

Membership

- 8 The Stakeholder Advisory Group consists of the following:
- (1) The Rocky View County Councillor from Division 2;
 - (2) The Rocky View County Councillor from Division 3;
 - (3) The Rocky View Schools Trustee representing the division where the project is located, where possible;
 - (4) A representative from the Springbank Community Association;
 - (5) A representative from the Springbank Heritage Club;
 - (6) A representative from the Springbank Park for All Seasons;
 - (7) A representative be appointed by the County's Division 2 Councillor, and;
 - (8) A representative be appointed by the County's Division 3 Councillor

Agendas and Meetings

- 9 Rocky View County Administration will coordinate agendas as required.
- 10 The Stakeholder Advisory Group is intended to meet at predetermined dates during the duration of the project.
- 11 The number of meetings as well as the approximate dates and the locations of the meetings will be established by the Project Team before the Committee's first meeting.
- 12 The Project team will provide regular updates to the Stakeholder Advisory Group throughout the duration of the project, when required.
- 13 The Stakeholder Advisory Group will dissolve upon completion of the Springbank Facility Development Assessment project. Estimated completion of project is last quarter of 2021.

LEGISLATIVE SERVICES

TO: Council
DATE: July 13, 2021
FILE: N/A
SUBJECT: Development Cooperation MOU between the Village of Beiseker and Rocky View County

DIVISION: All
APPLICATION: N/A

POLICY DIRECTION:

On December 5, 2019, Bill 25 amended the *Municipal Government Act* (MGA) and provided municipalities with the option to opt-out of the requirement to complete an Intermunicipal Development Plan, if both Councils agreed.

EXECUTIVE SUMMARY:

At the October 15, 2020, Intermunicipal Committee (IMC) meeting, Administrations were directed to pursue a development-related memorandum of understanding (MOU) rather than an Intermunicipal Development Plan. A Council resolution confirming this direction was passed on March 9, 2021.

The area in Rocky View County adjacent to Beiseker is primarily zoned for agriculture. The Intermunicipal Collaboration Framework, passed by Council on February 24, 2020, provides a mechanism for discussion and dispute resolution, and also identifies shared services.

At the direction of IMC, Administration drafted a MOU with counterparts from Beiseker to further strengthen collaboration on development-related issues. The MOU outlines communication, dispute resolution and development circulation protocols. It contains a section on mitigating intermunicipal impacts, which concerns stormwater issues, tax-sharing arrangements and commits the County to encouraging nearby development to locate within the Village.

The MOU was reviewed and approved in principle by IMC on May 20, 2021, and has received a legal review. Minor changes arising from the legal review were agreed upon with Village Administration. It is Administration's assessment that this MOU will strengthen cooperation between the municipalities, and that there are minimal risks associated with adopting the MOU. The Village will be bringing this agreement to their Council for ratification on July 4, 2021.

ADMINISTRATION RECOMMENDATION:

Administration recommends approval in accordance with Option #1.

BUDGET IMPLICATIONS:

There are no budget implications at this time.

OPTIONS:

- Option #1 THAT the Development Cooperation Memorandum of Understanding between Rocky View County and the Village of Beiseker (Attachment 'A') be approved.
- Option #2 THAT alternative direction be provided.

Administration Resources

Acting Chief Administrative Officer

ATTACHMENT: Attachment ‘A’ – Development Cooperation MOU between Village of Beiseker and Rocky View County

THIS MEMORANDUM OF UNDERSTANDING executed this ____ day of _____, 2021
(hereinafter referred to as the “MOU”)

BETWEEN

ROCKY VIEW COUNTY
(hereinafter referred to as the “County”)

AND

THE VILLAGE OF BEISEKER
(hereinafter referred to as the “Village”)

MEMORANDUM OF UNDERSTANDING

WHEREAS:

- A. The Municipalities are municipal corporations under the *Municipal Government Act*;
- B. The Municipalities share a common boundary;
- C. The Municipalities wish to affirm the importance of and strengthen their intergovernmental relationship;
- D. The Municipalities have entered into an Intermunicipal Collaboration Framework to govern shared servicing arrangements;
- E. The Municipalities have reviewed their common interests and wish to work together when appropriate to direct development to the most efficient and mutually beneficial outcomes.

NOW THEREFORE THE PARTIES AGREE AS FOLLOWS:

1. Purpose

- 1.1. The purpose of this MOU is to affirm the intergovernmental relationship between the Municipalities and strengthen the process for working together to ensure that

development near their common boundary is carried out in a mutually beneficial and efficient manner.

2. Definitions

- 2.1. "CAO" means the Chief Administrative Officer or acting CAO of each Municipality.
- 2.2. "Council" means the elected council of each Municipality or the Municipalities, as the context may so require.
- 2.3 "Effective Date" means the later of the dates on which resolutions of both Councils approving this MOU are passed (if applicable), or the date that this MOU is fully executed and delivered by each Municipality.
- 2.4. "Intermunicipal Collaboration Framework" means the Intermunicipal Collaboration Framework between the Village of Beiseker and Rocky View County, as required under Part 17.2 of the *Municipal Government Act*, as amended from time to time.
- 2.5. "Intermunicipal Committee" means the Intermunicipal Committee formed by the Village and the County pursuant to the provisions of the Intermunicipal Collaboration Framework, which consists of elected and Administration officials, and which meets twice annually.
- 2.6. "Local Plans" means conceptual schemes and master site development plans.
- 2.7. "MOU" means this Memorandum of Understanding, as amended from time to time.
- 2.8 "*Municipal Government Act*" means the *Municipal Government Act*, RSA 2000, c M-26, and all regulations established thereunder, as amended from time to time.
- 2.9 "Municipalities" means, collectively, the County and the Village, and "Municipality" means either one of them.

3. Principles of Cooperation

- 3.1. The Municipalities are committed to fostering intermunicipal cooperation in a non-adversarial, informal, and cost-effective manner.
- 3.2. The Municipalities are committed to open communication to determine the most efficient and mutually beneficial pattern of development along their common boundary.

4. Term and Review

- 4.1. This MOU shall come into effect on the Effective Date and shall remain in effect for a term of five years.
- 4.2. As soon as reasonably possible after a Municipality has adopted this MOU by resolution (if applicable) and executed this MOU to the other Municipality, that

Municipality's CAO shall provide written notice to the other Municipality's CAO confirming the date of final adoption.

4.3. The Municipalities shall review the terms and conditions of this MOU through the Intermunicipal Committee by no later than the four year anniversary of the Effective Date.

4.4. After the four year review is completed, the Municipalities may renew the MOU by matching Council resolutions, or terminate the MOU as they deem appropriate.

4.5. This MOU may be terminated by either Municipality providing 90 days' notice to the other Municipality in writing.

5. Communication

5.1. Each Municipality's CAO will communicate with each other in a timely manner any items that might be of significance for this MOU.

5.2. Notice under this MOU shall be provided in writing to the mailing address or email address of each respective Municipality, addressed to the attention of the CAO, and provided in the manner set forth within the Intermunicipal Collaboration Framework.

5.3. Regular meetings between the Municipalities' elected officials shall occur at least once annually through the Intermunicipal Committee.

6. Circulation and Referrals

6.1. The Municipalities shall refer the following development plans and proposals within the prescribed distance set forth within Section 6.2 to each other, and shall endeavour to address any concerns raised by the other party:

6.1.1. Proposed statutory plans, local plans, and any amendments thereto;

6.1.2. Applications for land use redesignation and subdivision that result in the creation of more than three (3) new residential lots;

6.1.3. Proposed road closures and disposition of municipal and/or school reserves and public utility lots; and

6.1.4. Development permit applications for natural resource extraction, landfills, land uses along the intermunicipal entranceways, commercial or industrial development, and institutional uses and services.

6.2. The County shall refer circulations arising from clause 6.1 within 1.6 km of the Municipalities' common boundary to the Village, and the Village shall refer circulations arising from clause 6.1 within 500m of the Municipalities' common boundary to the County.

6.3. Unless otherwise agreed to by both Municipalities, the responding Municipality shall have twenty (20) days from date of receipt to respond to development permits, and thirty (30) days from date of receipt to reply to any other intermunicipal circulation.

6.4. For greater clarity, unless otherwise required by the provisions of the *Municipal Government Act*, adjacent landowners will be circulated in accordance with the provisions of Section 692(4) to (7) of the *Municipal Government Act*.

7. Mitigating Intermunicipal Impacts

7.1. The Municipalities shall continue to cooperate on issues that may arise from land use patterns and should seek to mitigate any adverse impacts on the other Municipality.

7.2. The Municipalities shall continue to cooperate on issues relating to stormwater management.

7.3. The Municipalities affirm the importance of the Tax Revenue Sharing Agreement for the Beiseker Airport.

7.4. The County shall encourage development near the Municipalities' common boundary to take place within the boundaries of the Village. If development occurs in the County within 1.6 km of the common boundary, the County shall examine opportunities for net revenue-sharing with the Village.

7.5. The Municipalities shall not support confined feeding operations within 1.6 km of the Municipalities' common boundary.

8. General Provisions

8.1. This MOU does not in any way fetter, limit, or restrict the legislative jurisdiction of the respective Councils, nor does it commit a Municipality to any obligation not specifically set out herein.

8.2. This MOU does not create any rights or legal obligations between the Municipalities:

8.2.1 that would be in any way contrary to or in conflict with any limitation, obligation, or requirement under the *Municipal Government Act*, or any legislative jurisdiction of the respective Councils; and

8.2.2 that would be greater than a level of commitment and/or performance of merely the good faith and municipal best efforts with respect to any stated intention, obligation, or requirement contemplated within this MOU.

8.3 To the extent that any such contrary requirement or conflict exists between the provisions of this MOU and any limitation, obligation, or requirement under the *Municipal Government Act*, or any legislative jurisdiction of the respective Councils, the Municipalities acknowledge and agree that:

8.3.1 the requirements of the limitation, obligation, or requirement under the *Municipal Government Act*, or the requirements of the legislative jurisdiction of the respective Councils, will prevail;

8.3.2 the Municipalities, through the Intermunicipal Committee, shall meet as soon as reasonably practicable in order to address the conflict, with a view to

finding a solution that as much as possible honours and facilitates the intentions of the Municipalities as reflected within this MOU; and

8.3.3 to the extent that any such conflict is not resolved to the reasonable satisfaction of either Municipality, the matters in dispute may be referred by either Municipality so as to be resolved through the dispute resolution process outlined in the Intermunicipal Collaboration Framework.

8.4 Nothing within this MOU shall be interpreted as an amendment to or replacement of any existing or future Tax Revenue Sharing Agreement between the Municipalities respecting the Beiseker Airport and related lands or developments.

8.5 Any dispute between the Municipalities with respect to this MOU shall follow the dispute resolution process outlined in the Intermunicipal Collaboration Framework.

IN WITNESS WHEREOF, the Municipalities have hereunto executed this Framework by the hands of their proper officers duly authorized in that regard.

CAPITAL PROJECT MANAGEMENT

TO:	Council	
DATE:	July 13, 2021	DIVISION: 1
FILE:	4003-100	APPLICATION: N/A
SUBJECT:	Budget Adjustment - Bridge File 72994 – West Bragg Creek Bridge	

EXECUTIVE SUMMARY:

Administration is requesting a budget adjustment of \$320,000 in order to proceed with the replacement of Bridge File 72994 along West Bragg Creek Road as identified in the 2021 Capital Budget.

ADMINISTRATION RECOMMENDATION:

Administration recommends approval in accordance with Option #1.

BACKGROUND:

Bridge File 72994 along West Bragg Creek Road was approved in the 2021 Capital Budget with a budget of \$1,350,000. This project involves a full replacement of a two span bridge over Bragg Creek along Township Road 232 and encompasses a pedestrian walkway which is being funded in partnership with the Bragg Creek Trails Association.

A competitive bid process was undertaken to obtain pricing for construction which included both a contractor pre-qualification and invitation to tender. Two competitive bids were submitted by contractors for the bridge replacement and both came in over the project budget. The County's consultant has provided a variance analysis on the pricing and the variance cannot be attributed to a single factor; however is primarily attributed to market conditions and current challenges with supply chains and material shortage.

Construction timing is critical for this project as the in-stream work in Bragg Creek must be executed outside of the Restricted Activity Period (RAP) which aligns with the last two weeks of August.

Administration requests an additional \$320,000 budget in order to proceed with the replacement of the bridge to be funded out of the Transportation Off-site Levy.

BUDGET IMPLICATIONS:

An additional \$320,000 is requested to complete the project and is proposed to be funded through the Transportation Off-site Levy.

STRATEGIC OBJECTIVES:

Council's support of this budget adjustment would align with the County's Strategic Theme of Service Excellence.

TRANSPORTATION SERVICES

TO:	Council	
DATE:	July 13, 2021	DIVISION: 8
FILE:	N/A	APPLICATION: N/A
SUBJECT:	Neighbours Against High Water (NAHW) – Pumping Cost Recovery	

EXECUTIVE SUMMARY:

At the December 1, 2020 Special Council Meeting, Administration was directed to continue to work with Neighbours Against High Water (NAHW) on the potential cost recovery solutions to high water in the Bearspaw area, with an update provided at the March 23, 2021 meeting of Council.

ADMINISTRATION RECOMMENDATION:

Administration recommends approval in accordance with Option #1.

BACKGROUND:

Administration continues to communicate and collaborate with NAHW and the Bearspaw Golf and Country Club (BGC) on developing a cost recovery process to pump water from the roadside ditch near 46 Bearspaw View to ponds on the golf course. Seasonal needs result in the BGC purchasing water for irrigation purposes and the goal is to reduce water levels impacting private property with cost recovery potential.

The process required to complete the work is outside of current Council Policy C-454 Flood Response and the approved 2021 Operating Budget. In association with the approved Council motion, Administration has been striving for 100% cost recovery to complete the pumping works, a pumping rate of \$1 per cubic metre needs to be recovered. The BGC has agreed to contribute \$0.40 which results in an unfunded cost of \$0.60 per cubic metre. Based on the offer, Administration felt Council should review the offer and determine if it is acceptable. With Council acceptance of the offer, the Budget Adjustment (Attachment 'C') would need to be approved. The Budget Adjustment reflects County costs associated with pumping up to 60,000 m³ of water from the Bearspaw Area (NAHW).

The County will be required to submit a Water Act application to Alberta Environment and Parks (EAP) to divert the surface water. We may also be required to collect water samples for testing. Further EAP may require the BGC to submit a Temporary Diversion License for the purpose of using surface water for irrigation.

Should Council not accept the offer and require 100% cost recovery to perform the pumping, Administration will continue negotiations with the BGC and the NAHW so that all costs are recovered for the pumping.

BUDGET IMPLICATIONS:

\$36,000 to be transferred from the Tax Stabilization Reserve and \$24,000 recovery from Bearspaw Golf Course.

Administration Resources

Steven Hulsman, Transportation Services

STRATEGIC OBJECTIVES:

Collaboration with NAWW on potential cost recovery solutions to high water in the Bearspaw area aligns with Council's Strategic Objectives to *create a culture of customer service* by reducing the negative impact of high water levels impacting NAWW.

Collaborating with NAWW and third parties to negate impacts of high water while reducing costs would also align with the strategic objective as *Embracing Partnerships*.

OPTIONS:

- Option #1: Motion 1 THAT the offer from the Bearspaw Golf and Country Club of \$0.40/cubic metre to offset the County's water pumping costs be accepted.
- Motion 2 THAT the Budget Adjustment for Neighbours Against High Water (NAHW) – Pumping Cost Recovery be approved in Accordance with Attachment 'C'
- Option #2: THAT the Neighbours Against High Water (NAHW) update report be received as information.
- Option #3 THAT alternative direction be provided.

Respectfully submitted,

Concurrence,

"Byron Riemann"

"Kent Robinson"

From: Kyle Lund <Kyle.Lund@gov.ab.ca>
Sent: June 16, 2021 12:25 PM
To: Gord Rowland <growland@rockyview.ca>
Subject: RE: [EXTERNAL] - TDL Application No. 00475941

Good afternoon Gord,

Based on the information provided within the application and your email, it appears the primary purpose of the application is for dewatering / flood control, which cannot be authorized through a temporary diversion licence. Since we last communicated, I've been able to speak with my colleagues regarding this application and I can present the following options moving forward:

1. Rocky View County can apply for an approval under the provisions of the *Water Act* to dewater the Bearspaw lands in question to the Bearspaw Golf Course; however, the Bearspaw Golf Course would be required to obtain a TDL for the purpose of irrigation (since they do not hold any active licences under the Act for this purpose). Be advised, this path forward is only being offered if it is for a temporary purpose (ie. this season only). If both parties are seeking to make this a long-term solution for the area, the Bearspaw Golf Course would be required to obtain a term-licence for the diversion of surface water under the Act.

OR

2. Rocky View County can apply for an approval under the provisions of the *Water Act* to dewater the Bearspaw lands in question and divert the water to "Option 2" as identified on the map supplied within the application (attached). Be advised, if the County chooses this path forward they would be required to submit the consent from any affected parties upstream of the Bow River. In other words, if the released water flows through Alberta Transportation culverts (underneath HWY 1A) or enters any City of Calgary storm ponds (prior to entering the Bow River), consent would be required from those entities.

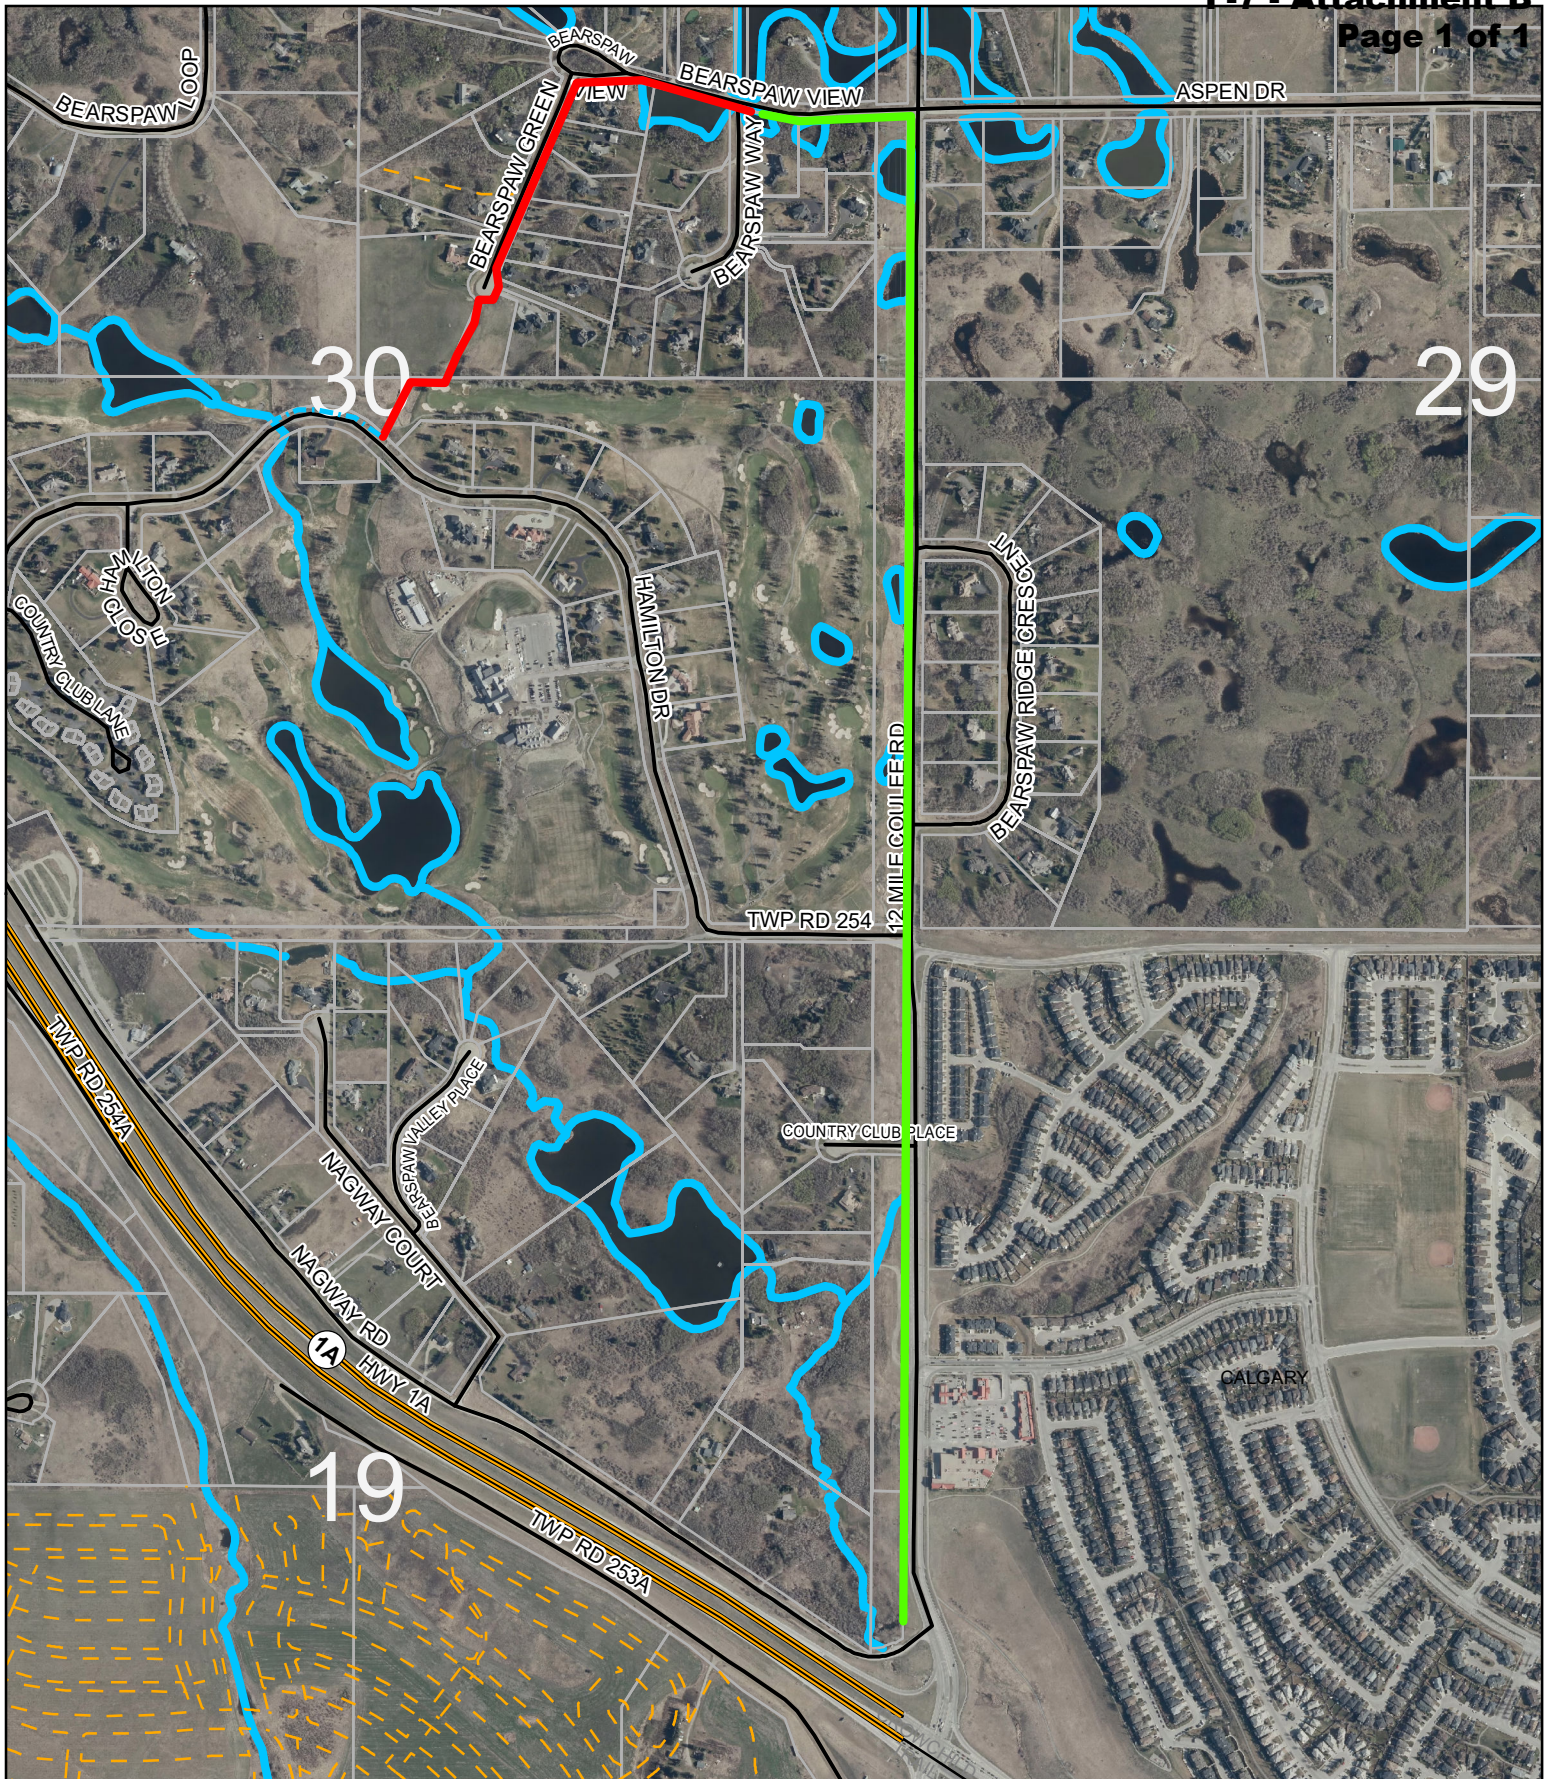

Please let me know if you have any questions or concerns; however, at this time the existing TDL application (No. 00475941) will be returned to the Applicant.

FLOOD RESPONSE

Council Policy

C-454

Policy Number:	C-454
Policy Owner:	Transportation Services
Adopted By:	Council
Adoption Date:	2012 January 24
Effective Date:	2012 January 24
Date Last Amended:	2019 November 26
Date Last Reviewed:	2019 November 20

Purpose

- 1 This policy establishes an order of priority, criteria, and budgeting process for flooding concerns reported by residents and commercial businesses.

Policy Statement

- 2 It is the County's responsibility to respond to all flooding concerns with consistency and equitability. Furthermore, it is the intent of the policy to remedy situations where County property has directly resulted with flooding to the property of concern.
- 3 The County recognizes its responsibility to provide a level of service based on a system of priority that is consistent and equitable for all residents and commercial businesses.

Policy

- 4 Imminent flooding concerns have priority over potential flooding concerns.
- 5 All reported flooding concerns go through a formal review and documented process to allow the County to pre-screen flooding concerns based on the following priority criteria from most imminent to least potential flooding concerns:
 - (1) public health and safety;
 - (2) impact to county infrastructure;
 - (3) damage to private property as a direct result of County property;

FLOOD RESPONSE

Council Policy

C-454

- (4) loss of business;
- (5) damage to private property not a direct result of County property.
- 6 The County may utilize road ditches for storage or conveyance to temporarily alleviate a flooding concern when there is no evidence of downstream impacts to other properties or environmental contamination, such as from a flooded septic field, gasoline, diesel, etc.
- 7 The County uses the Flooding Response Guide adopted by Council on October 2, 2007, as a framework to develop a Flooding Action Plan (Procedure).
- 8 The County adheres to provincial and federal environmental regulations when responding to a flooding concern.
- 9 The County adheres to its safety policies, and occupational health and safety regulations, when responding to a flooding concern.

Policy History

Amendment Date(s) – Amendment Description

- 2019 November 26 – Council amended to align with current County practices and new policy standards

Review Date(s) – Review Outcome Description

- 2019 November 20 – Minor changes recommended to reflect County processes and standards

Definitions

10 In this policy:

- (1) “Council” means the duly elected Council of Rocky View County;

FLOOD RESPONSE

Council Policy

C-454

- (2) "County" means Rocky View County;
- (3) "County property" means property owned or under Rocky View County's jurisdiction, a road allowance by legal survey and statutory road allowance that include carriageway and ditch system, a freehold property titled to the County, and environmental reserve and municipal reserve as defined in the *Municipal Government Act*;
- (4) "flooding" means the covering or submerging of normally dry land with a large amount of water;
- (5) "imminent flooding concerns" means when flooding or damage associated with flooding has occurred or has a significant probability of occurring within 24 hours;
- (6) "*Municipal Government Act*" means the Province of Alberta's *Municipal Government Act*, RSA 2000, c M-26, as amended or replaced from time to time;
- (7) "potential flooding concern" means an abnormal condition is observed or identified, or a significant rainfall is forecasted, which, without intervention, may lead to flooding or damage;
- (8) "road ditch" means a conveyance or storage of snow or storm water within a ditch system of a road allowance; and
- (9) "Rocky View County" means Rocky View County as a municipal corporation and the geographical area within its jurisdictional boundaries, as the context requires.
